Handbook of Assessment in Childhood Psychopathology Cynthia L. Frame, Johnny L. Matson, 2013-11-21 One of the most important practical problems in child psychology and psychia try is the differential diagnosis of emotional disorders Until recently the gener al mode of assessment had been to apply to children the characteristics of psychopathology that were evident in adults In addition there had been few assessment tools available for use with children aside from modified versions of adult instruments Understandably this approach was controversial and dissat isfaction with it led to the more recent knowledge that adult and child problems may be manifested quite differently The third edition of the Diagnostic and Statistical Manual of Mental Disorders takes these factors into account much more extensively than previous editions Furthermore a great deal of research on methodology in child assessment procedures has emerged recently Yet in spite of these advances practicing clinicians are still frequently at a loss in moving from the characteristics of the disturbed child before them to the final assign ment of a psychiatric diagnosis The focus of this book is to outline the various methods of viewing and categorizing the wide range childhood psycho pathology with special emphasis on the end product of making a differential diagnosis Our goal was to make this book unique in several ways First we attempted to cover a wider range of disorders than is typical in currently available hand books

Juvenile Psychiatry and the Law Richard Rosner, Harold I. Schwartz, 2012-12-06 I am not sure when a series of volumes becomes an institution this is the fourth annual volume of Critical Issues in American Psychiatry and the Law and each has been an extraordinary summary of important forensic topics This book makes the point that the interface of psychiatry and law is not merely a legal one but has a great deal to do with clinical issues such as diagnosis and treatment Children and adolescents are not adults This may come as something of a shock to those who proselytize for equal rights for children and to those adults including some psychiatrists attorneys and judges who advocate giving the child adult choices and or responsibilities Children differ from adults in many ways The specialist in child or adolescent psychiatry knows not only that one must attend to special social and family issues for juveniles but that juveniles are more complex internally as well They attempt to survive in the world while rapidly growing and learning usually with physically and emotionally immature resources They have had few years in which to develop experience and do not have the psyche with which to integrate that experience in ways one would expect of a mature adult Sometimes this frightens the patient as in the case of a physically large teenager whose impulse control is impaired Sometimes it is frustrating as in the case of a healthy child unable to escape from a dysfunctional family It is always confusing and usually uncomfortable

Using Self Psychology in Psychotherapy Helene Jackson, 1994-03-01 Self psychology offers a new perception of how pathology develops It emerges not from intrapsychic conflict but from the pervasive absence of empathically responsive selfobject in the child s inner and outer world The goal of this book is to familiarize mental health professionals with this new approach to human behavior and demonstrate its implications for treatment in various stages of development and in a broad range of situations Mental health professionals who are familiar with the concepts of self psychology will find this book useful in expanding their treatment ideas For those who are unfamiliar with self psychology this material will provide new different exciting and effective ways of thinking about patients and intervening in the treatment relationship
