The Astronomer and the Witch Ulinka Rublack, 2015-10-23 Johannes Kepler 1571-1630 was one of the most admired astronomers who ever lived and a key figure in the scientific revolution A defender of Copernicus's sun-centred universe he famously discovered that planets move in ellipses and defined the three laws of planetary motion Perhaps less well known is that in 1615 when Kepler was at the height of his career his widowed mother Katharina was accused of witchcraft The proceedings led to a criminal trial that lasted six years with Kepler conducting his mother's defence In *The Astronomer and the Witch* Ulinka Rublack pieces together the tale of this extraordinary episode in Kepler's life one which takes us to the heart of his changing world First and foremost an intense family drama the story brings to life the world of a small Lutheran community in the centre of Europe at a time of deep religious and political turmoil a century after the Reformation and on the threshold of the Thirty Years War Kepler's defence of his mother also offers us a fascinating glimpse into the great astronomer's world view on the cusp between Reformation and scientific revolution While advancing rational explanations for the phenomena which his mother's accusers attributed to witchcraft Kepler nevertheless did not call into question the existence of magic and witches On the contrary he clearly believed in them And as the story unfolds it appears that there were moments when even Katharina's children wondered whether their mother really did have nothing to hide
