Science Computers And The Information Onslaught A Collection Of Essays:

Science, Computers, and the Information Onslaught Donald M. Kerr, Karl Braithwaite, N. Metropolis, 2014-05-10 Science Computers and the Information Onslaught A Collection of Essays covers the proceedings of the 1981 meeting on Science and the Information Onslaught held at Los Alamos New Mexico This book is organized into five parts encompassing 19 chapters The first part deals with the problems of measurement and the uses of information in decisions concerning national security This part also emphasizes the dependence of survival on technological progress The next part examines the foundations of information theory the interaction between psychological concepts and the mathematical theories of automata and the major problems in robotics These topics are followed by discussions of the efforts to codify languages in formal grammatical systems and the past misuse of irrelevantly detailed information in decision making specifically the use and misuse of information in government decisions about technological projects The remaining parts consider the project of enhancing human abilities by the insertion of silicon chips in the body These parts also assess the implications of a microelectronic technology capable of producing chips bearing millions of logically active circuit elements Accounts of cryptanalytic successes in World War II are also included This book will be of value to mathematicians physicists linguists and computer scientists

Synthesizing Systems Anna Darden Copeland, 2007-02-22 The purpose of this dissertation is to introduce a general reading audience to the major themes found in the fiction of Richard Powers with an emphasis on his use of science For Powers science is something more than the accumulation of technical data and the proliferation of theories developed to explain physical phenomena It is an evolving body of knowledge which has important insights to contribute into the conditions which ground human experience The close and often detailed discussions of contemporary issues in science which Powers incorporates into his fiction indicate the extent to which he sees science as an inseparable component in any attempt to understand the complexities of human experience The common ground Powers uses to link the interests of science and those of fiction into a balanced if not always harmonious pursuit of truth is wonder The limitations placed on science during this century do not undermine the ability of science to influence what we can know Nor do these limitations diminish the ability of science to inspire wonder Quite the opposite For Powers the true wonder of the human intellect rests in our remarkable ability to balance observation and interpretation What he discovers again and again in his fiction is that science like literature is a product of the human imagination a way to mediate between the world and our perceptions of it The recognition that science is a cultural practice a body of knowledge thoroughly imbued with the practices and prejudices of its historical surroundings is a necessary first step in mending the rift separating science and literature head and heart The greatest insight of twentieth century science may just be the recognition that there are other ways to access the truth Richard Powers skillful weaving of science and art is a testament that literature offers a unique vantage point from which we might learn something of value about ourselves and the world we inhabit
