Selected Papers On Algebra And Topology:

Selected Papers on Algebra and Topology by Garrett Birkhoff J.S. Oliveira, G.-C. Rota, 2014-01-14 Selected Papers on Algebra and Topology by Garrett Birkhoff J.S. Oliveira, G.-C. Rota, 1987-01-01 The present volume of reprints are what I consider to be my most interesting and influential papers on algebra and topology To tie them together and to place them in context I have supplemented them by a series of brief essays sketching their historical background as I see it In addition to these I have listed some subsequent papers by others which have further developed some of my key ideas The papers on universal algebra lattice theory and general topology collected in the present volume concern ideas which have become familiar to all working mathematicians It may be helpful to make them readily accessible in one volume I have tried in the introduction to each part to state the most significant features of each paper reprinted there and to indicate later developments The background that shaped and stimulated my early work on universal algebra lattice theory and topology may be of some interest As a Harvard undergraduate in 1928-32 I was encouraged to do independent reading and to write an original thesis My tutorial reading included de la Vallee Poussin's beautiful *Cours d'Analyse Infinitesimale* Hausdorff's *Grundzüge der Mengenlehre* and Frechet's *Espaces Abstraits* In addition I discovered Caratheodory's 1912 paper *Vber das lineare Mass von Punktmengen* and Hausdorff's 1919 paper on *Dimension und Ausseres Mass* and derived much inspiration from them A fragment of my thesis analyzing axiom systems for separable metrizable spaces was later published 2 This background led to the work summarized in Part IV *Selected Papers on Differential Equations and Analysis*, 2005 Contains translations of papers that originally appeared in the Japanese journal *Sugaku* This book covers a variety of topics including differential equations with free boundary singular integral operators and operator algebras It is suitable for graduate students and research mathematicians interested in analysis and differential equations **Selected Papers on Analysis and Related Topics**, 2008 This volume contains translations of papers that originally appeared in the Japanese journal *Sugaku* The papers range over a variety of topics including operator algebras analysis and statistics **Selected Papers** Solomon Lefschetz, 1971 **Selected Papers on Harmonic Analysis, Groups, and Invariants** Katsumi Nomizu, 1997 The five papers originally appeared in Japanese in the journal *Sugaku* and would ordinarily appear in the Society's translation of that journal but are published separately here to expedite their dissemination They explore such aspects as representation theory differential geometry invariant theory and complex analysis No index Member prices are 47 for institutions and 35 for individual Annotation copyrighted by Book News Inc Portland OR *Combinatorial Optimization* Alexander Schrijver, 2003-02-12 This book offers an in depth overview of polyhedral methods and efficient algorithms in combinatorial optimization These methods form a broad coherent and powerful kernel in combinatorial optimization with strong links to discrete mathematics mathematical programming and computer science In eight parts various areas are treated each starting with an elementary introduction to the area with short elegant proofs of the principal results and each evolving to

the more advanced methods and results with full proofs of some of the deepest theorems in the area Over 4000 references to further research are given and historical surveys on the basic subjects are presented Topics in Statistical and Theoretical Physics R. L. Dobrushin,1996 Proceedings of the St. Petersburg Mathematical Society, Volume VIII N.N.

Uraltseva,2002-04-02 The articles in this collection present new results in partial differential equations numerical analysis probability theory and geometry The results ideas and methods given in the book will be of interest to a broad range of specialists

Semimodular Lattices Manfred Stern,1999-05-13 In Semimodular Lattices Manfred Stern uses successive generalizations of distributive and modular lattices to outline the development of semimodular lattices from Boolean algebras He focuses on the important theory of semimodularity its many ramifications and its applications in discrete mathematics combinatorics and algebra The book surveys and analyzes Garrett Birkhoff s concept of semimodularity and the various related concepts in lattice theory and it presents theoretical results as well as applications in discrete mathematics group theory and universal algebra Researchers in lattice theory discrete mathematics combinatorics and algebra will find this book valuable Mathematics in St. Petersburg A. A. Bolibrukh,1996 **Selected Research Papers** L.S.

