Semantical Investigation In Heytings Intuitionistic Logic:

Semantical Investigations in Heyting's Intuitionistic Logic Dov M. Gabbay, 2013-11-11 From the point of view of non classical logics Heyting's implication is the smallest implication for which the deduction theorem holds This book studies properties of logical systems having some of the classical connectives and implication in the neighbourhood of Heyting's implication I have not included anything on entailment although it belongs to this neighbourhood mainly because of the appearance of the Anderson Belnap book on entailment In the later chapters of this book I have included material that might be of interest to the intuitionist mathematician Originally I intended to include more material in that spirit but I decided against it There is no coherent body of material to include that builds naturally on the present book There are some serious results on topological models second order Beth and Kripke models theories of types etc but it would require further research to be able to present a general theory possibly using sheaves That would have postponed publication for too long I would like to dedicate this book to my colleagues Professors G Kreisel M O Rabin and D Scott I have benefited greatly from Professor Kreisel's criticism and suggestions Professor Rabin's fundamental results on decidability and undecidability provided the powerful tools used in obtaining the majority of the results reported in this book Professor Scott's approach to non classical logics and especially his analysis of the Scott consequence relation makes it possible to present Heyting's logic as a beautiful integral part of non classical logics

Logics in AI Jan van Eijck, 1991-02-26 The European Workshop on Logics in Artificial Intelligence was held at the Centre for Mathematics and Computer Science in Amsterdam September 10-14 1990 This volume includes the 29 papers selected and presented at the workshop together with 7 invited papers The main themes are Logic programming and automated theorem proving Computational semantics for natural language Applications of non classical logics Partial and dynamic logics

Handbook of Philosophical Logic Dov M. Gabbay, Franz Guenther, 2013-06-29 It is with great pleasure that we are presenting to the community the second edition of this extraordinary handbook It has been over 15 years since the publication of the first edition and there have been great changes in the landscape of philosophical logic since then The first edition has proved invaluable to generations of students and researchers in formal philosophy and language as well as to consumers of logic in many applied areas The main logic article in the Encyclopaedia Britannica 1999 has described the first edition as the best starting point for exploring any of the topics in logic We are confident that the second edition will prove to be just as good The first edition was the second handbook published for the logic community It followed the North Holland one volume Handbook of Mathematical Logic published in 1977 edited by the late Jon Barwise The four volume Handbook of Philosophical Logic published 1983-1989 came at a fortunate temporal junction at the evolution of logic This was the time when logic was gaining ground in computer science and artificial intelligence circles These areas were under increasing commercial pressure to provide devices which help and or replace the human in his daily activity This pressure required the use of logic in the modelling of human activity and

organisation on the one hand and to provide the theoretical basis for the computer program constructs on the other

A Logical Theory of Causality Alexander Bochman, 2021-08-17 A general formal theory of causal reasoning as a logical study of causal models reasoning and inference In this book Alexander Bochman presents a general formal theory of causal reasoning as a logical study of causal models reasoning and inference basing it on a supposition that causal reasoning is not a competitor of logical reasoning but its complement for situations lacking logically sufficient data or knowledge Bochman also explores the relationship of this theory with the popular structural equation approach to causality proposed by Judea Pearl and explores several applications ranging from artificial intelligence to legal theory including abduction counterfactuals actual and proximate causality dynamic causal models and reasoning about action and change in artificial intelligence As logical preparation before introducing causal concepts Bochman describes an alternative situation based semantics for classical logic that provides a better understanding of what can be captured by purely logical means He then presents another prerequisite outlining those parts of a general theory of nonmonotonic reasoning that are relevant to his own theory These two components provide a logical background for the main two tier formalism of the causal calculus that serves as the formal basis of his theory He presents the main causal formalism of the book as a natural generalization of classical logic that allows for causal reasoning This provides a formal background for subsequent chapters Finally Bochman presents a generalization of causal reasoning to dynamic domains

Computer Science - Theory and Applications Alexander Kulikov, Nikolay Vereshchagin, 2011-06-03 This book constitutes the proceedings of the 6th International Computer Science Symposium in Russia CSR 2011 held in St Petersburg Russia in June 2011 The 29 papers presented were carefully reviewed and selected from 76 submissions The scope of topics of the symposium was quite broad and covered basically all areas of the foundations of theoretical computer science

Reachability Problems Antonin Kucera, Igor Potapov, 2010-08-18 This book constitutes the research papers presented at the 4th International Workshop RP 2010 held in Brno Czech Republic August 28 29 2010 and was co located with Joint MFCS and CSL 2010 35th International Symposiums on Mathematical Foundations of Computer Science and 19th EACSL Annual Conferences on Computer Science Logic The revised 9 full papers and the 4 invited talks of this workshop reflect reachability problems that appear in algebraic structures computational models hybrid systems and verification Reachability is a fundamental problem in the context of many models and abstractions which are describing various computational processes Topics of interest include reachability problems in infinite state systems rewriting systems dynamical and hybrid systems reachability problems in logic and verification reachability analysis in different computational models counter timed cellular communicating automata Petri Nets computational aspects of algebraic structures semigroups groups and rings frontiers between decidable and undecidable reachability problems predictability in iterative maps and new computational paradigms

