**The Semantics of Chinese Classifiers and Linguistic Relativity** Song Jiang, 2017-06-26 The Semantics of Chinese Classifiers and Linguistic Relativity focuses on the semantic structure of Chinese classifiers under the cognitive linguistics framework and the implications thereof on linguistic relativity and language acquisition It examines the semantic correlation between a given classifier and its associated nouns Nouns in Chinese which are assigned specific classifiers according to their selected characteristics reflect the process of human categorization The concrete categories formed by the relationship between nouns and classifiers may serve to explain the conceptual structure of the Chinese language and certain underlying aspects of culture and human cognition Song Jiang is Assistant Professor of Chinese for the Department of East Asian Languages and Literatures at University of Hawaii at Manoa

*Cognitive Modeling and Verbal Semantics* Andrea C. Schalley, 2011-05-03 This book presents a unique approach to the semantics of verbs It develops and specifies a compositional representation framework for verbal semantics that is based on the Unified Modeling Language UML the graphical lingua franca for the design and modeling of object oriented systems in computer science The new framework combines formal precision with conceptual flexibility and allows the representation of very complicated details of verbal meaning using a mixture of graphical elements as well as linearized constructs Thereby it offers a solution for different semantic problems such as context dependency and polysemy The latter for instance is demonstrated in one of the two well elaborated applications of the framework within this book the investigation of the polysemy of German setzen Besides the formal specification of the framework the book comprises a cognitive interpretation of important modeling elements

discusses general issues connected with the framework such as dynamic and static aspects of verbal meanings questions of granularity and general constraints applying to verbal semantics Moreover first steps towards a compositional semantics are undertaken and a new verb classification based on this graphical approach is proposed Since the framework is graphical in nature the book contains many annotated figures and the framework's modeling elements are illustrated by example diagrams Not only scholars working in the field of linguistics in particular in semantics will find this book illuminating because of its new graphical approach but also researchers of cognitive science computational linguistics and computer science in general will surely appreciate it
