Science In Flux Boston Studies In The Philosophy Of Science:

Boston Studies in the Philosophy of Science Cohen, Robert Sonn   Cohen, Marx W. Wartofsky, 1975 **An Architectonic for Science** W. Balzer, C.U. Moulines, J.D. Sneed, 2012-12-06 This book has grown out of eight years of close collaboration among its authors From the very beginning we decided that its content should come out as the result of a truly common effort That is we did not distribute parts of the text planned to each one of us On the contrary we made a point that each single paragraph be the product of a common reflection Genuine team work is not as usual in philosophy as it is in other academic disciplines We think however that this is more due to the idiosyncrasy of philosophers than to the nature of their subject Close collaboration with positive results is as rewarding as anything can be but it may also prove to be quite difficult to implement In our case part of the difficulties came from purely geographic separation This caused unsuspected delays in coordinating the work But more than this as time passed the accumulation of particular results and ideas outran our ability to fit them into an organic unity Different styles of exposition different ways of formalization different levels of complexity were simultaneously present in a voluminous manuscript that had become completely unmanageable In particular a portion of the text had been conceived in the language of category theory and employed ideas of a rather abstract nature while another part was expounded in the more conventional set theoretic style stressing intuitivity and concreteness **A Collection of Polish Works on Philosophical Problems of Time and Spacetime** Helena Eilstein, 2013-04-17 This is a collection of some works of Polish philosophers and physicists on philosophical problems of time and spacetime Without restricting the thematic scope of the papers the issue concerning objectivity of time flow runs as a uniting thread through most of them Partly it is discussed directly and partly the authors focus on themes which are of paramount importance for one's attitude to that question In the first six papers the authors deal with their topics against the background of contemporary physics its theories its difficulties and discussed conjectures For the paper of S. Snihur that background is provided by everyday world outlook and the author discusses the problem of existence and character of the future in the light of basic principles of classical logic The paper of A. P  tawski about the views of the outstanding Polish philosopher Roman Ingarden enriches the thematic scope of the collection introducing into it some questions from philosophical anthropology and ethics JERZY GOLOSZ MOTION SPACE TIME Abstract The paper discusses the properties of spacetime we study by analyzing the phenomenon of motion Of special interest are the spacetime symmetries the spacetime structures and the ontological status of spacetime These problems are considered on the grounds of the classical theories of motion contained in Newtonian physics special and general theory of relativity The controversy between an absolute and a relational conception of motion and its ontological implications are also analyzed **Dynamic Epistemic Logic** Hans van Ditmarsch, Wiebe van der Hoek, Barteld Kooi, 2007-05-06 Dynamic Epistemic Logic is the logic of knowledge change This book provides various logics to support such formal specifications including proof systems Concrete examples and epistemic puzzles enliven the exposition The book also

offers exercises with answers It is suitable for graduate courses in logic Many examples exercises and thorough completeness proofs and expressivity results are included A companion web page offers slides for lecturers and exams for further practice

Collected Papers of Stig Kanger with Essays on his Life and Work Volume II Ghita

Holmström-Hintikka, Sten Lindström, R. Sliwinski, 2012-12-06 Stig Kanger 1924-1988 made important contributions to logic and formal philosophy Kanger's dissertation *Provability in Logic* 1957 contained significant results in proof theory as well as the first fully worked out model theoretic interpretation of quantified modal logic It is generally accepted nowadays that Kanger was one of the originators of possible worlds semantics for modal logic Kanger's most original achievements were in the areas of general proof theory the semantics of modal and deontic logic and the logical analysis of the concept of rights He also contributed to action theory preference logic and the theory of measurement This is the first of two volumes dedicated to the work of Stig Kanger The present volume is a complete collection of Kanger's philosophical papers The second volume contains critical essays on Kanger's work as well as biographical essays on Kanger written by colleagues and friends

Refined Verisimilitude S.D. Zwart, 2013-11-11 The subject of the present inquiry is the approach to the truth research which started with the publication of Sir Karl Popper's *Conjectures and Refutations* In the decade before this publication Popper fiercely attacked the ideas of Rudolf Carnap about confirmation and induction and ten years later in the famous tenth chapter of *Conjectures* he introduced his own ideas about scientific progress and verisimilitude of the quotation on page 6 Abhorring inductivism for its appreciation of logical weakness rather than strength Popper tried to show that fallibilism could serve the purpose of approach to the truth To substantiate this idea he formalized the common sense intuition about preferences that is B is to be preferred to A if B has more advantages and fewer drawbacks than A In 1974 however David Miller and Pavel Tichy proved that Popper's formal explication could not be used to compare false theories Subsequently many researchers proposed alternatives or tried to improve Popper's original definition

The Limits of Logical

Empiricism Arthur Pap, 2006-03-02 This volume collects some of the most significant papers of Arthur Pap Pap's work played an important role in the development of the analytic tradition This goes beyond the merely historical fact of Pap's influential views of dispositional and modal concepts Pap's writings in philosophy of science modality and philosophy of mathematics provide insightful alternative perspectives on philosophical problems of current interest

Reuniting the

Antipodes - Constructive and Nonstandard Views of the Continuum Peter Schuster, Ulrich Berger, Horst

Osswald, 2013-03-14 At first glance Robinson's original form of nonstandard analysis appears nonconstructive in essence because it makes a rather unrestricted use of classical logic and set theory and in particular of the axiom of choice Recent developments however have given rise to the hope that the distance between constructive and nonstandard mathematics is actually much smaller than it appears So the time was ripe for the first meeting dedicated simultaneously to both ways of doing mathematics and to the current and future reunion of these seeming opposites Consisting of peer reviewed research

and survey articles written on the occasion of such an event this volume offers views of the continuum from various standpoints Including historical and philosophical issues the topics of the contributions range from the foundations the practice and the applications of constructive and nonstandard mathematics to the interplay of these areas and the development of a unified theory

The Brain from 25,000 Feet Mark A. Changizi, 2013-06-29 In *The Brain from 25 000 Feet* Mark A Changizi defends a non reductionist philosophy and applies it to a variety of problems in the brain sciences Some of the key questions answered are as follows Why do we see visual illusions and why are illusions inevitable for any finite speed vision machine Why aren t brains universal learning machines and what does the riddle of induction and its solution have to do with human learning and innateness The author tackles such questions as why the brain is folded and why animals have as many limbs as they do explaining how these relate to principles of network optimality He describes how most natural language words are vague and then goes on to explain the connection to the ultimate computational limits on machines There is also a fascinating discussion of how animals accommodate greater behavioral complexity This book is a must read for researchers interested in taking a high level non mechanistic approach to answering age old fundamental questions in the brain sciences

Logic, Meaning and Computation C. Anthony Anderson, Michael Zelěny, 2012-12-06 This volume began as a remembrance of Alonzo Church while he was still with us and is now finally complete It contains papers by many well known scholars most of whom have been directly influenced by Church s own work Often the emphasis is on foundational issues in logic mathematics computation and philosophy as was the case with Church s contributions now universally recognized as having been of profound fundamental significance in those areas The volume will be of interest to logicians computer scientists philosophers and linguists The contributions concern classical first order logic higher order logic non classical theories of implication set theories with universal sets the logical and semantical paradoxes the lambda calculus especially as it is used in computation philosophical issues about meaning and ontology in the abstract sciences and in natural language and much else The material will be accessible to specialists in these areas and to advanced graduate students in the respective fields
