Nonlinear Evolution Of Spatial Economic Systems With 75 Figures:

Nonlinear Evolution of Spatial Economic Systems Peter Nijkamp, Aura Reggiani, 2012-12-06 Is our world more dynamic than it used to be in the past Have phenomena in the social science field become unpredictable Are chaotic events nowadays occurring more frequently than in the past Such questions are often raised in popular debates on nonlinear evolution and self organizing systems At the same time many scientists are also raising various intriguing methodological issues Is it possible to separate deterministic chaos from random disturbances if their trajectories are almost similar Is prediction still possible in a world of chaos Poincare Is it possible to distinguish specification errors from measurement errors in a nonlinear dynamic model Is evolution a random process The list of such questions can easily be extended with dozens of others But despite the myriad of questions on problems of nonlinear evolution one common trait is evident in both the natural and the social sciences we are still groping in the dark in areas which are par excellence promising hunting grounds for exploratory and exploratory research viz structural grounds in an uncertain nonlinear world The present book aims at offering a collection of refreshing contributions to the above research issues by focusing attention in particular on nonlinear dynamic evolution in space at the Netherlands Institute for Advanced Study NIAS in Wassenaar the Netherlands The Institute has to be thanked for its hospitality and support reflected inter alia in a workshop at which several of the papers included in this book were discussed

Nonlinear Dynamical Economics and Chaotic Motion Hans-Walter Lorenz, 2012-12-06 Usually the first edition of a book still contains a multiplicity of typographic con ceptional and computational errors even if one believes the opposite at the time of publication As this book did not represent a counterexample to this rule the current second edition offers a chance to remove at least the known shortcomings The book has been partly re organized The previously rather long Chapter 4 has been split into two separate chapters dealing with discrete time and continuous time approaches to nonlinear economic dynamics The short summary of basic properties of linear dynamical systems has been banned to an appendix because the line of thought in the chapter seems to have been unnecessarily interrupted by these technical details and because the book concentrates on nonlinear systems This appendix which mainly deals with special formal properties of dynamical sys tems also contains some new material on invariant subspaces and center manifold reductions A brief introduction into the theory of lags and operators is followed by a few remarks on the relation between the true properties of dynamical systems and their behavior observable in numerical experiments Additional changes in the main part of the book include a re consideration of Popper s determinism vs inde terminism discussion in the light of chaotic properties of deterministic nonlinear systems in Chapter 1 An investigation of a simultaneous price quantity adjustment process a more detailed inquiry into the uniqueness property of limit cycles and a short presentation of relaxation oscillations are included in Chapter 2

The Economics of Complex Spatial Systems A. Reggiani, P. Nijkamp, 1998-05-05 This book argues that complexity theory offers new departures for spatial economic modelling It offers a broad overview of recent advances in non

linear dynamics catastrophe theory chaos theory evolutionary theory and so forth and illustrates the relevance of this new paradigm on the basis of several illustrations in the area of space economy The empirical limitations inherent in the use of non linear dynamic systems approaches are also addressed Next the application potential of biocomputing in particular neural networks and evolutionary algorithms is stressed while various empirical model results are presented The book concludes with an agenda for further research

Beyond Microfoundations David Colander,1996-01-26 This book discusses the foundations for post Walrasian macroeconomics

Complex Evolutionary Dynamics in Urban-Regional and Ecologic-Economic Systems J. Barkley Rosser,2011-06-22 Drawing on the middle chapters from the first edition of J Barkley Rosser s seminal work From Catastrophe to Chaos this book presents an unusual perspective on economics and economic analysis Current economic theory largely depends upon assuming that the world is fundamentally continuous However an increasing amount of economic research has been done using approaches that allow for discontinuities such as catastrophe theory chaos theory synergetics and fractal geometry The spread of such approaches across a variety of disciplines of thought has constituted a virtual intellectual revolution in recent years This book reviews the applications of these approaches in various subdisciplines of economics and draws upon past economic thinkers to develop an integrated view of economics as a whole from the perspective of inherent discontinuity

