Evidence-Based Neurological Disorders Sushil Kumar Upadhyay, Siddhartha Dan, Sheikh Abid Ali, 2024-06-07

Neurology is one of the most fascinating areas of medical science and general biology but it has traditionally been limited to some dedicated aspects only. However, modern neuroscience has embarked on exciting and diverse frontiers related to the causes, diagnosis and treatment of neurological disease, and nowadays neurology has become multidisciplinary. There are many books available that deal with only one key concept of neurology, but a book with a multidisciplinary approach is lacking so far. This book emphasizes all the conventional and applied divisions associated with neurology in reference to medical physiology and general biology and covers all aspects to integrate the topics of inter-related approaches. It provides complete information on each aspect of neurodegenerative disorders and brain injury, including autonomic nervous system, neuro-oncology, cerebellar ataxias, spinal cord disorders, neuro-ophthalmic disorders and neuro-otological disorders such as dizziness, vertigo, imbalance and hearing impairments in a concise and informative way. It highlights the challenges related to neurological disorders along with their ongoing molecular mechanisms and treatments. The book provides simple and reader-friendly representations and artwork that will help in understanding the concepts.

Endocannabinoid Regulation of Monoamines in Psychiatric and Neurological Disorders Elisabeth J. Van Bockstaele, 2013-07-07. The past decade has seen tremendous growth in the study of cannabinoid receptor signaling in brain. The impact and consequences of cannabinoid modulation of monoaminergic dopamine, norepinephrine and serotonin circuits is becoming more clear. Scientists have shown significant interaction between these two systems in a variety of psychiatric and neurological disorders such as affective disorders, multiple sclerosis and pain or pain disorders. The overarching goal of *Endocannabinoid Regulation of Monoamines in Psychiatric and Neurological Disorders* is to provide current information on advances in the field of endocannabinoid signaling and potential therapeutic applications with a particular emphasis on monoaminergic circuits.

Neuroprotective Effects of Phytochemicals in Neurological Disorders Tahira Farooqui, Akhlaq A. Farooqui, 2017-01-03. Phytochemicals are naturally occurring bioactive compounds found in edible fruits, plants, vegetables and herbs. Unlike vitamins and minerals, phytochemicals are not needed for the maintenance of cell viability but they play a vital role in protecting neural cells from inflammation and oxidative stress associated with normal aging and acute and chronic age-related brain diseases. *Neuroprotective Effects of Phytochemicals in Neurological Disorders* explores the advances in our understanding of the potential neuroprotective benefits that these naturally occurring chemicals contain. *Neuroprotective Effects of Phytochemicals in Neurological Disorders* explores the role that a number of plant-based chemical compounds play in a wide variety of neurological disorders. Chapters explore the impact of phytochemicals on neurotraumatic disorders such as stroke.

and spinal cord injury alongside neurodegenerative diseases such as Alzheimer's and Parkinson's Disease as well as neuropsychiatric disorders such as depression and schizophrenia. The chapters and sections of this book provide the reader with a big picture view of this field of research. **Neuroprotective Effects of Phytochemicals in Neurological Disorders** aims to present readers with a comprehensive and cutting edge look at the effects of phytochemicals on the brain and neurological disorders in a manner useful to researchers, neuroscientists, clinical nutritionists and physicians. Brain connectivity in neurological disorders Alessandro Salvalaggio, Maurizio Corbetta, Alessandra Griffa, Lorenzo Pini, 2023-10-25 *Essential Guide to Neurodegenerative Disorders* Wael Mohamed, 2024-11-24 **Handbook of Neurodegenerative Disorders: Mechanism, Diagnostic and Therapeutic Advances** provides a comprehensive review on the current biomedical studies aimed at identifying the underlying causes of neurodegeneration. This book reviews the most recent developments in molecular and cellular processes altered during neurodegeneration. Divided into four parts, the first covers the mechanism of cell death in neurodegeneration. The second section reviews the recent progress in gene and gene products in neurodegeneration, including Huntington's disease, Parkinson's disease, Friedreich's ataxia and spinal muscular atrophy. The final sections cover the current and future diagnostic techniques of neurodegenerative disorders along with therapeutic approaches. **Reviews big data and neurodegeneration disorders including gene mapping**. Examines the structural basis of protein assembly into amyloid filaments in neurodegenerative disease. Covers the progress and challenges of pharmacotherapy of neurodegenerative disorders. **Biomarkers of Brain Injury and Neurological Disorders** Kevin K. W. Wang, Zhiquan Zhang, Firas H. Kobeissy, 2014-10-28. This book explores the recent advances in the techniques and platforms used in biomarker research that have revolutionized the way we study, diagnose and treat brain injury conditions. The contributors describe different biomarker studies pertaining to brain injury and other neurological disorders and analyze the different models and technologies. **Global status report on neurology** World Health Organization, 2025-10-12. Neurological conditions are the leading cause of ill health and disability affecting over 1 in 3 people worldwide. The Global status report on neurology presents the first comprehensive global assessment of the public health response to neurological disorders under the Intersectoral global action plan on epilepsy and other neurological disorders. 2022. 31 IGAP Drawing on data from 102 WHO Member States representing 71% of the world population, the report sets 2022 baseline values for the 10 global targets of IGAP. It captures the global status across governance and advocacy, financing, service delivery and workforce access to medicines and technologies, brain health promotion and disease prevention and research and information systems. The analysis reveals critical gaps and implementation barriers, underscoring the urgent need for bold and coordinated action to achieve IGAP targets by 2031. To accelerate progress, the report offers inclusive evidence-based and actionable recommendations for policymakers, IGAP partners and the global neurology community, ensuring that people with neurological conditions and their families are at the heart of the response.
