of AIED and ITS Research It is my pleasure to write the foreword for Advances in Intelligent Tutoring Systems This collection with contributions from leading researchers in the field of artificial intelligence in education AIED constitutes an overview of the many challenging research problems that must be solved in order to build a truly intelligent tutoring system ITS The book not only describes some of the approaches and techniques that have been explored to meet these challenges but also some of the systems that have actually been built and deployed in this effort As discussed in the Introduction Chapter 1 the terms AIED and ITS are often used interchangeably and there is a large overlap in the researchers devoted to exploring this common field In this foreword I will use the term AIED to refer to the search area and the term ITS to refer to the particular kind of system that AIED researchers build It has often been said that AIED is AI complete in that to produce a tutoring system as sophisticated and effective as a human tutor requires solving the entire gamut of artificial intelligence research AI problems

At Play in the Fields of Consciousness Jefferson A. Singer, Peter Salovey, 1999-03 This collection of articles pays homage to the creativity and scientific rigor Jerome Singer has brought to the study of consciousness and play It will interest personality social clinical and developmental psychologists alike

**The Mental Representation of Trait and Autobiographical Knowledge About the Self** Thomas K. Srull, Robert S. Wyer, Jr., 2015-12-03 If there is one topic on which we all are experts it is ourselves Psychologists depend upon this expertise as asking people questions about themselves is an important means by which they gather the data that provide much of the evidence for psychological theory Personal recollections play an important role in clinical theorizing people's thoughts feelings and beliefs provide the principal data for attitudinal research and judgments of one's traits and descriptions of one's goals and motivations are essential for the study of personality Yet despite their long dependence on self-report data psychologists know very little about this basic resource and the processes that govern it In spite of the importance of the self as a concept in psychology virtually no empirically tested representational models of self knowledge can be found Recently however several theoretical accounts of the representation of self knowledge have been proposed These models have been concerned primarily with the factors underlying a particular type of self knowledge our trait conceptions of ourselves The models all share the starting assumption that the source of our knowledge of the traits that describe us is memory for our past behavior The lead article in this volume reviews the available models of the processes underlying trait self-descriptiveness judgments Although these models appear quite different in their basic representational assumptions exemplar and abstraction models sometimes are difficult to distinguish experimentally Presenting a series of studies using several new techniques which the authors believe are effective for assessing whether people recruit specific exemplars or abstract trait summaries when making trait judgments about themselves they conclude that specific behavioral exemplars play a far smaller role in the representation of trait knowledge than previously has been assumed Finally the limitations of social cognition paradigms as methods for studying the representation of long-term social knowledge are discussed and the implications of the research for both existing and

future social psychological research are explored      **Self-esteem** Virgil Zeigler-Hill, 2013 In this edited collection a distinguished set of contributors present a broad overview of psychological research on self esteem Each chapter is written by leading experts in the field and surveys current research on a particular issue concerning self esteem Together the chapters provide a comprehensive overview of one of the most popular topics in psychology Each chapter presents an in depth review of particular issues concerning self esteem such as the connection that self esteem has with the self concept and psychological adjustment A number of further topics are covered in the book including How individuals pursue self esteem The developmental changes in feelings of self worth over the life span The existence of multiple forms of high self esteem The role that self esteem plays as an interpersonal signal The protective properties associated with the possession of high self esteem This collection of state of the art reviews of key areas of the psychological literature on self esteem will be of great interest to researchers and academics and also to graduate and advanced undergraduate students of social psychology

**The Self and Memory** Denise R. Beike, James M. Lampinen, Douglas A. Behrend, 2004-11 How we think of ourselves depends largely on what we remember from our lives and what we remember is biased in many ways by how we think of ourselves The complex interplay of the self and memory is the topic of this volume      **Memory for Everyday and Emotional Events** Nancy L. Stein, Charles J. Brainerd, Barbara Tversky, Peter A. Ornstein, 2018-10-24 The nature of memory for everyday events and the contexts that can affect it are controversial topics being investigated by researchers in cognitive social clinical and developmental lifespan psychology today This book brings many of these researchers together in an attempt to unpack the contextual and processing variables that play a part in everyday memory particularly for emotion laden events They discuss the mental structures and processes that operate in the formation of memory representations and their later retrieval and interpretation      **The Remembering Self** Ulric Neisser, Robyn Fivush, 1994-10-28 This book brings a surprisingly wide range of intellectual disciplines to bear on the self narrative and the self The same ecological cognitive approach that successfully organized Ulric Neisser's earlier volume on The Perceived Self now relates ideas from the experimental developmental and clinical study of memory to insights from post modernism and literature Although autobiographical remembering is an essential way of giving meaning to our lives the memories we construct are never fully consistent and often simply wrong In the first chapter Neisser considers the so called false memory syndrome in this context other contributors discuss the effects of amnesia the development of remembering in childhood the social construction of memory and its alleged self servingness and the contrast between literary and psychological models of the self Jerome Bruner Peggy Miller Alan Baddeley Kenneth Gergen and Daniel Albright are among the contributors to this unusual synthesis

