Self-organized Complexity in the Physical, Biological, and Social Sciences Donald Lawson Turcotte, John Rundle, Hans Frauenfelder, 2002      *Self-organized Complexity in the Physical, Biological, and Social Sciences* Donald Lawson Turcotte, John B. Rundle, 2002      Sackler NAS Colloquium Self-Organized Complexity in the Physical, Biological, and Social Sciences, 2002      Self-Organized Criticality in Astrophysics Markus Aschwanden, 2011-01-11 Markus Aschwanden introduces the concept of self organized criticality SOC and shows that due to its universality and ubiquity it is a law of nature for which he derives the theoretical framework and specific physical models in this book He begins by providing an overview of the many diverse phenomena in nature which may be attributed to SOC behaviour The author then introduces the classic lattice based SOC models that may be explored using numerical computer simulations These simulations require an in depth knowledge of a wide range of mathematical techniques which the author introduces and describes in subsequent chapters These include the statistics of random processes time series analysis time scale distributions and waiting time distributions Such mathematical techniques are needed to model and understand the power law like occurrence frequency distributions of SOC phenomena Finally the author discusses fractal geometry and scaling laws before looking at a range of physical SOC models which may be applicable in various aspects of astrophysics Problems solutions and a glossary will enhance the pedagogical usefulness of the book SOC has been receiving growing attention in the astrophysical and solar physics community This book will be welcomed by students and researchers studying complex critical phenomena

Sackler Colloquium on Self-Organized Complexity in the Physical, Biological, and Social Sciences, 2002      Intelligent Complex Adaptive Systems Yang, Ang, Shan, Yin, 2008-03-31 This book explores the foundation history and theory of intelligent adaptive systems providing a fundamental resource on topics such as the emergence of intelligent adaptive systems in social sciences biologically inspired artificial social systems sensory information processing as well as the conceptual and methodological issues and approaches to intelligent adaptive systems Provided by publisher      **Hierarchy in Natural and Social Sciences** Denise Pumain, 2006-02-09 Hierarchy is a form of organisation of complex systems that rely on or produce a strong differentiation in capacity power and size between the parts of the system It is frequently observed within the natural living world as well as in social institutions According to the authors hierarchy results from random processes follows an intentional design or is the result of the organisation which ensures an optimal circulation of energy for information This book reviews ancient and modern representations and explanations of hierarchies and compares their relevance in a variety of fields such as language societies cities and living species It throws light on concepts and models such as scaling laws fractals and self organisation that are fundamental in the dynamics and morphology of complex systems At a time when networks are celebrated for their efficiency flexibility and better social acceptance much can be learned about the persistent universality and adaptability of hierarchies and from the analogies and differences between

biological and social organisation and processes This book addresses a wide audience of biologists and social scientists as well as managers and executives in a variety of institutions *Complex Systems Studies* Rzevski, G., Brebbia, C.

A., 2018-02-06 Containing selected papers on the fundamentals and applications of Complexity Science this multi disciplinary book presents new approaches for resolving complex issues that cannot be resolved using conventional mathematical or software models Complex Systems problems can occur in a variety of areas such as physical sciences and engineering the economy the environment humanities and social and political sciences Complexity Science problems the science of open systems consisting of large numbers of diverse components engaged in rich interaction can occur in a variety of areas such as physical sciences and engineering the economy the environment humanities and social and political sciences The global behaviour of these systems emerges from the interaction of constituent components and is unpredictable but not random The key attribute of Complex Systems is the ability to self organise and adapt to unpredictable changes in their environment

**Mystery Of Time, The: Asymmetry Of Time And Irreversibility In The Natural Processes** Alexander Leonidovich Kuzemsky, 2022-10-14 The book focuses on the study of the temporal behavior of complex many particle systems The phenomenon of time and its role in the temporal evolution of complex systems is a remaining mystery The book presents the necessity of the interdisciplinary point of view regarding on the phenomenon of time The aim of the present study is to summarize and formulate in a concise but clear form the trends and approaches to the concept of time from a broad interdisciplinary perspective exposing tersely the complementary approaches and theories of time in the context of thermodynamics statistical physics cosmology theory of information biology and biophysics including the problem of time and aging Various approaches to the problem show that time is an extraordinarily interdisciplinary and multifaceted underlying notion which plays an extremely important role in various natural complex processes **ECMLG 2017 13th European**

