Differential Equations and Applications William F. Ames, 1967 Systems of Nonlinear Partial Differential Equations A.W. Leung, 2013-03-09 Et moi si j'avait su comment en revenir ! One service mathematics has rendered the je n'y sçrais point à l'humanité. It has put common sense back where it belongs on the topmost shelf next to the dusty canister labelled discarded non-sense. The series is divergent therefore we may be senseless. Eric T. Bell is able to do something with it. Heaviside Mathematics is a tool for thought. A highly necessary tool in a world where both feedback and non-linearities abound. Similarly all kinds of parts of mathematics serve as tools for other parts and for other sciences. Applying a simple rewriting rule to the quote on the right above one finds such statements as One service topology has rendered mathematical physics. One service logic has rendered computer science. One service category theory has rendered mathematics. All arguably true. And all statements obtainable this way form part of the *raison d'être* of this series.

Nonlinear Partial Differential Equations and Their Applications Doina Cioranescu, Jacques-Louis Lions, 2002-06-21 This book contains the written versions of lectures delivered since 1997 in the well known weekly seminar on Applied Mathematics at the Collège de France in Paris directed by Jacques-Louis Lions. It is the 14th and last of the series due to the recent and untimely death of Professor Lions. The texts in this volume deal mostly with various aspects of the theory of nonlinear partial differential equations. They present both theoretical and applied results in many fields of growing importance such as Calculus of variations and optimal control, optimization, system theory and control operations, research fluids and continuum mechanics, nonlinear dynamics, meteorology and climate, homogenization and material science, numerical analysis and scientific computations. The book is of interest to everyone from postgraduate who wishes to follow the most recent progress in these fields.

Analytical Properties of Nonlinear Partial Differential Equations Alexei F. Cheviakov, Peng Zhao, 2024 Nonlinear partial differential equations (PDE) are at the core of mathematical modeling. In the past decades and recent years multiple analytical methods to study various aspects of the mathematical structure of nonlinear PDEs have been developed. Those aspects include C and S integrability, Lagrangian and Hamiltonian formulations, equivalence transformations, local and nonlocal symmetries, conservation laws, and more. Modern computational approaches and symbolic software can be employed to systematically derive and use such properties and where possible construct exact and approximate solutions of nonlinear equations. This book contains a consistent overview of multiple properties of nonlinear PDEs, their relations, computation algorithms, and a uniformly presented set of examples of application of these methods to specific PDEs. Examples include both well known nonlinear PDEs and less famous systems that arise in the context of shallow water waves and far beyond. The book will be of interest to researchers and graduate students in applied mathematics, physics, and engineering and can be used as a basis for research, study, reference, and applications.