Reasoning with Actual and Potential Contradictions Dov M. Gabbay, Philippe Smets, 2013-04-17 We are happy to present the second volume of the Handbook of

Defeasible Reasoning and Uncertainty Management Systems Uncertainty pervades the real world and must therefore be addressed by every system that attempts to represent reality The representation of un certainty is a major concern of philosophers logicians artificial intelligence researchers and computer scientists psychologists statisticians economists and engineers The present Handbook volumes provide frontline coverage of this area This Handbook was produced in the style of previous handbook series like the Handbook of Philosophical Logic the Handbook of Logic in Computer Science the Handbook of Logic in Artificial Intelligence and Logic Programming and can be seen as a companion to them in covering the wide applications of logic and reasoning We hope it will answer the needs for adequate representations of uncertainty This Handbook series grew out of the ESPRIT Basic Research Project DRUMS II where the acronym is made out of the Handbook series title This project was financially supported by the European Union and regroups 20 major European research teams working in the general domain of uncer tainty As a fringe benefit of the DRUMS project the research community was able to create this Handbook series relying on the DRUMS partici pants as the core of the authors for the Handbook together with external international experts *Automated Reasoning with Analytic Tableaux and Related Methods* Roy

Dyckhoff,2006-12-30 This book constitutes the refereed proceedings of the International Conference on Automated Reasoning with Analytic Tableaux and Related Methods TABLEUX 2000 held in St Andrews Scotland UK in July 2000 The 23 revised full papers and 2 system descriptions presented were carefully reviewed and selected from 42 submissions Also included are 3 invited lectures and 6 nonclassical system comparisons All current issues surrounding the mechanization of reasoning with tableaux and similar methods are addressed ranging from theoretical foundations to implementation systems development and applications as well as covering a broad variety of logical calculi *The Logic of Time* Johan van

Benthem,2013-03-09 The subject of Time has a wide intellectual appeal across different dis ciplines This has shown in the variety of reactions received from readers of the first edition of the present Book Many have reacted to issues raised in its philosophical discussions while some have even solved a number of the open technical questions raised in the logical elaboration of the latter These results will be recorded below at a more convenient place In the seven years after the first publication there have been some noticeable newer developments in the logical study of Time and temporal expressions As far as Temporal Logic proper is concerned it seems fair to say that these amount to an increase in coverage and sophistication rather than further break through innovation In fact perhaps the most significant sources of new activity have been the applied areas of Linguistics and Computer Science including Artificial Intelligence where many intriguing new ideas have appeared presenting further challenges to temporal logic Now since this Book has a rather tight composition it would have been difficult to interpolate this new material without endangering intelligibility *Explanatory Nonmonotonic Reasoning* Alexander Bochman,2005 Many approaches in the field of nonmonotonic and commonsense reasoning are actually different representations of the same basic ideas and constructions This book gives a logical formalization of the original

explanatory approach to nonmonotonic reasoning It uses the basic formalism of biconsequence relations as well as derived systems of default autoepistemic and causal inference to cover in a single framework such diverse systems as default logic autoepistemic and modal nonmonotonic logics input output and causal logics argumentation theory and semantics of general logic programs with negation as failure This approach provides a clear separation between logical monotonic and nonmonotonic aspects of nonmonotonic reasoning The separation allows in particular to single out the logics underlying modern logic programming and restore thereby the connection between logic programming and logic **Scientific**

Progress Craig Dilworth, 2013-06-29 Featuring the Gestalt Model and the Perspectivist conception of science this book is unique in its non relativistic development of the idea that successive scientific theories are logically incommensurable This edition includes four new appendices in which the central ideas of the book are applied to subatomic physics the distinction between laws and theories the relation between absolute and relative conceptions of space and the environmental issue of sustainable development **Antiaesthetics** Paul Ziff, 2013-11-27 Although various sections of this work have been published separately in various journals and volumes their separate publication is wholly attributable to the exigencies of life in academia the work was devised as and is supposed to constitute something of an organic unity Part II of *The Cow with the Subtle Nose* was published under the title *A Creative Use of Language in New Literary History* Autumn 1972 pp 108 18 *The Cow on the Roof* appeared in *The Journal of Philosophy* LXX No 19 November 8 1973 pp 713 23 *A Fine Forehand* appeared in *The Journal of the Philosophy of Sport* Vol 1 September 1974 pp 92 109 *Quote Judgements from Our Brain* appeared in *Perspectives on the Philosophy of Wittgenstein* ed by I Block Oxford Basil Blackwell 1981 pp 201 211 *Art and Sociobiology* appeared in *Mind* 1981 Vol XC pp 505 520 *Anything Viewed* appeared in *Essays in Honour of Jaakko Hintikka* ed by Esa Saarinen Risto Hilpinen Ilkka Niiniluoto and Merrill Provence Hintikka Dordrecht Holland and Boston Massachusetts D Reidel Publishing Co 1979 pp 285 293 *How I See Philosophy* appeared in *The Owl of Minerva* ed by C J Bontempo and S Jack Odell New York McGraw Hill Book Co 1975 pp 223 5 All the remaining parts are also forthcoming in various journals and volumes I am grateful to Bradley E Wilson for the preparation of the index *Peter Geach: Philosophical Encounters* H.A. Lewis, 2013-03-09 The present volume owes its existence to a proposal of Dr Esa Saarinen Our aim was to celebrate the work of a living philosopher by presenting it both from his own point of view through the medium of a philosophical autobiography and from that of his closest philosophical colleagues and adversaries We felt that a philosophical career lived through vigorous controversy was best reflected not by adulation but in the spirit of that career by open debate Contributors were not constrained in their choice of topic but their contributions fell naturally into groups linked with some of Peter Geach's principal areas of interest and we have so grouped them in the book There is an interweaving of biographical and philosophical themes not only in Peter Geach's philosophical autobiography but also in the introductions he has contributed to each section Professor W V O Quine's contribution which consists of extracts from his correspondence with Peter Geach

