

ON THE SOLUTIONS OF LINEAR VOLTERRA EQUATIONS OF THE SECOND KIND WITH SUM KERNELS

PIERRE-LOUIS GISCARD

ABSTRACT. We consider a linear Volterra integral equation of the second kind with a sum kernel $K(t', t) = \sum_i K_i(t', t)$ and give the solution of the equation in terms of solutions of the separate equations with kernels K_i , provided these exist. As a corollary, we obtain a novel series representation for the solution with improved convergence properties. We illustrate our results with examples, including the first known Volterra equation solved by Heun's confluent functions. This solves a long-standing problem pertaining to the representation of such functions. The approach presented here has widespread applicability in physics via Volterra equations with degenerate kernels.

1. Introduction.

1.1. Context and background. Inhomogeneous linear Volterra integral equations of the second kind are equations in an unknown function of two variables $f(t', t)$ given by

$$(1) \quad f(t', t) = g(t', t) + \int_0^{t'} K(t', \tau) f(\tau, t) d\tau.$$

In this expression g and K are arbitrary functions of two variables, g being termed the *inhomogeneity* and K the *kernel* of the equation, respectively. Such equations are of paramount importance in physics, e.g. in designing quantum computing applications [9, 1, 21, 15]. In this case the desirability of analytical expansions for the solution is
