Kurtz, 1990-09-24 International experts present the latest vital information on long range transport of pesticides This book includes sources of pesticides from lakes oceans and soil circulation on global and regional basis deposition and fate of pesticides An ACS Division of Agrochemicals book and Environmental Chemistry book

Criteria for Atmospheric Long-range Transport Potential and Persistence of Pesticides and Industrial Chemicals Andreas Beyer, Michael Matthies, 2001 [Fate of Pesticides in the Atmosphere: Implications for Environmental Risk Assessment](#) Harrie F.G. van Dijk, W. Addo J. van Pul, Pim de Voogt, 2013-04-17 Global pesticide use is currently estimated at approximately 2.5 billion kg per year Pimentel et al 1998 To be effective pesticides need to persist for a certain period of time However the longer their persistence the greater the potential for transport of a fraction of the amount applied away from the target area Pesticides are dispersed in the environment by water currents wind or biota Pesticides can directly contaminate ground and surface waters by leaching surface run off and drift Pesticides can also enter the atmosphere during application by evaporation and drift of small spray droplets that remain airborne Following application pesticides may volatilise from the crop or the soil Finally wind erosion can cause soil particles and dust loaded with pesticides to enter the atmosphere The extent to which pesticides enter the air compartment is dependent upon many factors the properties of the substance in question e.g. vapour pressure the amount used the method of application the formulation the weather conditions such as wind speed temperature humidity the nature of the crop and soil characteristics Measurements at application sites reveal that sometimes more than half of the amount applied is lost into the atmosphere within a few days Spencer and Clith 1990 Taylor and Spencer 1990 Van den Berg et al this issue

Abstracts, 1991 [Pesticides](#) Hamir S. Rathore, Leo M.L. Nollet, 2012-04-11 Pesticides play an important role in controlling pests that carry diseases and threaten crop production In recent years however there has been increased concern about the adverse impacts of pesticides and their degradation products on public health and the environment A considerable amount of work is being done to develop nonchemical methods of pest control but it is not yet feasible to dispense with the use of chemical pesticides Pesticides Evaluation of Environmental Pollution brings together in a single volume current knowledge on environmental pollution caused by pesticides It helps readers evaluate the effects that pesticide residues have in all compartments of the environment Featuring contributions by eminent scientists from around the world the book gives an overview of the fate and transport of pesticides and their degradation in the environment Detailing the sources concentration and hazards of residues it examines their effects in humans birds and mammals fish soil invertebrates soil microflora aquatic

invertebrates water milk products and more The book also addresses endocrine disrupting pesticides and explores biopesticides as alternatives to chemical pesticides A review of data on the potential hazards of pesticides this reference will be of interest to readers working in the areas of chemical crop protection and pollution management It adds a balanced perspective to the debate between those who think that pesticides should be banned and those who consider the continued use of large quantities to be necessary for the survival of humanity See also *Handbook of Pesticides Methods of Pesticide Residues Analysis* CRC Press 2009
