Selected Works of Konstantin E. Tsiolkovsky Konstantin E. Tsiolkovsky, 2004-11 Konstantin Tsiolkovsky is recognized throughout the world as the father of astronautics He was largely self educated and in later life worked under extremely difficult conditions in an atmosphere that combined indifference with hostility and ridicule But his extreme dedication to the idea of space flight never left him Tsiolkovsky was 60 years old when the October Revolution of 1917 took place yet most of his scientific papers were written after the revolution At the time of his death in 1935 they exceeded 500 The tremendous advances of soviet science and technology culminated in 1957 in the world s first spacecraft Sputnik I thus bringing to fruition the prophetic ideas of the great Russian pioneer of astronautics This volume contains a selection of some of Tsiolkovsky s more important scientific works *Dreams of the Earth and Sky* Konstantin Tsiolkovsky, 2017-02-13 Konstantin Tsiolkovsky was a Russian and Soviet rocket scientist and pioneer of the astronautic theory His works later inspired leading Soviet rocket engineers and contributed to the success of the Soviet space program Tsiolkovsky spent most of his life in a log house on the outskirts of Kaluga about 200 km southwest of Moscow A recluse by nature he appeared strange and bizarre to his fellow townsfolk This volume contains both his scientific and philosophical works *Konstantin Tsiolkovsky* A. Kosmodemyansky, 2000-12 This book is a story of the life and work of Konstantin Tsiolkovsky a celebrated scientist and inventor the father of modern rocketry He devoted most of his energies to the solution of three scientific and engineering problems the all metal dirigible the aeroplane and the rocket The most vital and progressive of his discoveries are those dealing with the theory of rocket propulsion His designs of reaction devices his methods of studying the dynamics of rocket flight and research into the possibilities of interplanetary travel have become widely known and have won world recognition Tsiolkovsky s first original calculations of rocket flight were made at the end of the 19th century and published in 1903 His conclusions were based on elaborate calculation and are strictly scientific I could never proceed without calculation It was calculation that directed by thought and my imagination Tsiolkovsky wrote in one of his articles We are witness of Tsiolkovsky s scientific ideas and dreams being embodied in long range rockets guided missiles and jet aircraft to which every passing day brings new improvements while scientific and technical magazines in many countries are seriously discussing the computations for and design of rockets which are to be satellites of the Earth On the threshold of the 20th century Konstantin Tsiolovsky and Ivan Meshchersky laid the foundation of the new sciences rocket dynamics and the mechanics of bodies with variable mass In his chief works published in 1897 and 1904 Meshchersky gave the main equations for the dynamics of a point of variable mass Tsiolkovsky elaborated the dynamics of the rectilinear motion of the long range rocket with reaction motor operation on liquid fuel Tsiolkovsky s works on rocket dynamics and the theory of interplanetary flight were the first in world scientific literature They preserve their scientific and practical significance to this day **The**

human experience lies an obsession with the nature of death Religion for most of history has provided an explanation for human life and a vision of what comes after it But in the late nineteenth and early twentieth centuries such beliefs came under relentless pressure as new ideas from psychiatry to evolution to communism seemed to suggest that our fate was now in our own hands humans could cease to be animals defeat death and become immortal In *The Immortalization Commission* the acclaimed political philosopher and critic John Gray takes a brilliant and frightening look at humankind's dangerous striving toward a scientific version of immortality Probing the parallel faiths of Bolshevik God builders who sought to reshape the planet and psychical researchers who believed they had evidence of a nonreligious form of life after death Gray raises fascinating questions about how such beliefs threaten the very nature of what it means to be human He looks to philosophers journalists politicians charlatans and mass murderers who all felt driven by a specifically scientific and modern worldview and whose revolt against death resulted in a series of experiments that ravaged whole countries An urgent examination of Darwin's post religious legacy *The Immortalization Commission* is an important work from one of Britain's leading public intellectuals *The Wall Street Journal*

Deep Space Craft Dave Doody, 2010-04-03 *Deep Space Craft* opens the door to interplanetary flight It looks at this world from the vantage point of real operations on a specific mission and follows a natural trail from the day to day working of this particular spacecraft through the functioning of all spacecraft to the collaboration of the various disciplines to produce the results for which a spacecraft is designed These results are of course mostly of a scientific nature although a small number of interplanetary missions are also flown primarily to test and prove new engineering techniques The author shows how in order to make sense of all the scientific data coming back to Earth the need for experiments and instrumentation arises and follows the design and construction of the instruments through to their placement and testing on a spacecraft prior to launch Examples are given of the interaction between an instrument's science team and the mission's flight team to plan and specify observations gather and analyze data in flight and finally present the results and discoveries to the scientific community This highly focused insider's guide to interplanetary space exploration uses many examples of previous and current endeavors It will enable the reader to research almost any topic related to spacecraft and to seek the latest scientific findings the newest emerging technologies or the current status of a favorite flight In order to provide easy paths from the general to the specific the text constantly refers to the Appendices Within the main text the intent is general familiarization and categorization of spacecraft and instruments at a high level to provide a mental framework to place in context and understand any spacecraft and any instrument encountered in the reader's experience Appendix A gives illustrated descriptions of many interplanetary spacecraft some earth orbiters and ground facilities to reinforce the classification framework Appendix B contains illustrated detailed descriptions of a dozen scientific instruments including some ground breaking engineering appliances that have either already been in operation or are poised for flight Each instrument's range of sensitivity in wavelengths of light etc and its physical principles of operation is described