**Conference on Management, Leadership and Governance** Martin Rich, 2017-12-11 These Proceedings represent the work of contributors to the 13th European Conference on Management Leadership and Governance ECMLG 2017 hosted this year by the Cass Business School City University of London on 11-12 December 2017 The Conference Chair is Dr Martin Rich The conference will be opened with a keynote address by Dr Helen Rothberg from Marist College Poughkeepsie USA with a speech entitled Everything I Know about Leadership I Learned as a Bartender On the second day the keynote will be delivered by Dr Amanda Goodall from City University of London on the topic of Why we need core business experts as leaders ECMLG is a well established platform for individuals to present their research findings display their work in progress and discuss conceptual advances in many different branches of Management Leadership and Governance At the same time it provides an important opportunity for members of the community to come together with peers share knowledge and exchange ideas With an initial submission of 160 abstracts after the double blind peer review process there are 61 academic papers 8 PhD Papers and 2 Work in Progress papers in these Conference Proceedings These papers reflect the truly global

nature of research in the area with contributions from Australia Austria Belgium Brazil Canada Czech Republic Finland Germany Hungary Iran Ireland Israel Kazakhstan Kenya Lithuania Malaysia     The Nonlinear World Yoshitsugu Oono,2012-10-30 The most important characteristic of the world filled with nonlinearity is the existence of scale interference disparate space time scales interfere with each other Thus the effects of unknowable scales invade the world that we can observe directly This leads to various peculiar phenomena such as chaos critical phenomena and complex biological phenomena among others Conceptual analysis and phenomenology are the keys to describe and understand phenomena that are subject to scale interference because precise description of unfamiliar phenomena requires precise concepts and their phenomenological description The book starts with an illustration of conceptual analysis in terms of chaos and randomness and goes on to explain renormalization group philosophy as an approach to phenomenology Then abduction is outlined as a way to express what we have understood about the world The book concludes with discussions on how we can approach genuinely complex phenomena including biological phenomena The main target of this volume is young people who have just started to appreciate the world seriously The author also wishes the book to be helpful to those who have been observing the world but who wish to appreciate it afresh from a different angle     *Evolution and Standardization of Mobile Communications Technology* Seo, DongBack,2013-05-31 Information and communication technologies ICT are a vital component of successful business models As new technologies emerge organizations must adapt quickly and strategically to these changes or risk falling behind Evolution and Standardization of Mobile Communications Technology examines methods of developing and regulating compatibility standards in the ICT industry assisting organizations in their application of the latest communications technologies in their business practices Organizations maintain competitive advantage by implementing cutting edge technologies as soon as they appear This book serves as a compendium of the most recent research and development in this arena providing readers with the insight necessary to take full advantage of a wide range of ICT solutions This book is part of the Advances in IT Standards and Standardization Research series collection

**Mathematical Modeling of Social Relationships** Urszula Strawinska-Zanko,Larry S. Liebovitch,2018-06-07 This edited volume presents examples of social science research projects that employ new methods of quantitative analysis and mathematical modeling of social processes This book presents the fascinating areas of empirical and theoretical investigations that use formal mathematics in a way that is accessible for individuals lacking extensive expertise but still desiring to expand their scope of research methodology and add to their data analysis toolbox Mathematical Modeling of Social Relationships professes how mathematical modeling can help us understand the fundamental compelling and yet sometimes complicated concepts that arise in the social sciences This volume will appeal to upper level students and researchers in a broad area of fields within the social sciences as well as the disciplines of social psychology complex systems and applied mathematics     **Natural Time Analysis: The New View of Time** Panayiotis Varotsos,Nicholas V.

Sarlis, Efthimios S. Skordas, 2011-08-14 This book deals with the theory and the applications of a new time domain termed natural time domain that has been forwarded by the authors almost a decade ago P A Varotsos N V Sarlis and E S Skordas Practica of Athens Academy 76 294 321 2001 Physical Review E 66 011902 2002 In particular it has been found that novel dynamical features hidden behind time series in complex systems can emerge upon analyzing them in this new time domain which conforms to the desire to reduce uncertainty and extract signal information as much as possible The analysis in natural time enables the study of the dynamical evolution of a complex system and identifies when the system enters a critical stage Hence natural time plays a key role in predicting impending catastrophic events in general Relevant examples of data analysis in this new time domain have been published during the last decade in a large variety of fields e g Earth Sciences Biology and Physics The book explains in detail a series of such examples including the identification of the sudden cardiac death risk in Cardiology the recognition of electric signals that precede earthquakes the determination of the time of an impending major mainshock in Seismology and the analysis of the avalanches of the penetration of magnetic flux into thin films of type II superconductors in Condensed Matter Physics In general this book is concerned with the time series analysis of signals emitted from complex systems by means of the new time domain and provides advanced students and research workers in diverse fields with a sound grounding in the fundamentals of current research work on detecting long range correlations in complex time series Furthermore the modern techniques of Statistical Physics in time series analysis for example Hurst analysis the detrended fluctuation analysis the wavelet transform etc are presented along with their advantages when natural time domain is employed

**Attracted to Conflict: Dynamic Foundations of Destructive Social Relations** Robin R.

Vallacher, Peter T. Coleman, Andrzej Nowak, Lan Bui-Wrzosinska, Larry Liebovitch, Katharina Kugler, Andrea Bartoli, 2014-07-08

