Ecological Interactions Lab

Background information
Ecological interactions form the backbone of all relationships that govern the functioning and dynamics of ecosystems. Within these ecosystems, organisms constantly interact with one another and their environment, shaping the delicate balance of nature. These interactions encompass a wide array of relationships, ranging from mutualistic alliances to predatory pursuits and competitive struggles. Understanding and studying these ecological interactions is crucial for unraveling the complexity of ecosystems and predicting their responses to environmental changes.

In this lab, we delve into the fascinating world of ecological interactions, exploring the various ways in which organisms interact and influence one another's survival, reproduction, and distribution. By investigating these interactions, we aim to gain insight into the fundamental principles that govern the organization and functioning of ecosystems.

By observing variations in these ecological interactions, we hope to gain a deeper appreciation for the intricate interconnections that sustain ecosystems and grasp the fascinating process of evolution. This lab will provide us with valuable insights into the ecological dynamics that underpin the resilience and stability of natural systems, aiding in our efforts to conserve and manage these precious ecosystems in our ever-changing world.

Materials
Each group of 3 will need:

- 1 sheet of paper
- 3 empty cups (one per student)
- 3 pom-pom popcorn (one per student)
- 3 marbles of each color (one per student)

Directions
Each person in your group represents a different species (Species A, Species B, and Species C). For each round, you will read instructions from your designated water card about how your species can survive the round. The water card explains how the interactions on your card will affect your chance of "surviving" your round. The first round of water is the center of your group. You will use a spoon to collect the water you need to survive during the allotted time and place them in your cup. Once you have your water, you will use it to help you survive the next round.

Round 1 - 3 will read and discuss round 1 and how it affects the water. At the end of the round, count how many water you get into your cup. You will record your group's numbers in the data table, and then identify what ecological relationship your group had. Then, put all of your water back into the community bowl. You will get new instructions each round and repeat the next round.

Round 1			
	Species A	Species B	Species C
Number of water in the cup			
What ecological relationship did you observe?			

Round 2 - 3 will read and discuss round 2 and how it affects the water. At the end of the round, count how many water you get into your cup. You will record your group's numbers in the data table, and then identify what ecological relationship your group had. Then, put all of your water back into the community bowl. You will get new instructions each round and repeat the next round.
