Nonlinear networks and systems Richard Clay, 1984 **Theory of Nonlinear Networks and Systems** Thomas E. Stern, 1965 **Theory of nonlinear networks and systems ; and introduction** Thomas E. Sterns, 1965 *Special Issue on Nonlinear Networks and Systems* Wolfgang Mathis, Albrecht Reibiger, 1992 Synchronization in Complex Networks of Nonlinear Dynamical Systems Chai Wah Wu, 2007 This book brings together two emerging research areas synchronization in coupled nonlinear systems and complex networks and study conditions under which a complex network of dynamical systems synchronizes While there are many texts that study synchronization in chaotic systems or properties of complex networks there are few texts that consider the intersection of these two very active and interdisciplinary research areas The main theme of this book is that synchronization conditions can be related to graph theoretical properties of the underlying coupling topology The book introduces ideas from systems theory linear algebra and graph theory and the synergy between them that are necessary to derive synchronization conditions Many of the results which have been obtained fairly recently and have until now not appeared in textbook form are presented with complete proofs This text is suitable for graduate level study or for researchers who would like to be better acquainted with the latest research in this area **Nonlinear System Identification** Stephen A. Billings, 2013-07-29 Nonlinear System Identification NARMAX Methods in the Time Frequency and Spatio Temporal Domains describes a comprehensive framework for the identification and analysis of nonlinear dynamic systems in the time frequency and spatio temporal domains This book is written with an emphasis on making the algorithms accessible so that they can be applied and used in practice Includes coverage of The NARMAX nonlinear autoregressive moving average with exogenous inputs model The orthogonal least squares algorithm that allows models to be built term by term where the error reduction ratio reveals the percentage contribution of each model term Statistical and qualitative model validation methods that can be applied to any model class Generalised frequency response functions which provide significant insight into nonlinear behaviours A completely new class of filters that can move split spread and focus energy The response spectrum map and the study of sub harmonic and severely nonlinear systems Algorithms that can track rapid time variation in both linear and nonlinear systems The important class of spatio temporal systems that evolve over both space and time Many case study examples from modelling space weather through identification of a model of the visual processing system of fruit flies to tracking causality in EEG data are all included to demonstrate how easily the methods can be applied in practice and to show the insight that the algorithms reveal even for complex systems NARMAX algorithms provide a fundamentally different approach to nonlinear system identification and signal processing for nonlinear systems NARMAX methods provide models that are transparent which can easily be analysed and which can be used to solve real problems This book is intended for graduates postgraduates and researchers in the sciences and engineering and also for users from other fields who have collected data and who wish to identify models to help to understand the dynamics of their

Artificial Neural Networks for Modelling and Control of Non-Linear Systems Johan A.K. Suykens, Joos P.L. Vandewalle, B.L. de Moor, 2012-12-06 Artificial neural networks possess several properties that make them particularly attractive for applications to modelling and control of complex non linear systems Among these properties are their universal approximation ability their parallel network structure and the availability of on and off line learning methods for the interconnection weights However dynamic models that contain neural network architectures might be highly non linear and difficult to analyse as a result Artificial Neural Networks for Modelling and Control of Non Linear Systems investigates the subject from a system theoretical point of view However the mathematical theory that is required from the reader is limited to matrix calculus basic analysis differential equations and basic linear system theory No preliminary knowledge of neural networks is explicitly required The book presents both classical and novel network architectures and learning algorithms for modelling and control Topics include non linear system identification neural optimal control top down model based neural control design and stability analysis of neural control systems A major contribution of this book is to introduce NLq Theory as an extension towards modern control theory in order to analyze and synthesize non linear systems that contain linear together with static non linear operators that satisfy a sector condition neural state space control systems are an example Moreover it turns out that NLq Theory is unifying with respect to many problems arising in neural networks systems and control Examples show that complex non linear systems can be modelled and controlled within NLq theory including mastering chaos The didactic flavor of this book makes it suitable for use as a text for a course on Neural Networks
