Coulton, J. de Belleruche, 2012-12-06 In situ hybridization has developed as a means of localizing specific DNA and RNA sequences within tissues The great strength of this approach is the ability to relate the distribution of specific nucleic acids with cell structures and the protein products of the target gene by means of immunohistochemistry Complementary DNA RNA or oligonucleotide probes suitably labelled are hybridized to specific DNA or RNA targets within tissues The spatial information thus obtained has contributed greatly to our understanding of such diverse areas of research as gene mapping viral infection cytogenetics protein synthesis prenatal diagnosis and tissue grafting This book is not intended as another recipe book although it does describe theoretical and practical aspects of the technology Rather the authors critically describe the contribution made by in situ hybridization to specific areas of medical research      *Advances in Human Genetics* Harry Harris, Kurt Hirschhorn, 2013-06-29 From reviews of previous volumes in the series Extremely valuable thoroughly recommended *Annals of Human Genetics* The most lucid and stimulating discussions of the topic to be

Büchner, W. Hiddemann, B. Wörmann, G. Schellong, J. Ritter, 2012-12-06 The rates of acute leukemia cure have gradually improved over the last decade Clinical study results reflect the impact of chemotherapy intensity and duration the role of prolonged maintenance intensified consolidation or very early intensification Further progress has also been achieved in bone marrow transplantation and recent prospective studies and meta analyses have contributed comparisons of the high antileukemic efficacy of bone marrow transplantation to that of improved chemotherapy This allows a more successful combining of the two forms of treatment New prognostic factors have emerged from both cytogenetic and molecular genetic research Thus the Philadelphia chromosome translocation and the bcr abl gene rearrangement have proven to be the dominating risk factor in acute lymphoblastic leukemia Since the frequency increases with age differences in prognosis between children and adults

can be explained Evaluation of molecular and immunologic leukemia cell markers has provided a better understanding of residual leukemia in clinical remission as a prognostic factor and in monitoring the effectiveness of the antileukemic strategy Recent work on leukemic cell biology has resulted in novel therapeutic approaches such as terminal differentiation by all trans retinoic acid modulation of chemotherapy by hematopoietic growth factors such as GM CSF and enhancement of immunologic control by cytokines such as interleukin 2 New antimicrobial drugs and the application of mostly empiric anti infectious strategies have helped reducing the therapeutic risk Thus a number of recent achievements have provided us with new options in the management of patients with acute leukemias