Environment & Planning ,1995

The Complexity Vision and the Teaching of Economics David C. Colander,2000 This ground breaking book focuses on the implications of the complexity vision such as that held by economists at the Santa Fe Institute for the teaching of economics This complexity vision suggests that answers to questions such as how do markets develop and how do they evolve need to be approached head on Complexity economics is beginning to do just that Most of the work in complexity is highly formal and technical it seems far away from issues such as the teaching of economics This book is different The focus of this book is not on the grand theories or technical aspects of complexity Instead it is on the teaching of economics It asks the question how would the teaching of economics change if complexity is taken seriously An outstanding group of contributors including Brian Arthur Buz Brock and Duncan Foley provide interesting and provocative answers to that question in a non technical and highly accessible style It is a book that should be read by all those teaching economics as well as those who are interested in where the complexity revolution in science might be leading

From Catastrophe to Chaos: A General Theory of Economic Discontinuities J. Barkley Rosser,2013-12-01 Now however we face an Age of Discontinuity in world economy and technology We might succeed in making it an age of great economic growth as well But the one thing that is certain so far is that it will be a period of change in technology and in economic policy in industry structures and in economic theory in the knowledge needed to govern and manage and in economic issues While we have been busy finishing the great nineteenth century economic edifice the foundations have shifted beneath our feet Peter F Drucker 1968 The Age of Discontinuity p 10 This project has had a long gestation period probably ultimately dating to a

Youthful Obsession with watershed divides and boundaries My awareness of the problem of discontinuity in economics dates to my first encounter with the capital theory paradoxes in the late 1960s the fruits of which can be seen in Chapter 8 of this book This awareness led to a frustration over the apparent lack of a mathematics of discontinuity a lack that was in the process of rapidly being overcome at that time

Sustainable Development in Changing Complex Earth Systems
 Attila Kerényi, Richard William McIntosh, 2019-11-09 This book applies system theory to analyze the operation and structure of the complex earth surface system including the interactions between society and nature that cause environmental degradation and threats to human populations The possible ways to harmonize the operation of a global society as a complex system using the United Nations sustainable development goals are investigated as well as the major efforts currently implemented to achieve this objective and why many are unsuccessful Readers will learn this material through case studies that assess the essential conditions required to occupy a planet sustainably and examine the complex interactions between society and nature in the atmosphere hydrosphere biosphere and outer layers of the lithosphere The book is written for undergraduate students in geography earth sciences environmental sciences and ecology and will also appeal to environmental agency employees nature protection representatives teachers and researchers

Complex Dynamics and Morphogenesis
 Chaouqi Misbah, 2016-12-01 This book offers an introduction to the physics of nonlinear phenomena through two complementary approaches bifurcation theory and catastrophe theory Readers will be gradually introduced to the language and formalisms of nonlinear sciences which constitute the framework to describe complex systems The difficulty with complex systems is that their evolution cannot be fully predicted because of the interdependence and interactions between their different components Starting with simple examples and working toward an increasing level of universalization the work explores diverse scenarios of bifurcations and elementary catastrophes which characterize the qualitative behavior of nonlinear systems The study of temporal evolution is undertaken using the equations that characterize stationary or oscillatory solutions while spatial analysis introduces the fascinating problem of morphogenesis Accessible to undergraduate university students in any discipline concerned with nonlinear phenomena physics mathematics chemistry geology economy etc this work provides a wealth of information for teachers and researchers in these various fields Chaouqi Misbah is a senior researcher at the CNRS National Centre of Scientific Research in France His work spans from pattern formation in nonlinear science to complex fluids and biophysics In 2002 he received a major award from the French Academy of Science for his achievements and in 2003 Grenoble University honoured him with a gold medal Leader of a group of around 40 scientists he is a member of the editorial board of the French Academy of Science since 2013 and also holds numerous national and international responsibilities
