Nonlinear Evolution Equations And Dynamical Systems - Proceedings Of The Workshop (Needs '91) M

Boiti, Luigi Martina, F Pempinelli, 1992-08-26 The Workshop NEEDS 91 brought together from all over the world scientists engaged in research on nonlinear systems either their underlying mathematical properties or their physical applications Accordingly many talks were devoted to present methods of solution like spectral transform and to the investigation of structural geometrical and or algebraic properties of continuous and discrete nonlinear evolution equations Peculiar nonlinear systems such as cellular automata were also discussed Applications to various fields of physics namely quantum field theory fluid dynamics general relativity and plasma physics were considered **Nonlinear Evolution Equations**

Boling Guo, Fei Chen, Jing Shao, Ting Luo, 2019-11-05 Nonlinear Evolution Equation presents state of the art theories and results on nonlinear evolution equation showing related mathematical methods and applications The basic concepts and research methods of infinite dimensional dynamical systems are discussed in detail The unique combination of mathematical rigor and physical background makes this work an essential reference for researchers and students in applied mathematics and physics **Proceedings of the Workshop Nonlinear Physics, Theory and Experiment, II** Mark J. Ablowitz, 2003

The theory of solitons involves a broad variety of mathematical methods and appears in many areas of physics technology biology and pure and applied mathematics In this book emphasis is placed on both theory considering mathematical approaches for classical and quantum nonlinear systems both continuous and discrete and experiment with special discussions on high bit rate optical communications and pulse dynamics in optical materials **Nonlinear Evolution**

Equations and Dynamical Systems M. Boiti, L. Martina, F. Pempinelli, 1992-01-01 **Proceedings of the Workshop on Nonlinearity, Integrability and All That--Twenty Years After NEEDS '79** M. Boiti, 2000 This book discusses achievements in the last 20 years recent developments and future perspectives in nonlinear science Both continuous and discrete systems classical and quantum are considered **Advances in Unconventional Computing** Andrew

Adamatzky, 2016-07-26 The unconventional computing is a niche for interdisciplinary science cross bred of computer science physics mathematics chemistry electronic engineering biology material science and nanotechnology The aims of this book are to uncover and exploit principles and mechanisms of information processing in and functional properties of physical chemical and living systems to develop efficient algorithms design optimal architectures and manufacture working prototypes of future and emergent computing devices This second volume presents experimental laboratory prototypes and applied computing implementations Emergent molecular computing is presented by enzymatic logical gates and circuits and DNA nano devices Reaction diffusion chemical computing is exemplified by logical circuits in Belousov Zhabotinsky medium and geometrical computation in precipitating chemical reactions Logical circuits realised with solitons and impulses in polymer chains show advances in collision based computing Photo chemical and memristive devices give us a glimpse on hot topics of a novel

hardware Practical computing is represented by algorithms of collective and immune computing and nature inspired optimisation Living computing devices are implemented in real and simulated cells regenerating organisms plant roots and slime mould The book is the encyclopedia the first ever complete authoritative account of the theoretical and experimental findings in the unconventional computing written by the world leaders in the field All chapters are self contains no specialist background is required to appreciate ideas findings constructs and designs presented This treatise in unconventional computing appeals to readers from all walks of life from high school pupils to university professors from mathematicians computers scientists and engineers to chemists and biologists

Differential Equations P.A. Clarkson,2012-12-06 In the study of integrable systems two different approaches in particular have attracted considerable attention during the past twenty years 1 The inverse scattering transform IST using complex function theory which has been employed to solve many physically significant equations the soliton equations 2 Twistor theory using differential geometry which has been used to solve the self dual Yang Mills SDYM equations a four dimensional system having important applications in mathematical physics Both soliton and the SDYM equations have rich algebraic structures which have been extensively studied Recently it has been conjectured that in some sense all soliton equations

arise as special cases of the SDYM equations subsequently many have been discovered as either exact or asymptotic reductions of the SDYM equations Consequently what seems to be emerging is that a natural physically significant system such as the SDYM equations provides the basis for a unifying framework underlying this class of integrable systems i.e. soliton systems This book contains several articles on the reduction of the SDYM equations to soliton equations and the relationship between the IST and twistor methods The majority of nonlinear evolution equations are nonintegrable and so asymptotic numerical perturbation and reduction techniques are often used to study such equations This book also contains articles on perturbed soliton equations Painlevé analysis of partial differential equations studies of the Painlevé equations and symmetry reductions of nonlinear partial differential equations
