Dance, Embodied Agency and Neuroplasticity in Aging Glenna B. Batson,Bettina E. Bläsing,Aline Nogueira Haas,Christina E. Hugenschmidt ,Joseph F. X. DeSouza,2024-11-18 Dance is a multi sensory and multi modal form of movement expression one that stimulates creative potential for innovative action and intersubjective communication Over the last two decades results from systematic reviews have shown a spectrum of dance styles to be powerful non pharmacological agents in advancing intergenerational health across quality of life domains This Research Topic invites further investigation into the specificity of how the dancing body can access untapped cognitive resources that promote brain health in the elderly While early findings from dance protocols have been shown to impact

positively on structural and functional neuroplasticity the link between embodied agency and brain health remains under researched and under theorized Researchers are called to design methodologies that test the eco validity of dance explicitly examining the interactive effects of sentient expressive movement with cognitive reserve One challenge among many lies in explicating and differentiating the elements of the dancing body itself particularly when outcomes correlate with other forms of movement rich exercise for the elderly

Flawed System/Flawed Self Ofer Sharone, 2013-10-16 Today 4 7 million Americans have been unemployed for more than six months In France more than ten percent of the working population is without work In Israel it's above seven percent And in Greece and Spain that number approaches thirty percent Across the developed world the experience of unemployment has become frighteningly common and so are the seemingly endless tactics that job seekers employ in their quest for new work Flawed System Flawed Self delves beneath these staggering numbers to explore the world of job searching and unemployment across class and nation Through in depth interviews and observations at job search support organizations Ofer Sharone reveals how different labor market institutions give rise to job search games like Israel's résumé based spec games which are focused on presenting one's skills to fit the job and the chemistry games more common in the United States in which job seekers concentrate on presenting the person behind the résumé By closely examining the specific day to day activities and strategies of searching for

a job Sharone develops a theory of the mechanisms that connect objective social structures and subjective experiences in this challenging environment and shows how these different structures can lead to very different experiences of unemployment
