NOTE Series number is not an integer n a **The Common Sense of Science** Jacob Bronowski, 1953 Discusses science as a characteristic part of human activity and as an effort to render the world predictable **The Common Sense of Science** Jacob Bronowski, 1951 **Everything is Obvious** Duncan J. Watts, 2011-07-01 Why is the Mona Lisa the most famous painting in the world Why did Facebook succeed when other social networking sites failed Did the surge in Iraq really lead to less violence And does higher pay incentivize people to work harder If you think the answers to these questions are a matter of common sense think again As sociologist and network science pioneer Duncan Watts explains in this provocative book the explanations that we give for the outcomes that we observe in life explanations that seem obvious once we know the answer are less useful than they seem Watts shows how commonsense reasoning and history conspire to mislead us into thinking that we understand more about the world of human behavior than we do and in turn why attempts to predict manage or manipulate social and economic systems so often go awry Only by understanding how and when common sense fails can we improve how we plan for the future as well as understand the present an argument that has important implications in politics business marketing and even everyday life **Science and Common Sense**, 1953 **Common Sense and Science from Aristotle to Reid** Benjamin W. Redekop, 2020-11-05 Common Sense and Science from Aristotle to Reid reveals that thinkers have pondered the nature of common sense and its relationship to science and scientific thinking for a very long time It demonstrates how a diverse array of neglected early modern thinkers turn out to have been on the right track for understanding how the mind makes sense of the world and how basic features of the human mind and cognition are related to scientific theory and practice Drawing on a wealth of primary sources and scholarship from the history of ideas cognitive science and the history and philosophy of science this book helps readers understand the fundamental historical and philosophical relationship between common sense and science **Science and Common Sense** James B. Conant, 1981-06
Scientific Challenges to Common Sense Philosophy Rik Peels, Jeroen de Ridder, René van Woudenberg, 2020-05-27
Common sense philosophy holds that widely and deeply held beliefs are justified in the absence of defeaters While this tradition has always had its philosophical detractors who have defended various forms of skepticism or have sought to develop rival epistemological views recent advances in several scientific disciplines claim to have debunked the reliability of the faculties that produce our common sense beliefs At the same time however it seems reasonable that we cannot do without common sense beliefs entirely Arguably science and the scientific method are built on and continue to depend on common sense This collection of essays debates the tenability of common sense in the face of recent challenges from the empirical sciences It explores to what extent scientific considerations rather than philosophical considerations put pressure on common sense philosophy The book is structured in a way that promotes dialogue between philosophers and scientists

Noah Lemos one of the most influential contemporary advocates of the common sense tradition begins with an overview of the nature and scope of common sense beliefs and examines philosophical objections to common sense and its relationship to scientific beliefs Then the volume features essays by scientists and philosophers of science who discuss various proposed conflicts between commonsensical and scientific beliefs the reality of space and time about the nature of human beings about free will and identity about rationality about morality and about religious belief Notable philosophers who embrace the common sense tradition respond to these essays to explore the connection between common sense philosophy and contemporary debates in evolutionary biology neuroscience physics and psychology
