Science, Art and Nature in Medieval and Modern Thought A.C. Crombie, 1990-07-01 The author sees the history of Western Science as the history of a vision and an argument initiated by the ancient Greeks in their search for principles at once of nature and of argument itself This scientific vision explored and controlled by argument and the diversification of both vision and argument by scientific experience and by interaction with the wider contexts of intellectual culture constitute the long history of European scientific thought Underlying that development have been specific commitments to conceptions of nature and of science and its intellectual and moral assumptions accompanied by a recurrent critique their diversification has generated a series of different styles of scientific thinking and of making theoretical and practical decisions which the work describes

A Brave New World of Knowledge B. J. Sokol, 2003 This study of an extraordinary work of dramatic literature also addresses questions of the nature and dissemination of the scientific revolution These facets are locked together although the book does not deny that *The Tempest* had deep roots in classical literature and elsewhere it maintains that the play's remarkable dramaturgy and symbolism reflect subtle matters uniquely pertinent to its own fascinating time *A Brave New World of Knowledge* uncovers a number of previously little appreciated connections of *The Tempest* with specific problems or advances of knowledge thus showing that the play

reflected innovative proto scientific modes of confronting the physical biological and human realms It also argues that Shakespeare's play mirrored a new tendency to repudiate earlier Renaissance dreams of achieving omniscience and omnipotence The play reflected a newer hope for knowledge based on speculative boldness linked with close observation rational and sober precision and a radical capacity to accept limitation and not knowing **Homo Faber and Homo**

Economicus in the Scientific Revolution Ahmet Selami Çalışkan,2022-04-24 This book tells the story of how the servile arts turned into the mechanical arts which in turn developed into a kind of philosophical apparatus that made modern science possible Why did the scientific revolution take place in the West and not in China or the Islamic world How did humanity's progress in science and technology which had been moving along at a relatively steady pace for tens of thousands of years end up taking such an unprecedented leap Subjecting the history of thought and technology to a novel interpretation based on the relationship between theory and practice Ahmet Selami al kan argues that the industrial revolution and modern science and the scientific revolution that preceded both did not alone suffice to sort out the philosophical problems of their day or to produce the institutions of the modern age Both required a new sort of human Homo economicus faber Tracing the historical emergence of this figure and its persistence in our own age this book offers an innovative and holistic assessment of the economic cultural and political effects of centuries of interaction between East and West and their repercussions in our world today **Rethinking the Concept of Law of Nature** Yemima Ben-Menahem,2022-06-13 This book subjects the

traditional concept of law of nature to critical examination There are two kinds of reasons that invite this reexamination one deriving from philosophical concerns over the traditional concept the other motivated by theoretical and practical changes in science One of the philosophical worries is that the idiom of law of nature especially when combined with the notion of laws governing individual events and processes is no longer as intelligible as it used to be in the theistic context in which the formulation of laws became central to science The traditional concept is also challenged in various ways by contemporary scientific theories such as quantum mechanics chaos theory and the general theory of relativity It is no longer clear that there are any universal laws laws do not always guarantee predictability and the border between physical and mathematical considerations is constantly shifting The most difficult challenge perhaps is to come up with a scientific explanation of the origin of laws Wrestling with these intriguing problems the papers in this volume broaden both our understanding of the natural order and our desiderata of scientific explanation **Spectacle and Topophilia** David R. Exposition **Signs in the Dust** Nathan Lyons,2019-02-28 Modern thought is characterized by a dichotomy of meaningful culture and unmeaning nature Signs in the Dust uses medieval semiotics to develop a new theory of nature and culture that resists this familiar picture of things Through readings of Thomas Aquinas Nicholas of Cusa and John Poincaré John of St Thomas it offers a semiotic analysis of human culture in both its anthropological breadth as an enterprise of creaturely sign

making and its theological height as a finite participation in the Trinity which can be understood as an absolute cultural nature Signs in the Dust then extends this account of human culture backwards into the natural depth of biological and physical nature It puts the biosemiotics of its medieval sources along with Félix Ravaisson's philosophy of habit into dialogue with the Extended Evolutionary Synthesis that is emerging in contemporary biology to show how all living things participate in semiosis so that that a cultural dimension is present through the whole order of nature and the whole of natural history It also retrieves Aquinas doctrine of intentions in the medium to show how signification can be attributed in a diminished way to even inanimate nature with the ontological implication that being as such should be reconceived in semiotic terms The phenomena of human culture are therefore to be understood not as breaks with a meaningless nature but instead as heightenings and deepenings of natural movements of meaning that long precede and far exceed us Against the modern divorce of nature and culture Signs in the Dust argues that culture is natural and nature is cultural through and through

Chaucer and the Making of Optical Space Peter Brown, 2007 The author links Chaucer's writings with the medieval optical tradition in its various forms scholastic texts encyclopedias exempla vernacular poetry both in general cultural terms and through the discussion of specific examples He shows how the science of optics or perspectiva provides an account of spatial perception including visual error and demonstrates how these aspects of optical theory impact on Chaucer's poetry He provides detailed and sustained analysis of the spatial content of narratives across the range of Chaucer's works relating them to optical ideas and making use of Lefebvre's theory of the production of space The texts discussed include the Book of the Duchess House of Fame Knight's Tale Miller's Tale Reeve's Tale Merchant's Tale Squire's Tale and Troilus and Criseyde
