Michel, 2010-07-08 Life has many surprises One of the best surprises is meeting a caring mentor an encouraging collaborator or an enthusiastic friend This volume is a tribute to Professor Michael K Sain who is such a teacher colleague and friend On the beautiful fall day of October 27 2007 friends families colleagues and former students gathered at a workshop held in Notre Dame Indiana This workshop brought together many people whose lives have been touched by Mike to celebrate his milestone 70th birthday and to congratulate him on his contributions in the fields of systems controls and control Mike was born on March 22 1937 in St Louis Missouri After obtaining his B S E E and M S E E at St Louis University he went on to study at the University of Illinois at Urbana Champaign for his doctoral degree With his Ph D degree complete he came to the University of Notre Dame in 1965 as an assistant professor He became an associate professor in 1968 a full professor in 1972 and the Frank M Freimann Chair in Electrical Engineering in 1982 He has remained at and loved the University of Notre Dame for over 40 years Mike also held a number of consulting jobs throughout his career Most notably he consulted with the Energy Controls Division of Allied Bendix Aerospace from 1976 to 1988 and the North American Operations branch of the Research and Development Laboratory of General Motors Corporation for a decade 1984 1994

New Trends in Systems Theory Giuseppe Conte, Anna M. Perdon, Bostwick Wyman, 2013-03-07 The University of Genoa Ohio State University Joint Conference on New Trends in Systems Theory was held at the Badia di S Andrea in Genoa on July 9 11 1990 This Proceedings volume contains articles based on two of the three Plenary talks and most of the shorter presentations The papers are arranged by author and no attempt has been made to organize them by

topic We would like to thank the members of the Scientific Committee and of the Program Committee the speakers and authors and everyone who attended the conference Approximately 120 researchers and students from all over the world visited Genoa for the meeting representing a wide spectrum of areas in pure and applied control and systems theory The success of the conference depended on their high level of scientific and engineering expertise not to mention their enthusiasm The Conference on New Trends in Systems Theory would not have been possible without the help of a great many institutions and people We would like to thank the University of Genoa particularly Professor Enrico Beltrametti and the Ohio State University's Columbian Quincentenary Committee led by Professor Christian Zacher for encouragement and financial assistance The University of Genoa Mathematics Department and Communication Computer and System Sciences Department supplied assistance and technical help The staff of the Consorzio Genova Ricerche particularly Ms Piera Ponta and Ms Camilla Marconi worked diligently over many months and especially during the conference itself to insure a smooth and enjoyable meeting

Foundations of System Theory: Finitary and Infinitary Conditions Brian D.O. Anderson, Michael A. Arbib, E. G. Manes, 2012-12-06 This paper is one of a series in which the ideas of category theory are applied to problems of system theory As with the three principal earlier papers 1 3 the emphasis is on study of the realization problem or the problem of associating with an input output description of a system an internal description with something analogous to a state space In this paper several sorts of machines will be discussed which arrange themselves in the following hierarchy Input process Machine Output process Tree automaton Machine State behavior Machine I Adjoint Machine Sequential Machine I Decomposable Machine Linear System Group Machine Each member of the hierarchy includes members below it examples are included in parentheses and each example is at its lowest possible point in the hierarchy There are contrived examples of output process machines and IV state behavior machines which are not adjoint machines 3 but as yet no examples with the accepted stature of linear systems 4 group machines 5 6 sequential machines 7 Ch 2 and tree automata 7 Ch 4
