Science And Technology:

The Dynamics of Science and Technology W. Krohn, E.T. Layton Jr., P. Weingart, 2012-12-06 The interrelations of science and technology as an object of study seem to have drawn the attention of a number of disciplines the history of both science and technology sociology economics and economic history and even the philosophy of science The question that comes to mind is whether the phenomenon itself is new or if advances in the disciplines involved account for this novel interest or in fact if both are interconnected When the editors set out to plan this volume their more or less explicit conviction was that the relationship of science and technology did reveal a new configuration and that the disciplines concerned with its analysis failed at least in part to deal with the change because of conceptual and methodological preconceptions To say this does not imply a verdict on the insufficiency of one and the superiority of any other one disciplinary approach Rather the situation is much more complex In economics for example the interest in the relationship between science and technology is deeply influenced by the theoretical problem of accounting for the factors of economic growth The primary concern is with technology and the problem is whether the market induces technological advances or whether they induce new demands that explain the subsequent diffusion of new technologies Science is generally considered to be an exogenous factor not directly subject to market forces and therefore appears to be of no interest *Science and Technology* Erica Duran, Lauren Mecucci Springer, 2019-08-06 Science and Technology explores questions around the central concepts of STEM fields How do we interact with science and technology on a daily basis Is technology surpassing biology What are the ethics of science and technology Does technology rule our economy How is the internet changing society Readings by biologists climate scientists journalists ethicists novelists engineers and others take up these questions and more Questions and assignments for each selection provide a range of activities for students The Bedford Spotlight Reader Series is an exciting line of single theme readers each reflecting Bedford's trademark care and quality An editorial board of a dozen compositionists at schools with courses focusing on specific themes assists in the development of the series Each reader collects thoughtfully chosen selections sufficient for an entire writing course about 35 pieces to allow instructors to provide carefully developed high quality instruction at an affordable price Bedford Spotlight Readers are designed to help students from all majors make sustained inquiries from multiple perspectives opening up topics such as borders food gender happiness humor language monsters music subcultures and sustainability to critical analysis The readers are flexibly arranged in thematic chapters with each chapter focusing in depth on a different facet of the central topic The instructor resource tab of each reader's catalog page includes instructor support with sample syllabi and additional teaching resources Science and technology IV Antonio G.
