**Shell Model and Nuclear Structure** Aldo Covello, 1989      Understanding The Variety Of Nuclear Excitations - Proceedings Of The 3rd International Spring Seminar On Nuclear Physics Aldo Covello, 1991-03-15 The primary emphasis of the Seminar is on the modes of excitation in both spherical and deformed nuclei Several topics at the forefront of current research in nuclear structure are covered by leading physicists The main themes are Single particle and Collective Degrees of Freedom in Low energy Modes of Excitation The Nature of High spin States in Deformed and Spherical Nuclei and The Role of Giant Resonances in Nuclear Structure      Collective Motion and Phase Transitions in Nuclear Systems A. A. Raduta, V. Baran, A C Gheorghe, 2007 This volume contains the invited contributions that were presented at the Predeal International Summer School in Nuclear Physics 2006 It covers the recent achievements in the fields of nuclear structure double beta decay nuclear multifragmentation kaon and dilepton production in heavy ion collisions and the quark gluon plasma The treatment is both theoretical and experimental with emphasis on the collective aspects and related phase transitions The papers are authored by many leading researchers in the field      *Perspectives In Nuclear Physics - Proceedings Of The International Conf* Joseph H Hamilton, H K Carter, R B Piercey, 1999-08-30 This book provides an overview of the current research and future prospects in a variety of important areas in nuclear physics by leaders in their respective areas Advances in both theory and experiments are covered The topics included new insights into the fission process and the use of fission in the characterization of nuclear fuel waste High spin spectroscopy studies of both proton and neutron rich nuclei are described New and emerging areas covered include relativistic heavy ion physics at RHIC as it turns on in 1999 to new opportunities with radioactive ion beams at several laboratories to prospects for new neutrino studies with the high intensity 1 GeV proton beam from the Spallation Neutron source when it is completed in 2005 A major part of this book includes current and future research with stable and radioactive ion beams at the Holifield RIB facility and the performance and first results with the new generation recoil mass spectrometer at Holifield      The Nuclear Shell Model Tsung-Shung Harry Lee, Robert Bruce Wiringa, 1990      **New Trends In Theoretical And Experimental Nuclear Physics - Proceedings Of The Predeal International Summer School** Apolodor A Raduta, D S Delion, Ioan I Ursu, 1992-04-27

**From Nuclei and Their Constituents to Stars** A. Molinari, L. Riccati, W.M. Alberico, 2003-07-31 This book focuses on the ideas to embed nuclear physics in the larger context of hadronic physics by stressing and deepening its widening overlap with particle astroparticle and condensed matter physics and to emphasize the unity of the two facets not only of nuclear but of the whole physics the theoretical and the experimental ones Counteracting the ominous trend of enlarging the gap between the two the danger being of depriving experimental physics of ideas promoting experiments and of transforming theoretical physics into metaphysics The reader will find modern conceptions on nuclear structure how atomic nuclei are probed through the scattering of high energy electrons and how they interact when accelerated at ultra relativistic energies

unique book takes a newcomer from an introduction to nuclear structure physics to the frontiers of the subject along a painless path. It provides both the experimental and mathematical foundations of the essential models in a way that is accessible to a broad range of experimental and theoretical physicists. Thus the book provides a unique resource and an exposition of the essential principles, mathematical structures, assumptions, and observational data on which the models and theories are based. It avoids discussion of many non-essential variations and technical details of the models.

Klepper, 1984      **Acta Physica Polonica**, 2004      **Proceedings of the Eleventh International Symposium Capture Gamma-Ray Spectroscopy and Related Topics** Pavel Cejnar, Jan Kvasil, Milan Krtić, 2003. This volume is a collection of invited talks, oral contributions, and poster contributions devoted to advances in gamma-ray spectroscopy of various capture reactions. In agreement with the trend of previous meetings in the series, the symposium paid special attention to theoretical and experimental studies of nuclear structure at low energies and to nuclear astrophysics. Among the other topics covered are statistical properties of nuclei and other quantum many-body systems, fundamental physics, nuclear data, practical application of capture reactions, and new techniques and facilities for capture gamma-ray spectroscopy.

Contents: Nuclear Structure, Nuclear Reactions, Nuclear Astrophysics, Statistical Properties of Nuclei, Experimental Facilities, Nuclear Data, Applications, Fundamental Physics.