has been set apart as it forms a natural bridge between Peter Geach's autobiography and the contributions that follow. Their correspondence reproduced here throws new light on many familiar themes from the writings of both philosophers among them the objects of belief and other attitudes issues in set theory the nature of causality and evolution in epistemology

Advances in Intensional Logic Maarten de Rijke, 2013-06-29 Intensional logic has emerged since the 1960s as a powerful theoretical and practical tool in such diverse disciplines as computer science artificial intelligence linguistics philosophy and even the foundations of mathematics The present volume is a collection of carefully chosen papers giving the reader a taste of the frontline state of research in intensional logics today Most papers are representative of new ideas and or new research themes The collection would benefit the researcher as well as the student This book is a most welcome addition to our series

Constructivism in Mathematics, Vol 1 A.S. Troelstra, D. van Dalen, 1988-07-01 These two volumes cover the principal approaches to

constructivism in mathematics They present a thorough up to date introduction to the metamathematics of constructive mathematics paying special attention to Intuitionism Markov s constructivism and Martin Lof s type theory with its operational semantics A detailed exposition of the basic features of constructive mathematics with illustrations from analysis algebra and topology is provided with due attention to the metamathematical aspects Volume 1 is a self contained introduction to the practice and foundations of constructivism and does not require specialized knowledge beyond basic mathematical logic Volume 2 contains mainly advanced topics of a proof theoretical and semantical nature

A Companion to Philosophical Logic Dale Jacquette, 2008-04-15 This collection of newly commissioned essays by international contributors offers a representative overview of the most important developments in contemporary philosophical logic Presents controversies in philosophical implications and applications of formal symbolic logic Surveys major trends and offers original insights

Trading Ontology for Ideology L. Decock, 2013-03-09 Willard VanOrman Quine has probably been the most influential th American philosopher of the 20 century His work spans over seven decades and covers many domains in philosophy He has made major contributions to the fields of logic and set theory philosophy of logic and mathematics philosophy of language philosophy of science epistemology and metaphysics Quine s first work in philosophy was in the field of logic His major contributions are the two set theoretic systems NF 1936 and ML 1940 1 These systems were alternatives to the type theory of Principia Mathematica or Zermelo s set theory and are still being studied by 2 mathematicians An indirect contribution to the field of logic is his strong resistance to modal logic Quine s objections to the notions of necessity and analyticity have influenced the development of modal logic Quine has had an enormous influence on philosophy of mathematics When Quine entered philosophy there was a discussion on the foundations of mathematics between the schools of intuitionism formalism and conventionalism Quine soon took issue with Carnap s conventionalism in Truth by convention 4 1936 Quine has never joined one of the other schools but has added new elements that are the basic ones of the 5 contemporary schools of nominalism platonism and structuralism Quine has long been in the shadow of Benacerraf and Putnam in this field At the moment there seems to be a renewed interest in Quine s work and most philosophers explicitly refer to Quine s work

Blameworthy Belief Nikolaj Nottelmann, 2007-07-18 Believing the wrong thing may sometimes have drastic consequences The question as to when a person is not only ill guided but genuinely at fault for holding a particular belief is an important one It touches upon the roots of our understanding of such notions as criminal negligence and moral responsibility The answer to this question may influence the extent to which we are willing to submit each other to punishments ranging from mild resentment to harsh prison terms This book presents an extensive effort to shed light on the conditions under which we may appropriately deem someone blameworthy for holding a particular belief It regiments and unifies several debates within contemporary epistemology ethics and legal scholarship Finally the book brings a new philosophical look on issues like our power to control beliefs and the extent and nature of foresight

Analytic Tableaux and Related Methods P. Miglioli, 1996-04-24 This book presents the refereed proceedings of the Fifth International Workshop on Analytic Tableaux and Related Methods TABLEUX 96 held in Terrasini near Palermo Italy in May 1996. The 18 full revised papers included together with two invited papers present state of the art results in this dynamic area of research. Besides more traditional aspects of tableaux reasoning the collection also contains several papers dealing with other approaches to automated reasoning. The spectrum of logics dealt with covers several nonclassical logics including modal intuitionistic many valued temporal and linear logic.
