The Longevity Factor Richard A. Passwater, 1993 *Nutrition, Food and Diet in Ageing and Longevity* Suresh I. S. Rattan, Gurcharan Kaur, 2021-10-03 This edited volume is a compilation of 30 articles discussing what constitutes food for health and longevity. The aim is to provide up-to-date information, insights, and future tendencies in the ongoing scientific research about nutritional components, food habits, and dietary patterns in different cultures. The health-sustaining and health-promoting effects of food are certainly founded in its overall composition of macronutrients and micronutrients. However, the consumption of these nutrients is normally in the form of raw or prepared food from animal and plant sources. The book is divided into four parts and a conclusion and successfully conveys the well-established information and knowledge along with the personal views of a diversified group of researchers and academicians on the multifaceted aspects of nutrition, food, and diet. The first part reviews the scientific information about proteins, carbohydrates, fats, and oils, micronutrients, pro and prebiotics, and hormetins, along with a discussion of the evolutionary principles and constraints about what is optimal food, if any. The second part discusses various kinds of foods and food supplements with respect to their claimed benefits for general health and prevention of some diseases. The third part brings in the cultural aspects such as what are the principles of healthy eating according to the traditional Chinese and Indian systems, what is the importance of mealtimes and daily rhythms, and how different cultures have developed different folk wisdoms for eating for health, longevity, and immortality. In the fourth part, various approaches which are either already in practice or are still in the testing and research phases are discussed and evaluated critically, for example, intermittent fasting and calorie restriction, food-based short peptides, senolytics, Ayurvedic compounds, optimal food for old people, and food for the prevention of obesity and other metabolic disorders. The overarching aim of this book is to inform, inspire, and encourage students, researchers, educators, and medical health professionals thinking about food and food habits in a holistic context of our habits, cultures, and patterns. Food cannot be reduced to a pill of nutritional components. Eating food is a complex human behavior, culturally evolved over thousands of years. Perhaps the old adage, "we are what we eat," needs to be modified to "we eat what we are."

Diet and Cognitive Decline Francesco Panza, Vincent Solfrizzi, Antonio Capurso, 2004 The progressive ageing of the general population and the consequent increase of the number of old people has made the typical medical problems of aged people more frequently observed, and particularly the problems related to the ageing brain. This new book is an updated overview of relevant aspects of cognitive decline associated with ageing. Within the wide landscape of brain ageing, the authors reconsider the role of the main predisposing factors and risk factors on the development of various forms of mental decline, from mild cognitive impairment to dementia. The strength of this book is the large, updated overview of the most recent data of scientific literature regarding the role of genetic, metabolic, and environmental factors on the predisposition and onset of cognitive decline. Particular attention is paid to the dietary micro and macronutrients and to their possible role
