Science and Technology for Disposal of Radioactive Tank Wastes Wallace W. Shulz, Nicholas J. Lombardo, 2013-11-11

Radioactive wastes resulting from over 40 years of production of nuclear weapons in the U S are currently stored in 273 underground tanks at the U S Department of Energy Hanford site Idaho National Engineering and Environmental Laboratory Oak Ridge Reservation and Savannah River site Combined tanks at these sites contain approximately 94 000 000 gallons of waste in a variety of forms including liquid concrete like salt cake and various sludges More than 730 000 000 curies of several radioactive isotopes are present in the underground tanks Certainly one of the greatest challenges facing the U S Department of Energy is how to characterize retrieve treat and immobilize the great variety of tank wastes in a safe timely and cost effective manner For several years now the U S Department of Energy has initiated and sponsored scientific and engineering studies tests and demonstrations to develop the myriad of technologies required to dispose of the radioactive tank wastes In recent times much of the Department of Energy Responsibility for technical operations of the TF A has been assigned to the Pacific Northwest National Laboratory

DOE Tank Waste How clean is clean enough The U S Congress asked the National Academies to evaluate the Department of Energy's DOE's plans for cleaning up defense related radioactive wastes stored in underground tanks at three sites the Hanford Site in Washington State the Savannah River Site in South Carolina and the Idaho National Laboratory DOE plans to remove the waste from the tanks separate out high level radioactive waste to be shipped to an off site geological repository and dispose of the remaining lower activity waste onsite The report concludes that DOE's overall plan is workable but some important challenges must be overcome including the removal of residual waste from some tanks especially at Hanford and Savannah River The report recommends that DOE pursue a more risk informed consistent participatory and transparent for making decisions about how much waste to retrieve from tanks and how much to dispose of onsite The report offers several other detailed recommendations to improve the technical soundness of DOE's tank cleanup plans
