

Shared vs. Individual Perceptions

- Climate is the shared perceptions regarding what is rewarded, expected, valued, and reinforced in the workplace
- Not everyone will necessarily have the same perceptions.

R. Dark, 2016-10-06 Since the end of the

Cold War analysts of international politics have given much greater attention to issues of change. It has become increasingly clear to specialists from many fields that any understanding of large scale political change must encompass far longer timescales than has been usual in the study of world politics and must incorporate multi disciplinary perspectives. This book evaluates and draws on relevant theoretical approaches from other disciplines such as sociology, economics, geography, history, anthropology and archaeology as well as evolutionary theory and the mathematical study of complexity. Using an epistemological framework, Dark sets out a theory of long term world political change, the theory of Macrodynamics. This is then applied to historical, anthropological and archaeological data to explain the changing forms of political organization from the earliest human societies to the late twentieth century. The resulting analysis is a reinterpretation of the processes of global political change in the past and present. This in turn opens new areas of enquiry in the study of international relations and has profound implications for how we understand the changing world of today.

International Conflict Resolution Using System Engineering (SWIIS) H. Chestnut, T. Vamos, Peter Kopacek, 2014-07-04 Finding an alternative to supplement military ways of resolving international conflicts has been taken up by many people skilled in various areas such as political science, economics, social studies, modelling and simulation, artificial intelligence and expert systems, military strategy and weaponry as well as private business and industry. The Workshop will therefore be of use as it looks at various control methods which would create a conciliatory social and political environment or climate for seeking and obtaining non military solutions to international conflicts and to solutions to national conflicts which may lead to international conflicts.

Phenomenology and the Norms of Perception MAXIME. DOYON, 2024-09-14 In philosophy, perception is usually evaluated considering epistemological concerns about truth and falsity. Doyon suggests instead that it is governed by different immanent perceptual norms that are not disconnected from reality; rather, they tell us how our experience of reality is shaped. This book explores these ideas and their implications.

Organizational Justice Carolina Moliner, Russell Cropanzano, Vicente Martínez-Tur, 2017-03-13 Organizational justice, the perception of workplace fairness, can bring important benefits not only to the health and well-being of individual employees but also to the productivity of organizations themselves. This timely new collection with contributions from leading researchers from around the world considers organizational justice in an era when globalization has resulted in rapid organizational change, greater job insecurity, and increasing worker stress. Both comprehensive and cutting-edge, the book initially considers what we mean by organizational justice in its relationship to self-interest, social identity, and personal moral codes. But moving beyond the perceptions of individuals, the book also reflects the increasing interest in the roles of teammates and leaders in creating organizational justice. There follow chapters on the negative results of perceived injustice, specifically around physical and mental employee health, as well as its deleterious impact on organizational productivity. Providing a definitive state-of-the-art overview of the field, the book not only clarifies the key concepts and ideas that inform organizational justice but also explores their importance for today's organizations, managers, and employees. Including a final section that both suggests new areas for research and critically reflects on the field itself, this will be essential reading for researchers and students across business and management, organizational studies, HRM, and organizational and work psychology.
