Self Organizing Universe:

The Self-organizing Universe Erich Jantsch, 1980 The book with its emphasis on the interaction of microstructures with the entire biosphere ecosystems etc and on how micro and macrocosmos mutually create the conditions for their further evolution provides a comprehensive framework for a deeper understanding of human creativity in a time of transition At Home in the Universe Stuart Kauffman, 1995 This exciting exploration into the nature of life brilliantly weaves together the excitement of intellectual discovery and a fertile mix of insights to give the general reader a fascinating look at the new science of complexity and at the forces for order that lie at the edge of chaos An important new argument Carl Sagan The Washington Post 59 illustrations **The Self-organizing Polity** Laurent Dobuzinkis, 2019-07-11 Is the study of living systems a useful metaphor for political science In this book Dr Dobuzinkis argues for further exploration of biopolitical models to explain the complexity of political theory and social change His discussion emphasizes the new cybernetics which considers not only self regulating but also self organizing or self producing systems Self organizing systems operate in an autonomous sphere comparable to the autonomy of the political community and the political actors who compose this community The autonomy of these systems is maintained through dynamic equilibration processes that entail not only the preservation of a given structure but also at crucial times the creative rearrangement of the existing structure and its transformation into a new pattern of relations From this perspective a political crisis is both a threat to the political system and the occasion of its renewal stability may also mean decay Emphasizing the links that have developed historically between the natural and social sciences this book is a reflection on the merits of and difficulties involved in representing the evolutionary process at the political level as the problematic reproduction of national communities and states **Into the Cool** Eric D. Schneider, Dorion Sagan, 2005-06 The authors look to the laws of thermodynamics for answers to the questions of evolution ecology economics and even life's origin Science and Religion John F. Haught, 1995 Has science made religion intellectually implausible Does it rule out the existence of a personal God In an age of science can we really believe that the universe has a purpose And finally doesn't religion hold much of the blame for the present ecological crisis These questions form the nucleus of today's debate between science and religion This book is a guide for that debate identifying the questions isolating the issues and pointing to ways the questions can be resolved There are four possible ways says John F Haught that we can view the relationship between religion and science First they can stand in complete opposition the conflict position Or we can believe they are so different that conflict is impossible the contrast position A third approach holds that while science and religion are distinct each has important implications for the other A fourth way views them as different but mutually supportive BOOK JACKET Title Summary field provided by Blackwell North America Inc All Rights Reserved **From Systems to Actor-Networks** Andréa Belliger, David Krieger, 2024-02-09 This book documents a paradigm shift not only in the sciences but also in society Everywhere in society systems are becoming networks This implies

not only a new understanding of social science but also of society and ourselves The book describes the systems model based on Luhmann s theory of social systems and compares this to Latour s actor network theory It argues that present day society cannot be successfully modeled as a system and illustrates the transformation to a global network society by citing many examples from business education and healthcare The authors argue that actor network theory provides a more comprehensive account of these changes than systems theory Based on actor network theory they propose a theory of the digital transformation that is ushering in the global network society Although people in all areas talk about systems adaptive behavior evolution complexity and networks few know where these concepts come from and what they mean in the theories they belong to This book is for all who are concerned with clarifying the often taken for granted assumptions and concepts that are implicitly or explicitly derived from systems theory and network theory It offers an introduction to the work of Luhmann and Latour and a critical and constructive development of these important theories for the 21st century

Complexity and Organization Robert Macintosh, Donald Maclean, Ralph Stacey, Douglas Griffin, 2013-10-16 In the past decade complexity based thinking has exerted an increasing yet somewhat controversial authority over management theory and practice This has in some part been due to the influence of a number of high profile articles and the not inconsiderable hype which has accompanied them Another feature of the subject's development has been the diversity of the origins of the thinking and the claims which have been made for it in terms of managerial and organizational implications Complexity and Organization is the first text to bring this thinking together presenting some of the most influential writing in the field showing how the subject has developed and how it continues to influence managerial thinking Seminal contributions to the field have been brought together in a single accessible volume allowing readers to access what might otherwise appear a very diverse body of literature Moreover the editors who represent some of the leading thinkers and writers in this field have combined these readings with a unique commentary indicating not only the importance of the papers but teasing out the subtle but significant differences and similarities between them These commentaries take the form of a discussion between the editors debating the contribution that each paper has made to the field and the influence it has had on management thinking

The Universal Kabbalah Leonora Leet, 2004-09-29 This landmark work by an innovative modern Kabbalist develops a scientific model for kabbalistic cosmology and soul psychology Derived from the kabbalistic diagram of the Tree of Life and the author's own Sabbath Star diagram this universal model encodes the laws of all cosmic manifestation giving a mathematical basis to many aspects of this mystical tradition and providing a new synthesis of science and spirituality that may well write a new chapter to the Kabbalah

Theoretical Knowledge Viacheslav Semenovitch Stepin, 2005-07-12 He shows direct and inverse links between foundations of science and new theories and empirical facts evolved from those how among many potentially possible histories of science a culture selects just those directions which become a real history of science The author analyses mechanisms of the generation of scientific theories and shows that those are changed in the process of historical development of science He displays three historical types of scientific rationality classical non classical and post non classical which appears in modern science and shows features of their coexistence and interplay It is shown that along with the emerging of post non classical rationality science increases the sphere of its worldview applications Science begins to correlate not only with the basic values of technogenic civilization but also with some values and patterns of traditional cultures

Natural and Cosmic Theodicy Jongseock James Shin, 2022-10-21 This book presents a

third way to envision the Creatorship of the Triune God who is both compassionate and eschatologically redemptive in providential presence rather than biasedly gravitating toward the openness of a self limiting God or God s all determining sovereignty Not only is God in with and under creation God s kenotic presence invites creatures to participate in the self giving love of God through both general and special divine action in a top down through bottom up mode Creatio continua is God s own journey of fulfilling the eschatological promise for creation This redemptive presence of God in creation is a Trinitarian co protesting against the power of death sin and evil considering the cosmic dimensions of the eschatological hope promised in the resurrection of Jesus The new creation is the ultimate fulfillment of creaturely freedom and contingency divinely granted in creatio ex nihilo In arguing this Shin engages in a comparative and critical study of natural and cosmic theodicy advanced by Catherine Keller Arthur Peacocke Wolfhart Pannenberg and Robert Russell