**Meanings of Life** Roy F. Baumeister, 1991-01-01 Who among us has not at some point asked what is the meaning of life In this extraordinary book an eminent social scientist looks at the big picture and explores what empirical studies from diverse fields tell us about the human condition MEANINGS OF LIFE draws together evidence from psychology history anthropology

and sociology integrating copious research findings into a clear and conclusive discussion of how people attempt to make sense of their lives In a lively and accessible style emphasizing facts over theories Baumeister explores why people desire meaning in their lives how these meanings function what forms they take and what happens when life loses meaning It is the most comprehensive examination of the topic to date

The Psychology of Justice and Legitimacy D. Ramona Bobocel, Aaron C. Kay, Mark P. Zanna, James M. Olson, 2011-02-25 In response to the international turmoil violence and increasing ideological polarization social psychological interest in the topics of legitimacy and social justice has blossomed considerably Social psychologists have explored the psychological underpinnings of people's reactions to injustice and illegitimacy including the behavioral and psychological consequences of the motivation to view individual outcomes and governmental systems as just and legitimate Although injustice and illegitimacy are clearly related at conceptual and theoretical levels these two rich literatures are rarely integrated Social justice researchers have focused on how people make sense of particular instances of injustice whereas legitimacy researchers have tended to focus primarily on people's reactions to unfair systems of intergroup relations This 11th volume of the Ontario Symposium series brings together the work of leading researchers in fields of social justice and legitimacy to facilitate the cross pollination and integration of these fields The contributions address broad theoretical issues and cutting edge empirical advances while illustrating the diversity and richness of research in the two fields By uniting these two domains this volume will stimulate new directions in theory and research that seek to explain how and why people make sense of injustice at all levels of analysis

**Remembered Self** Jefferson A. Singer, Peter Salovey, 2010-06-15 A theory for

psychologists on the role of memory in personality psychology In *The Remembered Self* Jefferson A Singer and Peter Salovey persuasively argue that memories are an important window into one's life story revealing characteristic moods motives and thinking patterns Through experimental evidence clinical case material and examples from literature the authors offer a fresh perspective on the role of memory in personality and clinical psychology Unlike the conventional psychoanalytic approach to memory which concentrates on what is forgotten Singer and Salovey treat memory in a new and different way with an emphasis on what is remembered Theirs is a bold new theory of memory and self that is both comprehensive and accessible

**Computers As Cognitive Tools** Susanne P. Lajoie, Sharon J. Derry, 2013-05-13 Highlighting and illustrating several important and interesting theoretical trends that have emerged in the continuing development of instructional technology this book's organizational framework is based on the notion of two opposing camps One evolves out of the intelligent tutoring movement which employs artificial intelligence technologies in the service of student modeling and precision diagnosis and the other emerges from a constructivist developmental perspective that promotes exploration and social interaction but tends to reject the methods and goals of the student modelers While the notion of opposing camps tends to create an artificial rift between groups of researchers it represents a conceptual distinction that is inherently more interesting and informative than the relatively meaningless divide often drawn between intelligent and unintelligent instructional systems An evident trend is that researchers in both camps view their computer learning environments as cognitive tools that can enhance learning performance and understanding Cognitive tools are objects provided by the instructional environment that allow students to incorporate new auxiliary methods or symbols into their social problem solving which otherwise would be unavailable A final section of the book represents researchers who are assimilating and accommodating the wisdom and creativity of their neighbors from both camps perhaps forming the look of technology for the future When the idea of model tracing in a computer based environment is combined with appreciation for creative mind extension cognitive tools and for how a community of learners can facilitate learning a camp is created where AI technologists and social constructivist learning theorists can feel equally at home

**Talk about Writing** Jo Mackiewicz, Isabelle Thompson, 2018-04-24 Talk about Writing *The Tutoring Strategies of Experienced Writing Center Tutors* offers a book length empirical study of the discourse between experienced tutors and student writers in satisfactory conferences It analyzes writing center talk focusing on tutors verbal strategies at the macro and microlevels The study details tutors use of three categories of tutoring strategies instruction cognitive scaffolding and motivational scaffolding with each chapter of the analysis ending in practical advice about tutor training The second edition adds to the discussion of research provided in the first edition maintaining the two previous goals to provide a theory based coding scheme for analyzing tutoring strategies according to their potential for instructing and scaffolding student writers learning and to demonstrate that analysis on 10 satisfactory conferences conducted by experienced writing center tutors New to this edition

the authors expand the previous discussion of the coding scheme with additional details about its development Along with the expanded Chapter 3 about research methods this edition features new examples from the corpus of conferences and updates the literature review
