Science And Theology:

Issues in Science and Religion Ian G. Barbour, 1966 First published 1966 Includes index Includes bibliographical references Campion Collection Science and Religion Around the World John Hedley Brooke, Ronald L. Numbers, 2011-01-14 The past quarter century has seen an explosion of interest in the history of science and religion But all too often the scholars writing it have focused their attention almost exclusively on the Christian experience with only passing reference to other traditions of both science and faith At a time when religious ignorance and misunderstanding have lethal consequences such provincialism must be avoided and in this pioneering effort to explore the historical relations of what we now call science and religion the authors go beyond the Abrahamic traditions to examine the way nature has been understood and manipulated in regions as diverse as ancient China India and sub Saharan Africa Science and Religion around the World also provides authoritative discussions of science in Judaism Christianity and Islam as well as an exploration of the relationship between science and the loss of religious beliefs The narratives included in this book demonstrate the value of plural perspectives and of the importance of location for the construction and perception of science religion relations *Religion and Science* Ian G. Barbour, 2013-02-12 Religion and Science is a definitive contemporary discussion of the many issues surrounding our understanding of God and religious truth and experience in our understanding of God and religious truth and experience in our scientific age This is a significantly expanded and freshly revised version of Religion in an Age of Science winner of the American Academy of Religion Award for Excellence and the Templeton Book Award Ian G Barbour the premier scholar in the field has added three crucial historical chapters on physics and metaphysics in the seventeenth century nature and God in the eighteenth century and biology and theology in the nineteenth century He has also added new sections on developments in nature centered spirituality information theory and chaos and complexity theories **The Big Questions in Science and Religion** Keith Ward, 2008-05 Can religious beliefs survive in the scientific age Are they resoundingly outdated Or is there something in them of great importance even if the way they are expressed will have to change given new scientific context These questions are among those at the core of the science religion dialogue An Anglican priest who was once an atheist offers compelling insights into the often contentious relationship between diverse religious views and new scientific knowledge He identifies ten basic questions about the nature of the universe and human life Among these are Does the universe have a goal or purpose Do the laws of nature exclude miracles Can science provide a wholly naturalistic explanation for moral and religious beliefs Has science made belief in God obsolete Are there any good science based arguments for God Ward considers concepts from Buddhism Confucianism Taoism Islam Hinduism Judaism and Christianity while featuring the speculations of cosmologists physicians mathematicians and philosophers Issues in Science and Theology: Nature – and Beyond Michael Fuller, Dirk Evers, Anne Runehov, Knut-Willy Sæther, Bernard Michollet, 2020-02-25 This book addresses a variety of important questions on nature science and spirituality Is the natural

world all that there is Or is it possible to move beyond nature What might it mean to transcend nature What reflections of anything beyond nature might be found in nature itself Gathering papers originally delivered at the 2018 annual conference of the European Society for the Study of Science and Theology ESSSAT the book includes contributions of an international group of scientists philosophers theologians and historians all discussing nature and what may lie beyond it More than 20 chapters explore questions of science nature spirituality and more including Nature and Beyond Immanence and Transcendence in Science and Religion Awe and wonder in scientific practice Implications for the relationship between science and religion The Cosmos Considered as a Moral Institution The transcendent within how our own biology leads to spirituality Preserving the heavens and the earth Planetary sustainability from a Biblical and educational perspective Issues in Science and Theology Nature and Beyond will benefit a broad audience of students scholars and faculty in such disciplines as philosophy history of science theology and ethics

