sector delivery of state services is increasingly common worldwide and state forest plantation management is no exception Increasingly governments are transferring rights and responsibilities to the private sector for state owned plantations Some claim that this is the road to achieving sustainable forest management greater contributions to local livelihoods and poverty reduction others disagree This book examines the evidence and explores the many issues raised by these changing relationships between the state the private sector and local livelihoods Experiences from around the world are described through seven case studies from Australia China Chile India New Zealand South Africa and the United Kingdom and key lessons and clear guidance are provided on how governments can best achieve a balance between private and public involvement while continuing to deliver the key social goods and services expected by all citizens **Global Rangelands A.**

C. Grice, K. C. Hodgkinson, 2002-07-29 Although traditionally defined as areas where natural vegetation is exploited for grazing by domestic and native herbivores rangelands are used by many different people for a host of purposes As well as livestock products rangelands provide fuels minerals and water and are used for ecotourism recreation nature conservation and as carbon sinks More than half of the earth's land surface is rangeland and millions of people both within and outside the rangelands depend on them This book addresses the important issues confronting the rangelands and presents new concepts and approaches for the management of rangeland resources It is relevant to the people who live in or depend on the rangelands and to the institutions and organisations that support them **Transactional Memory. Algorithms, Tools, and Applications Rachid Guerraoui, Paolo Romano, 2014-12-29 The advent of multi core architectures and cloud computing has brought parallel programming into the mainstream of software development Unfortunately writing scalable parallel programs using traditional lock based synchronization primitives is well known to be a hard time consuming and error prone task mastered by only a minority of specialized programmers Building on the familiar abstraction of atomic transactions Transactional Memory TM promises to free programmers from the complexity of conventional synchronization

schemes simplifying the development and verification of concurrent programs enhancing code reliability and boosting productivity Over the last decade TM has been subject to intense research on a broad range of aspects including hardware and operating systems support language integration as well as algorithms and theoretical foundations On the industrial side the major players of the software and hardware markets have been up front in the research and development of prototypal products providing support for TM systems This has recently led to the introduction of hardware TM implementations on mainstream commercial microprocessors and to the integration of TM support for the world's leading open source compiler In such a vast inter disciplinary domain the Euro TM COST Action IC1001 has served as a catalyzer and a bridge for the various research communities looking at disparate yet subtly interconnected aspects of TM This book emerged from the idea having Euro TM experts compile recent results in the TM area in a single and consistent volume Contributions have been carefully selected and revised to provide a broad coverage of several fundamental issues associated with the design and implementation of TM systems including their theoretical underpinnings and algorithmic foundations programming language integration and verification tools hardware supports distributed TM systems self tuning mechanisms as well as lessons learnt from building complex TM based applications

The Politics of Privatisation and Trade Union Mobilisation Pablo Ghigliani,2010 This is a comparative study of how workers and their unions respond to privatisation Drawing upon research from a variety of disciplines the author examines the push toward privatisation in diverse national settings its profound impact on organised labour and the often innovative responses of workers and their unions in the affected industries By means of a detailed analysis of the privatisation of the electricity industries in the United Kingdom and Argentina and the various initiatives of workers and their trade unions in these two countries this book offers an engaging comparative case study that sheds new light on key issues in contemporary labour studies the strategic choices available to workers and their organisations when faced with the radical restructuring of their industries the types of resources available to trade unions and how they are mobilised and the impact of widespread worker unrest on their organisations This book also provides fresh insight into the use of mobilisation theory in the field of labour studies The author employs mobilisation theory to make sense of worker and trade union responses to privatisation and he argues that this theoretical framework can be useful for cross national comparisons