Conflict is inherent in virtually every aspect of human relations from sport to parliamentary democracy from fashion in the arts to paradigmatic challenges in the sciences and from economic activity to intimate relationships Yet it can become among the most serious social problems humans face when it loses its constructive features and becomes protracted over time with no obvious means of resolution This book addresses the subject of intractable social conflict from a new vantage point Here these types of conflict represent self organizing phenomena emerging quite naturally from the ongoing dynamics in human interaction at any scale from the interpersonal to the international Using the universal language and computational framework of nonlinear dynamical systems theory in combination with recent insights from social psychology intractable conflict is understood as a system locked in special attractor states that constrain the thoughts and actions of the parties to the conflict The emergence and maintenance of attractors for conflict can be described by means of formal models that incorporate the results of computer simulations experiments field research and archival analyses Multi disciplinary research reflecting these approaches provides encouraging support for the dynamical systems perspective Importantly this text presents new views on conflict resolution In contrast to traditional approaches that tend to focus on basic short lived cause effect relations the dynamical perspective emphasizes the temporal patterns and potential for emergence in destructive relations Attractor deconstruction entails restoring complexity to a conflict scenario by isolating elements or changing the feedback loops among them The creation of a latent attractor trades on the tendency toward multi stability in dynamical systems and entails the consolidation of incongruent positive elements into a coherent structure In the bifurcation scenario factors are identified that can change the number and types of attractors in a conflict scenario The implementation of these strategies may hold the key to unlocking intractable conflict creating the potential for constructive social relations

**Nonlinear Dynamics in Geosciences** Anastasios A. Tsonis,James B. Elsner,2007-10-23 Nonlinear Dynamics in Geosciences is comprised of the proceedings of 20 Years of Nonlinear Dynamics in Geosciences held June 11 16 2006 in Rhodes Greece as part of the Aegean Conferences The volume brings together the most up to date research from the atmospheric sciences hydrology geology and other areas of geosciences and discusses the advances made and the future directions of nonlinear dynamics Topics covered include predictability ensemble prediction nonlinear prediction nonlinear time series analysis low dimensional chaos nonlinear modeling fractals and multifractals bifurcation and other aspects of nonlinear science

**Environmental Risk Assessment and Management from a Landscape Perspective** Lawrence A. Kapustka,Wayne G. Landis,2010-07-15 An important guide to assessing and managing the environment from a landscape perspective Ecological relationships are nested within the landscape Identifying the relevant spatial and temporal scales is critical for an effective understanding of ecological functions that human societies depend upon Moreover human encroachment into natural areas or changes in climate can alter spatial relationships which in turn can negatively affect vital plant and wildlife patterns and weaken economic structures needed to sustain human societies This book is the first to

combine multiple disciplines into one cohesive strategy to study these crucial connections and looks toward building a social paradigm that embraces the dynamics of ecological systems This book Integrates landscape ecology environmental risk assessment valuation of ecological goods and services and environmental management decision processes into one single source Includes chapters on quantitative measures Bayesian modeling economic analysis and sustainable landscapes Covers marine forest agricultural and pharmaceutical risk assessment Has a chapter on predicting climate change risk to ecosystems Has a companion ftp site with color graphics animations and risk assessment tools With material that is accessible across all knowledge levels Environmental Risk Assessment and Management from a Landscape Perspective moves beyond looking solely at chemical contaminants to diagnose environmental threats and aims to accomplish practical risk assessment in a manner that supports long term sustainable management      *Kondratieff Waves, Warfare and World Security* Tessa Leno C. Devezas, 2006 Considerable progress has been made in understanding the underlying mechanisms driving the long wave behaviour of the world socioeconomic development A controversial mechanism discussed is the close relationship between K waves and the outbreak of major wars      Prestate Societies of the North Central European Plains Ludomir R Lozny, 2013-04-16 This volume offers a new perspective on social dynamics and culture change in the North Central European Plains NCEP from 600 to 900 CE It discusses long term causal processes leading to the formation of state at the fringes of the Merovingian and Frankish Kingdoms the Carolingian and the Holy Roman Empire the Scandinavian Kingdoms the Czech Kingdom and the Kingdom of Rus The central problem addressed is how to account for and explain the transition from noncomplex to supra tribal polities between 600 and 900 CE The examined evidence shows that a very basic community level management of common pool resources seems a successful strategy to manage short term risk and may lead to sustainable higher level political organization In conclusion it presents a model of social dynamics of the NCEP 600 900 CE that suggests that the state formation process was an outcome of spontaneous processes and deterministic factors occurring within a period of approximately 400 years of which the last two hundred years 800 900 CE were the most critical In a broader context the point discussed is that decisions with short term goals have long term consequences
