Science The Instrument Maker:

The Optician and Scientific Instrument Maker, 1928 Early American Scientific Instruments and Their Makers

Silvio A. Bedini, 2019-11-22 In Early American Scientific Instruments and Their Makers Silvio A. Bedini meticulously explores the intricate relationship between science and craftsmanship during America's formative years. This compelling study delves into the evolution of scientific tools and devices, highlighting the innovations and practical applications that characterized early American scientific advancement. With a literary style that expertly blends historical narrative with detailed descriptions, Bedini situates this work within the broader context of American intellectual history, presenting a vivid portrait of the makers who contributed to the country's scientific landscape. Silvio A. Bedini, a noted historian and curator, draws from a wealth of knowledge accumulated during his tenure at the Smithsonian Institution, where he dedicated himself to the preservation and study of scientific instruments. His passion for this niche area of history can be attributed to his belief in the significance of these tools as artifacts of human ingenuity and inquiry. In addition, Bedini's extensive research into various craftsmen and their contributions offers readers a nuanced understanding of the cultural and technological milieu of the time. Early American Scientific Instruments and Their Makers is an essential read for scholars, collectors, and enthusiasts alike, offering profound insights into the ingenuity of early American science. Whether you are a historian seeking a deeper understanding of America's technological past or simply curious about the evolution of scientific tools, Bedini's work is both informative and engaging, inviting you to appreciate the legacy of these remarkable creators. **Early American Scientific**

Instruments and Their Makers Silvio A. Bedini, 1964 Within recent years, fairly exhaustive studies have been made on many aspects of American Science and Technology. To make a comprehensive study of American scientific instruments and instrument makers in the American Colonies is no simple matter, partly because of an indifference to the subject in the past and partly because of the great volume of sources that must be sifted to accomplish it. **Making Scientific Instruments**

in the Industrial Revolution A.D. Morrison-Low, 2017-03-02 At the start of the Industrial Revolution, it appeared that most scientific instruments were made and sold in London, but by the time of the Great Exhibition in 1851, a number of provincial firms had the self-confidence to exhibit their products in London to an international audience. How had this change come about, and why? This book looks at the four main and two lesser English centres known for instrument production outside the capital: Birmingham, Liverpool, Manchester, and Sheffield, along with the older population centres in Bristol and York. Making wide use of new sources, Dr Morrison-Low, curator of history of science at the National Museums of Scotland, charts the growth of these centres and provides a characterisation of their products. New information is provided on aspects of the trade, especially marketing techniques, sources of materials, tools, and customer relationships. From contemporary evidence, she argues that the principal output of the provincial trade, with some notable exceptions, must have been into the London marketplace anonymously and at the cheaper end of the market. She also discusses the structure and organization of the

provincial trade and looks at the impact of new technology imported from other closely allied trades By virtue of its approach and subject matter the book considers aspects of economic and business history gender and the family the history of science and technology material culture and patterns of migration It contains a myriad of stories of families and firms of entrepreneurs and customers and of organizations and arms of government In bringing together this wide range of interests Dr Morrison Low enables us to appreciate how central the making selling and distribution of scientific instruments was for the Industrial Revolution
