Solid mechanics research for quantitative non-destructive evaluation Jan D. Achenbach, Y. Rajapakse, 2012-12-06 Within the Solid Mechanics Program at the Office of Naval Research ONR our primary mission is to establish a basic research program which addresses the fundamental issues in solid mechanics where a clear scientific understanding is lacking Our approach involves first identifying the various scales at which material and structural response and failure occur Within each level of behavior we address the basic mechanical phenomena for which a clear physical description is not available ONR's program emphasizes experimental research to identify and quantify the interacting behavior and response mechanisms Theoretical and computational approaches are developed to explain the details of the physical processes and to establish the technology necessary to control the thermomechanical behavior of materials and structures Within the Department of Defense it is a natural evolution that all new systems must generally operate in more demanding environments than the systems they replace Thus structural designers are pushed towards lighter weight precision structures utilizing new materials In such an environment structural design margins simultaneously shrink and become more critical Such trends make it essential that a well founded scientific base for the nondestructive detection and assessment of subcritical flaws in structural materials and structures exist Within the ONR Solid Mechanics Program we are interested in both the identification of flaws and assessment of their degree of criticality
