ABSTRACT

Highly Principled Data Science insists on methodologies that are: (1) scientifically justified; (2) statistically principled; and (3) computationally efficient. An astrostatistics collaboration, together with some reminiscences, illustrates the increased roles statisticians can and should play to ensure this trio, and to advance the science of data along the way.

On March 26, 2015, I received the following email from an organizer of the 10th International Astronomical Consortium for High-Energy Calibration (IACHEC) meeting, which contains the following question:

“Systematic errors in comparing effective areas: Speaking hypothetically, if we label the instruments by numbers $i = 1, \dots, N$ and each has an attribute A that is used to measure the same $j = 1, \dots, M$ astrophysical sources, with intrinsic attribute F_j where $C_{ij} = A_i F_j$ are the instrumental measurements, then the question is: Is there a way to decide how (or whether) to change A_i when the values C_{ij}/A_i do not agree with F_j to within their statistical uncertainties s_i . In other words, each instrument provides an estimator \hat{F}_j of F_j with statistical uncertainty s_j but $|\hat{F}_j - F_j|/s_j$ is often large, not distributed as a Gaussian with unit variance ... How to estimate the systematic error on the A_i ?”

^a This article is prepared for the special issue on “The Role of Statistics in the Era of Big Data” organized by Statistics and Probability Letters. I thank the editor Laura M. Sangalli for inviting me, my Astrostatistics collaborators for making my adventure possible, Joe Blitzstein, Yang Chen, Radu Craioa, Francesca Dominici, Vinay Kashyap, Todd Kuffner, Bharmar Mukherjee, Aneta Siemiginowska, Lei Sun and a reviewer for comments and encouragements, Steve Finch for proofreading, and the US National Science Foundation (DMS-1513492) for partial financial support.

¹ California Harvard Astro-Statistics Collaboration, established in 1997 by statistician David van Dyk and astrophysicists Alanna Connors (Wellesley College), Vinay Kashyap and Aneta Siemiginowska (Harvard-Smithsonian Center for Astrophysics). I helped to lead the statistical team on the Harvard side after David moved to the University of California at Irvine in 2003, and subsequently to Imperial College of London in 2011, which brought CHASC to the international arena. Alanna was a driving force of CHASC's education mission and outreach effort, helping statisticians understand science and scientists understand statistics. She devoted herself to such causes to the very end of her life. She wrote on January 28, 2013, “My cancer is not responding to any treatment, so I am going into Hospice (at home) today. I am very tired, so I may not be able to participate much. I'll try sleeping in tomorrow. With many thanks for everything”. She passed away on February 2, 2013, after more than a decade fighting with breast cancer.

Anderson, 1957 *Selected papers in statistics and probability edited for the Institute of Mathematical Statistics* Abraham Wald, **Runs and Patterns in Probability: Selected Papers** Anant P. Godbole, Stavros G. Papastavridis, 1994-04-30 The Probability Theory of Patterns and Runs has had a long and distinguished history starting with the work of de Moivre in the 18th century and that of von Mises in the early 1920 s and continuing with the renewal theoretic results in Feller s classic text *An Introduction to Probability Theory and its Applications* Volume 1 It is worthwhile to note in particular that de Moivre in the third edition of *The Doctrine of Chances* 1756 reprinted by Chelsea in 1967 pp 254 259 provides the generating function for the waiting time for the appearance of k consecutive successes During the 1940 s statisticians such as Mood Wolfowitz David and Mosteller studied the distribution theory both exact and asymptotic of run related statistics thereby laying the foundation for several exact run tests In the last two decades or so the theory has seen an impressive re emergence primarily due to important developments in Molecular Biology but also due to related research thrusts in Reliability Theory Distribution Theory Combinatorics and Statistics *Selected Papers On Statistics and Probability* Abraham Wald, 1955 **Selected Papers on Probability and Statistics**, 1979 **Selected Papers in Statistics and Probability** Abraham Wald, 1957 Selected Papers on Analysis, Probability, and Statistics Katsumi Nomizu, 1994 **Selected Papers of Hirotugu Akaike** Emanuel Parzen, Kunio Tanabe, Genshiro Kitagawa, 2012-12-06 The pioneering research of Hirotugu Akaike has an international reputation for profoundly affecting how data and time series are analyzed and modelled and is highly regarded by the statistical and technological communities of Japan and the world His 1974 paper *A new look at the statistical model identification* IEEE Trans Automatic Control AC 19 716 723 is one of the most frequently cited papers in the area of engineering technology and applied sciences according to a 1981 Citation Classic of the Institute of Scientific Information It introduced the broad scientific community to model identification using the methods of Akaike s criterion AIC The AIC method is cited and applied in almost every area of physical and social science The best way to learn about the seminal ideas of pioneering researchers is to read their original papers This book reprints 29 papers of Akaike s more than 140 papers This book of papers by Akaike is a tribute to his outstanding career and a service to provide students and researchers with access to Akaike s innovative and influential ideas and applications To provide a commentary on the career of Akaike the motivations of his ideas and his many remarkable honors and prizes this book reprints *A Conversation with Hirotugu Akaike* by David F Findley and Emanuel Parzen published in 1995 in the journal *Statistical Science* This survey of Akaike s career provides each of us with a role model for how to have an impact on society by stimulating applied researchers to implement new statistical methods **Selected Papers** Herbert Robbins, 2012-12-06 Herbert Robbins is widely recognized as one of the most creative and original mathematical statisticians of our time The

purpose of this book is to reprint on the occasion of his seventieth birthday some of his most outstanding research. In making selections for reprinting we have tried to keep in mind three potential audiences: 1 the historian who would like to know Robbins' seminal role in stimulating a substantial proportion of current research in mathematical statistics; 2 the novice who would like a readable, conceptually oriented introduction to these subjects; and 3 the expert who would like to have useful reference material in a single collection. In many cases the needs of the first two groups can be met simultaneously. A distinguishing feature of Robbins' research is its daring originality which literally creates new specialties for subsequent generations of statisticians to explore. Often these seminal papers are also models of exposition serving to introduce the reader in the simplest possible context to ideas that are important for contemporary research in the field. An example is the paper of Robbins and Monro which initiated the subject of stochastic approximation. We have also attempted to provide some useful guidance to the literature in various subjects by supplying additional references, particularly to books and survey articles, with some remarks about important developments in these areas.

This book is a collection of selected refereed papers presented at the International Conference on Statistics, Combinatorics and Related Areas and the Eighth International Conference of the Forum for Interdisciplinary Mathematics. It includes contributions from eminent statisticians such as Joe Gani, Clive Granger, Chris Heyde, R. Nishii, C. R. Rao, P. K. Sen, and Sue Wilson. By exploring and investigating deeper, these papers enlarge the reservoir in the represented areas of research such as bioinformatics, estimating functions, financial statistics, generalized linear models, goodness of fit, image analysis, industrial data analysis, multivariate statistics, neural networks, quasi-likelihood, sample surveys, statistical inference, stochastic models, and time series.

Selected Papers Jacob Wolfowitz, 1980-04-08 From the Introduction This volume of selected papers of Jacob Wolfowitz is published to honor the 70th birthday of this leader of research in statistical inference and information theory We have made an attempt to organize the material into sections based on subject matter Since Wolfowitz's many interests have persisted over time the sections do not represent chronological divisions We have tried to choose the papers we regarded as most important among Wolfowitz's work in terms of their further influence or sometimes a paper that contains what we found a striking idea of him A further consideration was the lucidity of his explanations that we mentioned in describing his teaching some of his papers contain intuition of heuristics that no statistician should miss
