Religion In A Technical Age:

Religion in a Technical Age Samuel H. Miller, *Religion in a Technical Age* Samuel Howard Miller, 1968 **Religion and the Technological Future** Calvin Mercer, Tracy J. Trothen, 2021-02-22 We live in an age of rapid technological advancement. Never before has humankind wielded so much power over our own biology. Biohacking: the attempt at human enhancement of physical, cognitive, affective, moral, and spiritual traits has become a global phenomenon. This textbook introduces religious and ethical implications of biohacking, artificial intelligence, and other technological changes, offering perspectives from monotheistic and karmic religions and applied ethics. These technological breakthroughs are transforming our societies and ourselves fundamentally via genetic modification, tissue engineering, artificial intelligence, robotics, the merging of computer technology with human biology, extended reality, brain stimulation, and nanotechnology. The book also considers the extreme possibilities of mind uploading, cryonics, and superintelligence. Chapters explore some of the political, economic, sociological, and psychological dimensions of these advances, with bibliographies for further study and questions for discussion. The technological future is here, and it is up to us to decide its moral and religious shape. *Handbook of the Geographies of Religion* Lily Kong, Orlando Woods, Justin K.H. Tse, 2024-12-02 This international and interdisciplinary handbook offers a comprehensive and in-depth overview of contemporary research, theory, and practice in the geographies of religion in various parts of the world and with different populations. The book showcases the major theoretical interventions in the field and the debates about the existential constitution of sacred space and what this means for secularization. It outlines the most significant geographical themes related to these new developments with their implications for how to think about landscapes, space, bodies, and worlds. The book also discusses the future of the field, especially in the realms of encounters and ethics, economies and markets, institutions and organisations, movements and migrations, and media and mediums. It also offers views from disciplines outside of geography, including sociology, anthropology, religious studies, and media and communications, which demonstrates the contributions of geographers of religion to wider intellectual conversations and debates. **Religion and Technology in the 21st Century: Faith in the E-World** George, Susan Ella, 2006-05-31 This book examines the unique synergy between religion and technology and explores the many ways that technology is shaping religious expression as well as ways that religion is coming to influence technology. Provided by publisher. Technology and the Philosophy of Religion David Lewin, 2010-09-13 The last one hundred years has seen unimaginable technological progress transforming every aspect of human life. Yet we seem unable to shake a profound unease with the direction of modern technology and its ideological siblings: global capitalism and massive consumption. Philosophers such as Marcuse, Borgmann, and especially Heidegger have developed important analyses of technological society; however, in this book David Lewin argues that their ideas have remained limited, either by their secular context or by the narrow conception of religion that they do allow. This study guides the reader along the newly formed paths of the

philosophy of technology arguing that where those paths come to an abrupt end a religious discourse is needed to articulate the ultimate concerns that drive technological action It calls for a meditation on the central insight of many religious traditions that in an ultimate sense we know not what we do To acknowledge that we know not what we do is the first step towards a theology of technology that draws upon insights from the mystical theological tradition as well as from recent developments in the continental philosophy of religion

The Vienna Circle and Religion Esther Ramharter, 2022-03-08 This book is the first systematic and historical account of the Vienna Circle that deals with the relation of logical empiricists with religion as well as theology Given the standard image of the Vienna Circle as a strong anti metaphysical group and non religious philosophical and intellectual movement this book draws a surprising conclusion namely that several members of the famous Moritz Schlick Circle e g the left wing with Rudolf Carnap Otto Neurath Philipp Frank Edgar Zilsel but also Schlick himself dealt with the dualisms of faith belief and knowledge religion and science despite or because of their non cognitivist commitment to the values of Enlightenment One remarkable exception was the philosopher and Rabbi Joseph Schchter who wrote explicitly on religion and philosophy after the linguistic turn The book also covers another puzzling figure the famous logician Kurt G del who wrote on theology and the ontological proof of God in his so far unpublished notebooks The book opens up new perspectives on the Vienna Circle with its internal philosophical and political pluralism and is of value to philosophers historians and anybody who is interested in the relation between science and religion

Technology and Values Kristin Shrader-Frechette, Laura Westra, 1997-10-30 Technology and Values provides a highly useful collection of essays organized around issues related to science technology public health economics the environment and ethical theory The editors present effective introductions that provide background information as well as philosophical tools and case studies to facilitate understanding of the variety of issues emanating from the most significant developments in technology including the effects on privacy of the widespread use of computers to store and retrieve personal information and the ethical considerations of genetic engineering

Religion After Metaphysics Mark A. Wrathall, 2003-11-27 How should we understand religion and what place should it hold in an age in which metaphysics has come into disrepute The metaphysical assumptions which supported traditional theologies are no longer widely accepted but it is not clear how this end of metaphysics should be understood nor what implications it ought to have for our understanding of religion At the same time there is renewed interest in the sacred and the divine in disciplines as varied as philosophy psychology literature history anthropology and cultural studies In this volume leading philosophers in the United States and Europe address the decline of metaphysics and the space which this decline has opened for non theological understandings of religion The contributors include Richard Rorty Charles Taylor Jean Luc Marion Gianni Vattimo Hubert Dreyfus Robert Pippin John Caputo Adriaan Peperzak Leora Batnitzky and Mark Wrathall

Pottenger,2020-01-29 This book discusses the evolution of three philosophical foundations from the twelfth through the eighteenth centuries that converged to form the basis of liberal democracy s approach to the place and role of religion in society and politics Identified by the author as a religious axis the period of convergence promoted rational and empirical

investigation enabled the development of diverse religious beliefs and affirmed religious liberty and expressions amidst pluralist politics The author shows that the religious axis three philosophical foundations epistemic axiological and political undergird the political architecture of American liberal democracy that designed a containment structure to protect a vast array of religious expressions and encourage their presence in the public square Moreover the structure embodied a democratic ethos that drives religious and political pluralism but within limits The author argues that this containment structure has paradoxically ignited frenzied fires of faith that politically threaten the structure s own limits

The Future of Religion and the Religion of the Future Theodore John Rivers, 2011-11-25 In *The Future of Religion and the Religion of the Future* Theodore John Rivers explores the changing relationship between technology and religion Rivers draws upon his expertise in the fields of medieval and religious history to discuss how the promotion of Christianity and monasticism in the Middle Ages began a process that has lent religious undertones to the way in which we interact with modern technology Rivers ultimately suggests that the growing presence of technology makes it a likely candidate for the next religious form competing with all the major religions in place today
