and on the related concepts of thermodynamic and communication theoretic entropy The foundation of the approach is the theme of continuity between evolution learning and human consciousness The author defines life as a process of energy exchange between organism and environment and evolution as a feedback process maintaining equilibrium between environment and reproductive group He demonstrates that closely related feedback processes on the levels of the behaving organism and of the organism's nervous system constitute the phenomena of learning and consciousness respectively He analyses language as an expedient for extending human information processing and control capacities beyond those provided by one's own nervous system and shows reason to be a mode of processing information in the form of concepts removed from immediate stimulus control The last chapter touches on colour vision pleasure and pain intentionality self awareness and other subjective phenomena Of special interest to the communication theorist and philosopher this study is also of interest to psychologists and anyone interested in the connection between the physical and life sciences **Tales of the Mighty Dead**
