for HIV Cure Constantinos Petrovas,Vijayakumar Velu,2019-02-11 Currently more than 36 million people are infected with

HIV Although the introduction of highly active anti retroviral therapy HAART has led to substantial advances in the clinical management of HIV infected individuals HAART cannot completely eliminate the virus This is because CD4 T helper cells harboring the virus remain dormant reservoirs These reservoirs are difficult to measure and are present even in HAART treated HIV infected individuals with undetectable levels of HIV in the blood A growing body of studies has revealed follicular helper Tfh CD4 T cells a highly differentiated CD4 T cell population localized in immunologically sanctuary sites follicle germinal center as a major reservoir of HIV The present *Frontiers in Immunology* eBook compiles 16 timely review articles focusing on the dynamics of major follicular immune cell types in HIV SIV infection and their potential role for disease pathogenesis and the viral persistence in the lymph node This eBook provides a comprehensive presentation of recent published work on lymph node and especially Tfh cell dynamics in HIV infection and we hope that it will be useful for our further understanding of how such dynamics affect the interplay between virus and host as well as for the discovery of novel therapeutic targets in the fight against HIV

National Transport Models Lars Lundqvist,Lars-Göran

Mattsson,2013-11-11 National and European transport models become increasingly important The broadening of national transport policy from strategic infrastructure investments to infrastructure management strengthens the need for advanced and more policy sensitive tools of analysis The increase of interregional and international mobility requires forecasting tools that go beyond the urban or regional level The competition for national infrastructure investments among regions and for Trans European investments among nations has to be resolved by decisions and decision support systems at the appropriate spatial level Environmental impacts transcend regional and national boundaries and transport policies affecting these environmental impacts involve all spatial levels This volume presents the state of the art and prospects of a sample of the most advanced national and European transport models within a comparative framework

Stations as Nodes Manuela Triggianese,Roberto Cavallo,Nacima Baron,Joran Kuijper,2019-02-28

At the main point of intersection between the railway and the city stations are key elements in the organization of the intermodal transport as well as catalysts of urban developments in metropolises medium and small cities The focus of this publication is to explore the enrichment of a renewed approach of railway stations as intermodal nodes therefore acting as breeding grounds for both urban and social developments This book has been initiated and built upon several activities currently running at the Amsterdam Institute for Advanced Metropolitan Solutions AMS Institute Delft University of Technology DIMI Delft Deltas Infrastructure Mobility Initiative and Department of Architecture of the Faculty of Architecture and the Built Environment and University of Paris Est l cole d Urbanisme de Paris These activities have been framed within the context of two rapidly developing metropolitan areas Randstad in the Netherlands and M tropole du Grand Paris in the Ile de France This volume forms the basis for a research on the role of stations in future metropolitan areas with the ambition to link the two countries learning from their different cities and distinct geographical context through comparable mobility challenges on the levels of the inner city

suburban and peripheral areas In line with these considerations in 2018 AMS Institute TU Delft DIMI and the Dutch Embassy in Paris with Atelier N erlandais organized a successful workshop Stations of the Future in collaboration with La Fabrique de la Cit Together with Dutch and French planning entities involving mass transit operators and railway companies this workshop focused on several case studies in both metropolitan areas to understand the role of station hubs as intermodal nodes During this joint French Dutch event that took place in Paris we spoke on topics like Station as intermodal node Station as destination and Station as data center including a debate on the relation between public space and architecture densification and programming of station areas pedestrian flows management and the integration of data Following the Paris workshop the summer school Integrated Mobility Challenges in Future Metropolitan Areas was organised by AMS Institute and Delft University of Technology DIMI with the collaboration of the ARENA architectural research network University of Paris Est and the City of Amsterdam This 8 day workshop extended the debate among international young professionals academics and master students by looking at an important rail metro node in the metropolitan area of the city Amsterdam Sloterdijk Station a crucial hub in a bigger urban area for mobility and exchange and for urban growth The main question was which approaches and scenarios can be tested and applied to these intermodal nodes particularly when dealing with lack of space and growing number of users The results were four very different plans to improve the Sloterdijk Station area and to make the station a future proof intermodal hub In this publication invited experts from practice and knowledge institutes in France and the Netherlands share their common experience and draw on specific aspects and problems of conception management and development of stations A brief overview of the results of the two initiatives Stations of the Future and the summer school Integrated Mobility Challenges in Future Metropolitan Areas is here illustrated accompanied by photo reportages of both events and by a curated reportage of the Amsterdam Sloterdijk station area **UTPS, UMTA**
