Nonlinear Modeling And Forecasting:

Nonlinear Modeling And Forecasting Martin Casdagli, Stephen Eubank, 1992-06-20 Based on a Santa Fe Institute and NATO sponsored workshop this book brings together the ideas of leading researchers in the rapidly expanding interdisciplinary field of nonlinear modeling in an attempt to stimulate the cross fertilization of ideas and the search for unifying themes The central theme of the workshop was the construction of nonlinear models from time series data Approaches to this problem have drawn from the disciplines of multivariate function approximation and neural nets dynamical systems and chaos statistics information theory and control theory Applications have been made to economics mechanical engineering meteorology speech processing biology and fluid dynamics Nonlinear Modeling and Forecasting Mertin Casdagli, 1992 **Modelling and Forecasting Financial Data** Abdol S. Soofi, Liangyue Cao, 2012-12-06 Modelling and Forecasting Financial Data brings together a coherent and accessible set of chapters on recent research results on this topic To make such methods readily useful in practice the contributors to this volume have agreed to make available to readers upon request all computer programs used to implement the methods discussed in their respective chapters Modelling and Forecasting Financial Data is a valuable resource for researchers and graduate students studying complex systems in finance biology and physics as well as those applying such methods to nonlinear time series analysis and signal processing *Recent Advances in Estimating Nonlinear Models* Jun Ma, Mark Wohar, 2013-09-24 Nonlinear models have been used extensively in the areas of economics and finance Recent literature on the topic has shown that a large number of series exhibit nonlinear dynamics as opposed to the alternative linear dynamics Incorporating these concepts involves deriving and estimating nonlinear time series models and these have typically taken the form of Threshold Autoregression TAR models Exponential Smooth Transition ESTAR models and Markov Switching MS models among several others This edited volume provides a timely overview of nonlinear estimation techniques offering new methods and insights into nonlinear time series analysis It features cutting edge research from leading academics in economics finance and business management and will focus on such topics as Zero Information Limit Conditions using Markov Switching Models to analyze economics series and how best to distinguish between competing nonlinear models Principles and techniques in this book will appeal to econometricians finance professors teaching quantitative finance researchers and graduate students interested in learning how to apply advances in nonlinear time series modeling to solve complex problems in economics and finance *Linear and Nonlinear Modeling and Forecasting of Electric Power Loads* Yonggoing Zhang, 1992 If Nonlinear Models Cannot Forecast, what Use are They? James Bernard Ramsey, 1995 *Forecasting for Economics and Business* Gloria González-Rivera, 2016-12-05 For junior senior undergraduates in a variety of fields such as economics business administration applied mathematics and statistics and for graduate students in quantitative masters programs such as MBA and MA MS in economics A student friendly approach to understanding forecasting Knowledge of forecasting methods is

among the most demanded qualifications for professional economists and business people working in either the private or public sectors of the economy The general aim of this textbook is to carefully develop sophisticated professionals who are able to critically analyze time series data and forecasting reports because they have experienced the merits and shortcomings of forecasting practice

The Oxford Handbook of Economic Forecasting Michael P. Clements, David F. Hendry, 2011-06-29 This Handbook provides up to date coverage of both new and well established fields in the sphere of economic forecasting The chapters are written by world experts in their respective fields and provide authoritative yet accessible accounts of the key concepts subject matter and techniques in a number of diverse but related areas It covers the ways in which the availability of ever more plentiful data and computational power have been used in forecasting in terms of the frequency of observations the number of variables and the use of multiple data vintages Greater data availability has been coupled with developments in statistical theory and economic analysis to allow more elaborate and complicated models to be entertained the volume provides explanations and critiques of these developments These include factor models DSGE models restricted vector autoregressions and non linear models as well as models for handling data observed at mixed frequencies high frequency data multiple data vintages methods for forecasting when there are structural breaks and how breaks might be forecast Also covered are areas which are less commonly associated with economic forecasting such as climate change health economics long horizon growth forecasting and political elections Econometric forecasting has important contributions to make in these areas along with how their developments inform the mainstream
