Science, Culture, and Modern State Formation Patrick Carroll,2006-10-02 This highly original groundbreaking study explores the profound relationship between science and government to present a new understanding of modern state formation Beginning with the experimental science of Robert Boyle in seventeenth century England Patrick Carroll develops the concept of engine science to capture the centrality of engineering practices and technologies in the emerging mechanical philosophy He traces the introduction of engine science into colonial Ireland showing how that country subsequently became a laboratory for experiments in statecraft Carroll s wide ranging study spanning institutions political philosophy and policy implementation demonstrates that a number of new technological developments from cartography statistics and natural history to geology public health and sanitary engineering reveal how modern science came to engineer land people and the built environment into a material political state in an unprecedented way creating the modern state
