Nonsampling Error in Surveys Judith T. Lessler, William D. Kalsbeek, 1992-05-07 Focuses on three areas of nonsampling survey errors frame nonresponse and measurement error Each one is analysed by defining key terms formulating known effects and examining suggested remedies Also the terminology related to each source of error is reviewed while historically tracing the major contributions to the literature

Nonsampling Error in Social Surveys David E. McNabb, 2013-07-30 A welcome and much needed addition to the literature on survey data quality in social research McNabb's book examines the most common sources of nonsampling error frame error measurement error response error nonresponse error and interviewer error Offering the only comprehensive and non technical treatment available the book's focus on controlling error shows readers how to eliminate the opportunity for error to occur and features revealing examples of past and current efforts to control the incidence and effects of nonsampling error Most importantly it gives readers the tools they need to understand identify address and prevent the most prevalent and difficult to control types of survey errors

Nonsampling Error David E. McNabb, 2020 All surveys are susceptible to two broad classes of errors sampling error and nonsampling error both of which can result in false or biased information Sampling or random error refers to the amount by which the selected sample finding deviates from data that would have been obtained if the entire population were surveyed Nonsampling error is all the other errors that might confound the survey results Together the two types constitute total survey error Because either class of error can significantly reduce the usefulness of the results of a survey both sampling and nonsampling errors must be controlled This entry focuses on nonsampling error of which much less is known
