**Selected Papers:**

*Non-Monotonic Extensions of Logic Programming* Louis M. Pereira, 1995-06-20 This volume is based on papers presented during the ICLP 94 Workshop on Nonmonotonic Extensions of Logic Programming and on papers solicited afterwards from key researchers participating in the workshop In total 10 carefully refereed revised full research papers on semantics and computational aspects of logic programs are included Logic programs rely on a nonmonotonic operator often referred to as negation by failure or negation by default The nonmonotonicity of this operator allows to apply results from the area of nonmonotonic theories to the investigation of logic programs and vice versa This volume is devoted to the interdependence of nonmonotonic formalisms and logic programming

*Extensions of Logic Programming* Roy Dyckhoff, 1994-05-20 The papers in this volume are extended versions of presentations at the fourth International Workshop on Extensions of Logic Programming held at the University of St Andrews March April 1993 Among the topics covered in the volume are definitional reflection and completion modules in lambda Prolog representation of logics as partial inductive definitions non procedural logic programming knowledge representation

**Extensions of Logic Programming** Evelina Lamma, Paola Mello, 1993-02-12 This book contains papers which investigate how to extend logic programming toward the artificial intelligence and software engineering areas covering both theoretical and practical aspects Some papers investigate topics such as abductive reasoning and negation Some works discuss how to enhance the expressive power of logic programming by introducing constraints sets and integration with functional programming Other papers deal with the structuring of knowledge into modules taxonomies and objects with the aim of extending logic programming toward software engineering applications A section is devoted to papers concentrating on proof theory and inspired by Gentzen style sequent or natural deduction systems Topics such as concurrency are considered to enhance the expressive power of logic languages Finally some papers mainly concern implementation techniques for some of these logic programming extensions
