This provocative collection of chapters is a presentation in gutsiness. Ingenious in construction and sequencing, this book will influence science teacher educators by introducing them to issues of equity and social justice directly related to women and people of color. The authors unflinchingly interrogate issues of equity which need to be addressed in science education courses. It begins with setting current cultural and equity issues within a historic frame. The first chapter sets the scene by moving the reader through 400 years in which African Americans were scientifically excluded from science. This is followed by a careful review of the Jim Crow era, an analysis of equity issues of women, and ends with an examination of sociocultural consciousness and culturally responsive teaching. Two chapters comprise the second section. Each chapter examines the role of the science teacher in providing a safe place by promoting equity and social justice in the classroom. The three chapters in the third section focus on secondary science teachers. Each addresses issues of preparation that provides new teachers with understanding of equity and provokes questions of good teaching. Section four enhances and expands the first section as the authors suggest cultural barriers, the impact of STEM engagement by marginalized groups. The last section, composed of three chapters, interrogates policy issues that influence the science classroom. Molly Weinburgh, Texas Christian University, Fort Worth, USA.

Culture: A Drama of Nature and Person Piotr Jaroszyński, 2023-12-11. This monograph represents a rare classical philosophical approach to culture. It is grounded in philosophical realism and emphasizes personalism as a true achievement of philosophical anthropology. Employing the apparatus of the history of philosophy, science, and religion, the author demonstrates the immense scope of the drama unfolding within human culture. In a classical approach, evaluation is inevitable with regard to various theories of culture: human culture as such and all its main actors. Jaroszyński's work shows

that realistic study of what it means to be a human person leads to the most comprehensive understanding of culture as it is and should be **Science Education for Australian Students** Angela Fitzgerald, Deborah Corrigan, 2020-07-16 In this ground breaking book science education is explored as a learning continuum across all years of schooling from Foundation to Year 12 The expert authors members of Monash University s Science Education Research Group seek to build pedagogical and content expertise by providing both a level of support and challenge for all teachers based on current research and best practice The text considers key issues including what the learner brings to the science classroom what primary and secondary teachers can learn from each other the constructivist perspective and its value in learning science context based science education the structure of the Australian curriculum and science education policy teacher identity the nature of scientific knowledge principles of assessment and understanding the role of ICT in science teaching and learning Featuring case studies and practical examples in each chapter this book provides pre service teachers with the understanding and tools to ensure their students are engaged and inspired in science education throughout their school years
