**Nonlinear Waves in Active Media** Jüri Engelbrecht, 2012-12-06 This volume contains the contributions to the Euromech Colloquium No 241 on Nonlinear Waves in Active Media at the Institute of Cybernetics of the Estonian Academy of Sciences Tallinn Estonia USSR September 27-30 1988. The Co-chairmen of the Euromech Colloquium felt that it would be a good service to the community to publish these proceedings. First, the topic itself, dealing with various wave processes with energy influx, is extremely interesting and attracted a much larger number of participants than usual, a clear sign of its importance to the scientific community. Second, Euromech No 241 was actually the first Euromech Colloquium held in the Soviet Union and could thus be viewed as a milestone in the extending scientific contacts between East and West. At the colloquium, 50 researchers working in very different branches of science met to lecture on their results and to discuss problems of common interest. An introductory paper by J. Engelbrecht presents the common motivation and background of the topics covered. Altogether 36 speakers presented their lectures, of which 30 are gathered here. The remaining six papers, which will appear elsewhere, are listed on page X. In addition, three contributions by authors who could not attend the colloquium are included. The two lectures given by A. S. Mikhailov, V. S. Davydov, and V. S. Zykov are here published as one long paper.

**Physical Acoustics** M.A. Breazeale, O. Leroy, 2012-12-06 This book contains 17 invited papers and 80 communicated papers presented at the International Symposium on Physical Acoustics held at the University Campus of Kortrijk, Belgium, from 19-22 June 1990. The twenty-fifth anniversary of the Campus was celebrated with special activities such as concerts, exhibitions, and scientific meetings. This symposium was a part of the celebration. The 120 participants came from 18 different countries. Among the largest groups, we mention 32 French contributions and 19 contributions from the U.S.S.R. We especially thank Prof. V. V. Proklov from Moscow and Prof. S. V. Kulakov from Leningrad who helped us with the distribution of invitations in the U.S.S.R. We also thank Prof. G. Quentin and Ir. B. Poiree from Paris who endeavored to inform all French acousticians. We thank all the lecturers for their effort in producing the material for the book in time. The invited lectures have been collected and retyped by Prof. M. Breazeale, U.S.A., while the contributed papers were collected by Prof. O. Leroy and retyped in Belgium. The first 200 pages of the book comprise the invited lectures, not classified by topic but are in alphabetical order with reference to the first author. The second part of the book contains the contributed papers and posters, also classified in alphabetical order according to the first author.

**A Journey into the Nonlinear World** Jüri Engelbrecht, 2024-07-30 This is a personal story about being involved in the study of nonlinear phenomena for more than half a century. The focus is on the development of ideas and the resulting knowledge. This is the visible part of research, but much is usually hidden. The author describes how the ideas were generated and how an invisible college of friends and colleagues has emerged. The presentation is spiced by thoughts about the beauty of science and philosophical considerations on the complex world where nonlinear interactions play an important role. The book is in some sense a biography, but not so much.

about the personal life of the author it is about science and its actors Based on the author's experience in many European research centres and science policy institutions it reflects on the development of knowledge in nonlinear dynamics as well as science policy actions over the second half of the 20th century and the first quarter of the 21st century Graduates and postgraduates interested in the progress of research will find the book particularly engaging

Gallardo, Manuel Lozano, 2012-12-06 This volume contains the lectures presented by invited speakers at the IV La Ribera International Summer School on Nuclear Physics This was the IV edition of a summer school organized by our group every three years on topics related to nuclear physics This Summer School was aimed mainly at young nuclear physicists both theoreticians and experimentalists engaged in research work at predoctoral or recent postdoctoral level The topics treated in the three previous editions of the School were Heavy Ion Collisions Theory of Nuclear Structure and Reactions and Nuclear Astrophysics This year's School was entitled Nuclear Physics at the Borderlines Special emphasis was placed on those topics along which nuclear physics is expected to develop in the next few years The aim of the School was to provide the attendants with an opportunity to get into close contact with experienced researchers and listen to their account of the present state of the art in nuclear physics and the main future lines of development

*Quark—Gluon Plasma* Bikash Sinha, Santanu Pal, Sibaji Raha, 2012-12-06 Quark Gluon Plasma QGP is a state of matter predicted by the theory of strong interactions Quantum Chromodynamics QCD The area of QGP lies at the

interface of particle physics field theory nuclear physics and many body theory statistical physics cosmology and astrophysics In its brief history about a decade QGP has seen a rapid convergence of ideas from these previously diverging disciplines This volume includes the lectures delivered by eminent specialists to students without prior experience in QGP Each course thus starts from the basics and takes the students by steps to the current problems The chapters are self contained and pedagogic in style The book may therefore serve as an introduction for advanced graduate students intending to enter this field or for physicists working in other areas Experts in QGP may also find this volume a handy reference Specific examples used to elucidate how theoretical predictions and experimentally accessible quantities may not always correspond to one another make this book ideal for self study for beginners This feature will also make the volume thought provoking for QGP practitioners

***Superconducting Quantum Electronics*** Volkmar Kose, 2012-12-06 With the surprising discovery of superconductivity at temperatures above 100 K this field was not only brought into the public eye but also stimulated research in universities scientific institutions and industry thus continuing the fascinating development which began with the discovery of the Josephson effect in the sixties Cryoelectronics has become a special branch of cryophysics and cryotechnics and today plays a prominent role whenever high resolution and precision measurements are required Motivated by this development seven years ago scientists working in cryoelectronics in the Federal Republic of Germany felt the necessity for regular meetings allowing a free exchange of ideas and results achieved Seminars under the title of Kryoelektronische Bauelemente were held for the first time at the Physikalisch Technische Bundesanstalt in Braunschweig in 1982 on the occasion of the 100th anniversary of the birth of Walther Meißner a pioneer in superconductivity Since then meetings have been held every year at different venues in Germany It is now felt that the status of this field necessitates a review of the results of the past a description of the current state of the art and a discussion of future perspectives This book entitled SUPERCONDUCTING QUANTUM ELECTRONICS is a collection of invited lectures and contributions which will inform the reader on the most interesting problems involving fundamentals sensitive detectors and precision metrology being studied by different groups

**Superconductors** Alexandr A. Ovchinnikov,Ivan I. Ukrainskii,2012-12-06 Advances in the physics and chemistry of low dimensional systems have been really magnificent in the last few decades Hundreds of quasi one dimensional and quasi two dimensional systems have been synthesized and studied The most popular representatives of quasi one dimensional materials are polyacetylenes CH<sub>1</sub> and conducting donor acceptor molecular crystals TTF z TCNQ Examples of quasi two dimensional systems are high temperature superconductors HTSC based on copper oxides  $La_2CuO_4$   $YBa_2Cu_3O_{6-y}$  and organic superconductors based on BEDT-TIP molecules The properties of such one and two dimensional materials are not yet fully understood On the one hand the equations of motion of one dimensional systems are rather simple which facilitates rigorous solutions of model problems On the other hand manifestations of various interactions in one dimensional systems are rather peculiar This refers in particular to electron-electron and electron-phonon interactions Even within the limit of a weak coupling constant electron-electron correlations produce an energy gap in the spectrum of one dimensional metals implying a Mott transition from metal to semiconductor state In all these cases perturbation theory is inapplicable Which is one of the main difficulties on the way towards a comprehensive theory of quasi one dimensional systems This meeting held at the Institute for Theoretical Physics in Kiev May 15-18 1990 was devoted to related problems The papers selected for this volume are grouped into three sections Symmetries and Singularity Structures Muthuswamy Lakshmanan,Muthiah