Science in Theology Neil Messer, 2020-07-23 If we wish to understand ourselves and the world in relation to God what contribution to our understanding should we expect from a Christian tradition with its roots in the Bible and what should we expect from the natural sciences Neil Messer sets out five types of answer to that question The responses range from the view that the Christian tradition has nothing to contribute through various forms of dialogue to the claim that science is irrelevant to theological understanding This classification scheme is illustrated and tested by extended explorations of three topics in the science and theology field how to think about God's action in the world how to make theological sense of the suffering and destruction involved in the evolution of life and how theology should respond to the scientific study of religion The classification offers a way to understand and evaluate these debates and the discussion of specific examples demonstrates the strengths and weaknesses of each type of approach The book concludes with suggestions for how readers might use this scheme to guide their own work on science and theology For students and researchers in science and theology this book offers three things a tool for understanding specific debates in science and theology critical surveys of some of the most important debates in the field and a concise guide to ways of setting up encounters of theology with science

Faith, Science and Understanding J. C. Polkinghorne, 2001-01-01 In this captivating book one of the most highly regarded scientist theologians of our time explores aspects of the interaction of science and theology John Polkinghorne defends the place of theology in the university it is part of the human search for truth and discusses the role of revelation in religion it is a record of experience and not the communication of unchallengeable propositions Throughout his thought provoking conversation Polkinghorne speaks with an honesty and openness that derives from his many years of experience in scientific research A central concern of Polkinghorne's collection of writings is to reconcile what science can say about the processes of the universe with theology's belief in a God active within creation The author examines two related concepts in depth The first is the divine self limitation involved in creation that leads to an important reappraisal of the traditional claim that God does not act as a cause among causes The other is the

nature of time and God's involvement with it an issue that Polkinghorne shows can link metascience and theological understandings In the final section of the book the author reviews three centuries of the science and theology debate and assesses the work of major contemporary contributors to the discussion Wolfhart Pannenberg Thomas Torrance and Paul Davies He also considers why the science theology discussion has for several centuries been a particular preoccupation of the English

The Relevance of Natural Science to Theology W.H. Austin, 1976-06-18 This book is an attempt to show that the common belief that natural science is in principle irrelevant to theological doctrines is ill founded and to explore some of the ways in which science might bear on theology The main arguments for the irrelevance thesis are examined in some detail and in each case found either to be unsound or to support only a restricted version of the thesis A distinction is drawn between direct relevance of scientific theories and scientifically established facts to theological doctrines i e the former either contradict or lend evidential support to the latter and various forms of indirect relevance It is then suggested that arguments for the irrelevance thesis are of two main types One type is based on an instrumentalist interpretation either of scientific theories as in Pierre Duhem or of religious beliefs as in R B Braithwaite In neither case it is argued here is an instrumentalist interpretation satisfactory and in both cases even if an instrumentalist interpretation is adopted science can bear on theology in important indirect ways The other main way of arguing for the irrelevance of science to theology depends on specifying distinct and mutually exclusive realms with which they are respectively concerned But ways of doing this which are sufficiently sophisticated to be plausible prove difficult to formulate coherently In this connection the approach of existentialist theologians exemplified by Karl Heim is studied as in the contrast drawn also by some linguistic philosophers between the objectivity of science and the personal commitment required by religious beliefs By way of summary and application a brief study of the doctrine of divine providence is then made in which it is argued that contemporary theologians difficulties with this doctrine result in large part from their efforts so to define theology as to exclude any possible bearing upon it of natural science Publisher

A History of the Warfare of Science with Theology in Christendom Andrew Dickson White, 1913

Science, Theology, and Ethics Ted Peters, 2017-03-02 Science challenges faith to seek fuller understanding and faith challenges science to be socially and ethically responsible This book begins with faith in God the Creator of the world and then expands our understanding of creation in light of Big Bang cosmology and new discoveries in physics Examining the expanding frontier of genetic research Ted Peters draws out implications for theological understandings of human nature and human freedom Issues discussed include methodology in science and theology eschatology in cosmology and theology freedom and responsibility in evolution and theology and genetic determinism genetic engineering and cloning in relation to freedom the commodification of human life and equitable distribution of the fruits of genetic technology The dialogue model of relationship between science and religion proposed in this book provides a common ground for the disparate voices among theologians scientists and world religions This common ground has the

potential to breathe new life into current debates about the world in which we live move and have our being
