Threads of Life Richard Freadman, 2001-02 Many autobiographers share profound questions about human life with their readers questions like To what extent was my life imposed on me To what extent did I bring it about through particular choices and actions through the activity of my own will Indeed the issue of the will is central to autobiographical writing and some of the greatest autobiographies give extended consideration to the will its nature its powers its limitations the forms of freedom constraint and expression it finds in various cultures its role in particular human lives In this new study unprecedented in subject and scope Richard Freadman offers the first sustained account of how changing theological philosophical and psychological accounts of the human will have been reflected in the writing of autobiography and of how autobiography in its turn has helped shape various understandings of the will Early chapters trace narrative representations of the will from antiquity the Greeks and Augustine to postmodernism Derrida and Barthes with particular emphasis on late modernity's culture of the will Later chapters then present detailed and powerfully original readings of autobiographical texts by Louis Althusser Roland Barthes B F Skinner Ernest Hemingway Simone de Beauvoir Arthur Koestler Stephen Spender and Diana Trilling Freadman's interdisciplinary approach to autobiography and the will includes a theoretical defense of the view that autobiographers are in varying degrees agents in their own texts *Threads of Life* argues that late modernity has inherited deeply conflicted attitudes to the will Freadman suggests that these attitudes now deeply embedded in contemporary cultural discourse need reexamining In this he contends reflective autobiography has an important part to play

Science at Harvard University Clark A. Elliott,Margaret W. Rossiter,1992-02 This collection of original historical essays examines aspects of the relationship between science and the nation s oldest academic institution This is history as

viewed from the varying perspectives of a group of scholars for whom science at Harvard University is a significant component of their ongoing research. Thus the essays are of specialist interest while collectively the volume is a case study of science in an institutional setting. In conducting their research the authors have used a wealth of primary sources from the Harvard Archives and other repositories. The volume opens with a thematic introduction by Margaret Rossiter reflecting the picture of Harvard science drawn in the several papers in the volume while suggesting ways in which a study of Harvard relates to and illuminates the history of science in America. The subsequent papers follow a generally chronological sequence beginning with Sara Schechner Genuth's study of attitudes toward comets in relation to early Harvard University programs and functions. Mary Ann James examines the beginnings of applied science at Harvard and Bruce Sinclair continues that theme with a comparative study of MIT and Harvard. Toby Appel's paper on zoologist Jeffries Wyman identifies the special part that personal character plays in institutional history. Curtis Hinsley concentrates on facilities and shows how the Peabody Museum gave rise to teaching in anthropology. David Livingstone's biographical treatment of Nathaniel S. Shaler reveals a number of intellectual strands running through the University in the late nineteenth century and John Parascandola's paper on L. J. Henderson likewise deals with a figure of wide influence and many interests ranging from biochemistry to sociology. The latter topic leads to Lawrence Nichols's account of the rise of sociology at Harvard. A view of the internal tensions within psychology are seen in Rodney Triplet's study of Henry A. Murray. I. Bernard Cohen examines the relations among Howard Aiken, IBM and Harvard in the development of the Mark I computer while Peggy Kidwell studies the Observatory community during World War II and its response to national defense and a developing federal support system. Finally Clark Elliott considers the history of Harvard science as a field for study through a review of published literature and archival sources and makes suggestions for further investigation.

An Introduction to Theories of Personality Robert B. Ewen, 2014-01-21 This 7th Edition helps students unravel the mysteries of human behavior through its highly readable introduction to the ideas of the most significant personality theorists. Engaging biographical sketches begin each chapter and unique capsule summaries help students review key concepts. Theories come alive through the inclusion of quotations from the theorists' writings and numerous applications such as dream interpretation, psychopathology, and psychotherapy. Significant changes in the 7th edition include an extended discussion of the practical applications of personality theory with an emphasis on guidelines that can help people increase their self-knowledge, make better decisions, and live more fulfilling lives. Fictionalized but true-to-life examples illustrating the perils of inadequate self-knowledge include college students, parents, terrorists, business executives, and politicians, while other examples show the positive outcomes that can result from a better understanding of one's unconscious. This 7th edition also includes a more extensive discussion of how a lack of self-understanding caused difficulties for such noted theorists as Freud and Erikson and a new section that explains how behavior can be strongly influenced by the

situation as well as by one's personality. Finally, a new interactive web site provides practice test questions and other topics of interest.

Imperial Beast Fables Kaori Nagai, 2020-07-28

This book coins the term imperial beast fable to explore modern forms of human-animal relationships and their origins in the British Empire. Taking as a starting point the long nineteenth-century fascination with non-European beast fables, it examines literary reworkings of these fables such as Rudyard Kipling's *Jungle Books* in relation to the global politics of race, language, and species. The imperial beast fable figures variably as a key site where the nature and origins of mankind are hotly debated, an emerging space of conservation in which humans enclose animals to manage and control them, a cage in which an animal narrator talks to change its human jailors, and a vision of animal cosmopolitanism in which a close kinship between humans and other animals is dreamt of. Written at the intersection of animal studies and postcolonial studies, this book proposes that the beast fable embodies the ideologies and values of the British Empire while also covertly critiquing them. It therefore finds in the beast fable the possibility that the multitudinous animals it gives voice to might challenge the imperial networks which threaten their existence both in the nineteenth century and today.
