Shell-like Structures Holm Altenbach, Victor A. Eremeyev, 2011-07-03. In this volume scientists and researchers from industry discuss the new trends in simulation and computing shell like structures. The focus is put on the following problems: new theories based on two dimensional field equations but describing non classical effects; new constitutive equations for materials like sandwiches foams etc and which can be combined with the two dimensional shell equations; complex structures folded branching and or self intersecting shell structures etc and shell like structures on different scales for example nano tubes or very thin structures similar to membranes but having a compression stiffness. In addition phase transitions in shells and refined shell thermodynamics are discussed. The chapters of this book are the most

Non-Classical Problems in the Theory of Elastic Stability Isaac Elishakoff, Yiwei Li, James H. Starnes, 2001-01-29 When a structure is put under an increasing compressive load it becomes unstable and buckling occurs Buckling is a particularly significant concern in designing shell structures such as aircraft automobiles ships or bridges This book discusses stability analysis and buckling problems and offers practical tools for dealing with uncertainties that exist in real systems The techniques are based on two complementary theories which are developed in the text First the probabilistic theory of stability is presented with particular emphasis on reliability Both theoretical and computational issues are discussed Secondly the authors present the alternative to probability based on the notion of anti optimization a theory that is valid when the necessary information for probabilistic analysis is absent that is when only scant data are available Design
