Science Policy Ethics And Economic Methodology:

Science Policy, Ethics, and Economic Methodology Kristin Shrader-Frechette, 2012-12-06 If indeed scientists and technologists especially economists set much of the agenda by which the future is played out and I think they do then the student of scientific methodology and public ethics has at least three options He can embrace certain scientific methods and the value they hold for social decisionmaking much as Milton Friedman has accepted neoclassical economics Or he can condemn them regardless of their value much as Stuart Hampshire has rejected risk cost benefit analysis RCBA Finally he can critically assess these scientific methods and attempt to provide solutions to the problems he has uncovered As a philosopher of science seeking the middle path between uncritical acceptance and extremist rejection of the economic methods used in policy analysis I have tried to avoid the charge of being anti science Fred Hapgood in response to my presentation at a recent Boston Colloquium for the Philosophy of Science said that my arguments felt like a call for rejection of the methods of risk cost benefit analysis Not so as Chapter Two of this volume should make eminently clear All my criticisms are constructive ones and the flaws in economic methodology which I address are uncovered for the purpose of suggesting means of making good techniques better Likewise although I criticize the economic methodology by which many technology assessments TAs and environmental impact analyses EIA s have been used to justify public projects it is wrong to conclude that I am anti technology Science policy, ethics, and economic methodology , 1985 **Science Policy, ethics, and economic methodology** Kristin S. Shrader-Frechette, 1984-12-31 **Science, Technology and Society** Wenceslao J. González, 2005 The emphasis on the realm of Science Technology and Society or Science and Technology Studies may have the same degree of relevance that the historical turn had in the past It is a social turn which affects philosophy of science as well as philosophy of technology It includes a new vision of the aims processes and results of scientific activities and technological doings because the focus of attention is on several aspects of science and technology which used to be considered as secondary or even irrelevant This turn highlights science and technology as social undertakings rather than intellectual contents According to this new vision there are several important changes as to what should be studied the objects of research how it should be studied the method and what the consequences for those studies are The new focus of attention can be seen in many changes and among them are several of special interest a from what science and technology are in themselves mainly epistemic contents to how science and technology are made largely social constructions b from the language and structure of basic science to the characteristics of applied science and the applications of science c from technology as a feature through which human beings control their natural surroundings a step beyond technics due to the contribution of science to technology as a social practice and an instrument of power and d from the role of internal values necessary for mature science and innovative technology to the role of contextual or external values cultural political economic of science and technology Wenceslao J Gonzalez is professor of logic and philosophy of science at the University of
