Newton's Forgotten Lunar Theory Nick Kollerstrom, 2000 Around the turn of the eighteenth century one of the most pressing practical scientific problems was accurate prediction of the moon's position Although Isaac Newton had hoped to solve this problem using the dynamic approach developed in Principia in 1687 he never succeeded in doing so Instead he reverted to an old fashioned kinematic theory using epicyclic motion A terse summary of the theory was published in 1702 by David Gregory as part of his *Astronomiae elementa* The present work includes Newton's full text with annotations explaining terms and relating the text to Kollerstrom's analysis In this detailed study Kollerstrom solves the enigma of Newton's forgotten lunar theory He ascertains for the first time ever just what Newton's theory did and did not achieve Amazon

The Last Man Who Knew Everything Andrew Robinson,2023-05-09 No one has given the polymath Thomas Young 1773 1829 the all round examination he so richly deserves until now Celebrated biographer Andrew Robinson portrays a man who solved mystery after mystery in the face of ridicule and rejection and never sought fame As a physicist Young challenged the theories of Isaac Newton and proved that light is a wave As a physician he showed how the eye focuses and proposed the three colour theory of vision only confirmed a century and a half later As an Egyptologist he made crucial contributions to deciphering the Rosetta Stone It is hard to grasp how much Young knew This biography is the fascinating story of a driven yet modest hero who cared less about what others thought of him than for the joys of an unbridled pursuit of knowledge with a new foreword by Martin Rees and a new postscript discussing polymathy in the two centuries since the time of Young It returns this neglected genius to his proper position in the pantheon of great scientific thinkers

Yoos,2015-01-01 Simplifying complexity explores how to eliminate ignorance which in the view of the author is the purpose of the sciences and technologies and their consequent developments More specifically the book deals with the plurality of the sciences and technologies It is about the way in which each of them develops around the prosthetics of printed languages and the models used as visual aids to help us create new modes of communication to understand and solve human problems Consequently the task is to simplify the complexity that we find in different sciences both social and physical In his collection of essays George E Yoos surveys a number of different models that have evolved from the innate biological forms of grammar logic and modes of orientation He investigates the evolution of socially constructed systems of numeracy and measurement that have evolved and developed in different languages for the use in scientific and technological communication He identifies methods

derived from three distinct personal experiences the use of types of prosthetic mnemonic and attention controlling devices in order to yield simpler perspectives of complex states of affairs George E Yoos emeritus professor is a legend in the field of rhetoric Founder and editor of the Rhetoric Society Quarterly 1972 1985 author of Reframing Rhetoric 2007 Politics and Rhetoric 2009 and fellow of the Rhetoric Society of America **The New Face of War** Bruce D.