Pontryagin,2019-11-11 Among the finest achievements in modern mathematics are two of L S Pontryagin s most notable contributions Pontryagin duality and his general theory of characters of a locally compact commutative group This book the first in a four volume set contains the most important papers of this eminent mathematician those which have influenced many generations of mathematicians worldwide They chronicle the development of his work in many areas from his early efforts in homology groups duality theorems and dimension theory to his later achievements in homotopic topology and optimal control theory On 3 September 1983 Lev Semenovich Pontryagin was seventy five To mark this important event in the life of this outstanding contemporary mathematician we are beginning the publication of his scientific works in four volumes according to a decision taken by the Mathematics Division of the USSR Academy of Sciences The first volume contains the most important mathematical papers of L S Pontryagin and also includes a bibliography of his basic scientific works the second is his well known monograph Topological Groups the third comprises two monographs Foundations of Algebraic Topology and Smooth Manifolds and Their Applications in Homotopy Theory and the fourth is a revised edition of The Mathematical Theory of Optimal Processes by L S Pontryagin V G Boltyanskii R V Gamkrelidze and E F Mishchenko

Fuzzy Sets, Fuzzy Logic, And Fuzzy Systems: Selected Papers By Lotfi A Zadeh George J Klir,Bo Yuan,1996-05-30 This book consists of selected papers written by the founder of fuzzy set theory Lotfi A Zadeh Since Zadeh is not only the founder of this field but has also been the principal contributor to its development over the last 30 years the papers contain virtually all the major ideas in fuzzy set theory fuzzy logic and fuzzy systems in their historical context Many of the ideas presented in the papers are still open to further development The book is thus an important resource for anyone interested in the areas of fuzzy set theory fuzzy logic and fuzzy systems as well as their applications Moreover the book is also intended to play a useful

role in higher education as a rich source of supplementary reading in relevant courses and seminars The book contains a bibliography of all papers published by Zadeh in the period 1949-1995 It also contains an introduction that traces the development of Zadeh's ideas pertaining to fuzzy sets, fuzzy logic and fuzzy systems via his papers The ideas range from his 1965 seminal idea of the concept of a fuzzy set to ideas reflecting his current interest in computing with words a computing in which linguistic expressions are used in place of numbers Places in the papers where each idea is presented can easily be found by the reader via the Subject Index Some questions of differential geometry in the large E. V. Shikin, 1996-07-16

This collection contains articles that present recent results by geometers in Russia and the Ukraine Papers in the collection deal with various questions related to the structure, symmetries and embeddings of submanifolds in Euclidean and pseudo-Euclidean spaces This collection offers a review of the challenges facing specialists in geometry in the large and features current research in the field Proceedings of the St. Petersburg Mathematical Society Volume III Ol'ga Aleksandrovna

Ladyzhenskaiĭ, 1995 Books in this series highlight some of the most interesting works presented at symposia sponsored by the St. Petersburg Mathematical Society Aimed at researchers in number theory, field theory and algebraic geometry the present volume deals primarily with aspects of the theory of higher local fields and other types of complete discretely valued fields Most of the papers require background in local class field theory and algebraic K theory however two of them, Unit Fractions and Collections of Multiple Sums, would be accessible to undergraduates Topics in Singularity Theory

Aleksei Nikolaevich Khovanskii, 1997 *Selected papers. 2 (1986)* Shizuo Kakutani, Robert R. Kallman, 1986 Works of Shizuo Kakutani Japanese American mathematician best known for his eponymous fixed point theorem **History of Banach**

Spaces and Linear Operators Albrecht Pietsch, 2007-12-31 Written by a distinguished specialist in functional analysis this book presents a comprehensive treatment of the history of Banach spaces and abstract bounded linear operators Banach space theory is presented as a part of a broad mathematics context using tools from such areas as set theory, topology, algebra, combinatorics, probability theory, logic etc Equal emphasis is given to both spaces and operators The book may serve as a reference for researchers and as an introduction for graduate students who want to learn Banach space theory with some historical flavor Sinai's Moscow Seminar on Dynamical Systems L. A. Bunimovich, B. M. Gurevich, Ya. B. Pesin, 1996

Selected Papers on Automath R.P. Nederpelt, J.H. Geuvers, R.C. de Vrijer, 1994-10-20 The present volume contains a considered choice of the existing literature on Automath Many of the papers included in the book have been published in journals or conference proceedings but a number have only circulated as research reports or have remained unpublished The aim of the editors is to present a representative selection of existing articles and reports and of material contained in dissertations giving a compact and more or less complete overview of the work that has been done in the Automath research field from the beginning to the present day Six different areas have been distinguished which correspond to Parts A to F of the book These areas range from general ideas and motivation to detailed syntactical investigations
