Robbins, 2012-12-06 Herbert Robbins is widely recognized as one of the most creative and original mathematical statisticians of our time The purpose of this book is to reprint on the occasion of his seventieth birthday some of his most outstanding research In making selections for reprinting we have tried to keep in mind three potential audiences 1 the historian who would like to know Robbins seminal role in stimulating a substantial proportion of current research in mathematical statistics 2 the novice who would like a readable conceptually oriented introduction to these subjects and 3 the expert who would like

to have useful reference material in a single collection In many cases the needs of the first two groups can be met simultaneously A distinguishing feature of Robbins research is its daring originality which literally creates new specialties for subsequent generations of statisticians to explore Often these seminal papers are also models of exposition serving to introduce the reader in the simplest possible context to ideas that are important for contemporary research in the field An example is the paper of Robbins and Monro which initiated the subject of stochastic approximation We have also attempted to provide some useful guidance to the literature in various subjects by supplying additional references particularly to books and survey articles with some remarks about important developments in these areas

Selected Papers Jacob Wolfowitz,1980-04-08 From the Introduction This volume of selected papers of Jacob Wolfowitz is published to honor the 70th birthday of this leader of research in statistical inference and information theory We have made an attempt to organize the material into sections based on subject matter Since Wolfowitz's many interests have persisted over time the sections do not represent chronological divisions We have tried to choose the papers we regarded as most important among Wolfowitz's work in terms of their further influence or sometimes a paper that contains what we found a striking idea of him A further consideration was the lucidity of his

explanations that we mentioned in describing his teaching some of his papers contain intuition of heuristics that no statistician should miss

Modern Statistics for the Social and Behavioral Sciences Rand Wilcox, 2017-08-15

Requiring no prior training Modern Statistics for the Social and Behavioral Sciences provides a two semester graduate level introduction to basic statistical techniques that takes into account recent advances and insights that are typically ignored in an introductory course Hundreds of journal articles make it clear that basic techniques routinely taught and used can perform poorly when dealing with skewed distributions outliers heteroscedasticity unequal variances and curvature Methods for dealing with these concerns have been derived and can provide a deeper more accurate and more nuanced understanding of data A conceptual basis is provided for understanding when and why standard methods can have poor power and yield misleading measures of effect size Modern techniques for dealing with known concerns are described and illustrated Features Presents an in depth description of both classic and modern methods Explains and illustrates why recent advances can provide more power and a deeper understanding of data Provides numerous illustrations using the software R Includes an R package with over 1300 functions Includes a solution manual giving detailed answers to all of the exercises This second edition describes many recent advances relevant to basic techniques For example a vast array of new and improved methods is now available for dealing with regression including substantially improved ANCOVA techniques The coverage of multiple comparison procedures has been expanded and new ANOVA techniques are described Rand Wilcox is a professor of psychology at the University of Southern California He is the author of 13 other statistics books and the creator of the R package WRS He currently serves as an associate editor for five statistics journals He is a fellow of the Association for Psychological Science and an elected member of the International Statistical Institute
