Nonequilibrium Effects in Ion and Electron Transport Jean W. Gallagher, 2012-12-06 This volume presents the contributions of the participants in the Sixth International Swarm Seminar held August 2-5 1989 at the Webb Institute in Glen Cove New York The Swarm Seminars are traditionally held as relatively small satellite conferences of the International Conference on the Physics of Electronic and Atomic Collisions ICPEAC which occurs every two years The 1989 ICPEAC took place in New York City prior to the Swarm Seminar The focus of the Swarm Seminars has been on basic research relevant to understanding the transport of charged particles mainly electrons and ions in weakly ionized gases This is a field that tends to bridge the gap between studies of fundamental binary atomic and molecular collision processes and studies of electrical breakdown or discharge phenomena in gases Topics included in the 1989 seminar ranged the gamut from direct determinations of charged particle collision cross sections to use of cross sections and swarm parameters to model the behavior of electrical gas discharges Although the range of subjects covered was in many respects similar to that of previous seminars there was an emphasis on certain selected themes that tended to give this seminar a distinctly different flavor There was for example considerable discussion on the meaning of equilibrium and the conditions under which nonequilibrium effects become important in the transport of electrons through a gas

*Scientific and Technical Aerospace Reports*, 1995 *Advances in Atomic, Molecular, and Optical Physics*, 1994-07-26 The latest volume in the highly acclaimed series addresses atomic collisions assessing the status of the current knowledge identifying deficiencies and exploring ways to improve the quality of cross section data Eleven articles written by foremost experts focus on cross section determination by experiment or theory on needs in selected applications and on efforts toward the compilation and dissemination of data This is the first volume edited under the additional direction of Herbert Walther Presents absolute cross sections for atomic collisions Uses benchmark measurements and benchmark calculations Discusses

needs for cross section data in applications Contains a guide to data resources bibliographies and compendia **Physical and Chemical Mechanisms in Molecular Radiation Biology** William A. Glass, Matesh N. Varma, 2012-12-06 The fundamental understanding of the production of biological effects by ionizing radiation may well be one of the most important scientific objectives of mankind such understanding could lead to the effective and safe utilization of the nuclear energy option In addition this knowledge will be of immense value in such diverse fields as radiation therapy and diagnosis and in the space program To achieve the above stated objective the U S Department of Energy DOE and its predecessors embarked upon a fundamental interdisciplinary research program some 35 years ago A critical component of this program is the Radiological and Chemical Physics Program RCPP When the RCPP was established there was very little basic knowledge in the fields of physics chemistry and biology that could be directly applied to understanding the effects of radiation on biological systems Progress of the RCPP program in its first 15 years was documented in the proceedings of a conference held at Airlie Virginia in 1972 At this conference it was clear that considerable progress had been made in research on the physical and chemical processes in well characterized systems that could be used to understand biological effects During this period of time most physical knowledge was obtained for the gas phase because the technology and instrumentation had not progressed to the point that measurements could be made in liquids more characteristic of biological materials **Atomic And Molecular Physics - Proceedings Of The 3rd Us/mexico Symposium** C Cisneros, Thomas J Morgan, I Alvarez, 1991-12-31 The Third US Mexico Symposium on Atomic and Molecular Physics brought together forty five leading investigators in many fields Both theory and experiment were well represented The papers in this volume are based on the participants invited talks at the symposium and represent an important collection reviewing the most up to date work in the different fields The diversity of research areas represented coupled to a common local point revealed different perspectives on such questions as How do particles depend on one another Correlation provides a good starting point but are there other useful conceptual approaches which will yield a new view of the phenomena and a more complete understanding The contributions in this volume provide different perspectives and bring together a collection of papers which serve as a basis for further progress in this field **Gaseous Dielectrics IX** Loucas G. that Gaseous Dielectrics VI will aid future research and development in and encourage wider industrial use of gaseous dielectrics The Organizing Committee of the Sixth International Symposium on Gaseous Dielectrics consisted of L G Christophorou U S A F Y Chu Canada A H Cookson U S A D L Damsky U S A O Farish U K I Gallimberti Italy A Garscadden U S A E Marode France T Nitta Japan W Pfeiffer Germany I Sauers U S A R J Van Brunt U S A and W Zaengl Switzerland The local arrangements committee consisted of members of the Health and Safety Research Division and personnel of the Conference Office of the Oak Ridge National Laboratory and staff of the University of Tennessee UTK The contributions of each member of these committees the work of the Session Chairmen the interest of the participants and the advice of innumerable colleagues are gratefully acknowledged

*Electrical Breakdown and Discharges in Gases* Erich E. Kunhardt, Lawrence H. Luessen, 2013-03-09 The Advanced Study Institute on Breakdown and Discharges in Gases was held in Les Arcs France June 28 to July 10 1981 The object of the Institute was to provide a broad but comprehensive presentation of the various topics in the field of Gaseous electronics To achieve this goal a number of lectures seminars and panel discussions were scheduled Each topic was developed by two tutorial and or review lectures and brought to the present state of the topic by seminars and panel discussions The program of topics and speakers was selected with the assistance of the advisory committee composed of J A Rees European Coordinator England M Goldman French Coordinator France A H Guenther USA M Kristiansen USA and A V Phelps USA The most memorable aspect of the Institute was the sustained high interest of the faculty and participants for the two week period The daily schedule was demanding five hours of lectures two hours of seminars and one of discussion These sessions were often extended because of presentation by the participants of impromptu seminars The discussions were intense Majestic 10th Blanc provided the backdrop for the lecture hall and these surroundings and the weather contributed to the overall positive mood It was a wonderful occasion The lectures and seminars have been collected into two volumes
