Shared Risk:

Shared Responsibility, Shared Risk Jacob Hacker, Ann O'Leary, 2012-01-19 How can the American social welfare system be repaired so that workers and families receive adequate protection and if necessary provision from the ravages of the market This book addresses this fundamental problem and analyses how the privatization of risk has increased hardships for American families and increased inequality It also proposes a series of solutions that would distribute the burdens of risks more broadly and expand the social safety net [Metro Ethernet Services for LTE Backhaul](#) Roman Krzanowski, 2013 The backhaul portion of the network is comprised of intermediate links between the core network and the small sub networks at the edge of the entire hierarchical network This is a critical area because it is the side of the network that communicates with the global Internet This practical resource serves as a comprehensive guide to designing mobile Ethernet backhauling MEBH services in metro areas using carrier Ethernet CE architecture For the first time in any book you find detailed advice on how to put together the many elements of the CE toolbox to create a coherent working design for a specific MEBH service Like solving a difficult jigsaw puzzle you learn how all the CE components and standards interact and gain knowledge of their interdependencies You also gain insight into the tradeoffs and consequences associated with selection of specific components for a particular project

Central Banks as Fiscal Players Willem Buiter, 2020-11-12 It is well known that the balance sheets of most major central banks significantly expanded in the aftermath of the financial crisis of 2007 2011 but the consequences of this expansion are not well understood This book develops a unified framework to explain how and why central bank balance sheets have expanded and what this shift means for fiscal and monetary policy Buiter addresses a number of key issues in monetary economics and public finance including how helicopter money works when modern monetary theory makes sense why the Eurosystem has a potentially fatal design flaw why the fiscal theory of the price level is a fallacy and how to escape from the zero lower bound [HCB 12 - Pension Schemes Bill](#) Great Britain: Parliament: House of Commons, 2014-06-26 The Pension Schemes Bill introduces new definitions to the legislative framework for private pensions based on the type of promise that pension schemes provide for members during accumulation The current legislation is based on a binary structure between money purchase schemes which offer no certainty over retirement benefit and nonmoney purchase schemes which have traditionally offered salary related pension benefits The non money purchase scheme category can cover a range of different pension benefit designs that offer varying degrees of certainty over benefit However the legislation is often perceived as offering two main options and much existing legislation is written on the basis of a polarity between these options The Bill will thus define three categories of pension scheme based on the different types of promise offered to members during the accumulation phase about their pension savings when they come to access them also termed decumulation This promise will either refer to all of the benefits defined benefits some of the benefits shared risk or there will be no promise defined contributions The Bill also includes measures to enable the provision of collective benefits

Collective benefits are provided on the basis of allowing the scheme's assets to be used in a way that pools risks across the membership

Associations between Reading and Mathematics: Genetic, Brain Imaging, Cognitive and Educational

Perspectives Sarit Ashkenazi,Orly Rubinsten,Bert De Smedt,2017-10-05 Converging evidence demonstrates a strong link between reading and mathematics multiple cognitive processes are shared between reading and mathematics including the representation and retrieval of symbolic information attention working memory and cognitive control Additionally multiple brain networks are involved in both math and reading and last common genetic factors might influence both reading and math Hence it comes as no surprise that there are meaningful associations between aspects of math and reading abilities Moreover comorbidity rates between math learning disabilities MD and reading disabilities RD are high up to 66% and prevalence rate of the comorbid condition is reported to be more common than the prevalence rate of isolated math learning disabilities Accordingly the goal of the research topic is to explore the underline mechanisms of this overlap between reading and math The research topic aims to include the following topics Genetics it has been found that both RD and MD are based on genetic factors and run in families Moreover math problem solving shares significant genetic overlap with general cognitive ability and reading decoding whereas math fluency shares significant genetic overlap with reading fluency and general cognitive ability Hence this topic will explore the shared and unique genetic risk factors to RD and MD In addition to shared and unique genetic influence on reading and math Neural perspective converging evidence from both structural and multiple functional imaging studies involving a wide range of numerical tasks points to the intraparietal sulcus IPS as a core region that involve in quantity manipulation However several additional brain areas such as frontoparietal and temporoparietal areas were found to be involved in numerical tasks Individuals with MD show deficits in a distributed set of brain regions that include the IPS fusiform gyrus in posterior brain regions and pre frontal cortex regions Similarly converging evidence indicate that the left hemisphere regions centered in the fusiform gyrus temporoparietal cortex and pre frontal cortex regions are strongly involve in typical reading and present lower activity connectivity or abnormal structure in RD Thus there is a meaningful neural overlap between reading and math Hence the authors can submit empirical studies on the role of several of brain regions that are involved in math and reading commonality and diversity both in the typical and a typical development Cognitive factors that play role in mathematics and reading and comorbidity between RD and MD There is a long lasting debate whether MD and RD originate from unique cognitive mechanisms or not Multiple cognitive processes are shared between reading and mathematics Therefore impairments in any one of domain general skills could conceivably play an important role in both pure and comorbid conditions Moreover it has been suggested that phonological processing has a significant role in some aspects of numerical processing such as retrieval of arithmetical facts Education it will be interesting to look at the effect of interventions that aim to improve reading such as phonological awareness and there transfer effect on improving mathematical processing Alternatively it will be good to test whether math interventions will improve reading
